U.S. Policy on the Problems of International Debt

This article was prepared by Edwin M. Truman, Staff Director, Division of International Finance, Board of Governors of the Federal Reserve System. It is adapted from a paper presented at a conference sponsored by the University of California at Berkeley/Stanford University, Joint Center for Latin American Studies, at the University of California at Berkeley on April 27–28, 1989.

The international debt problems of developing countries in the 1980s have been serious and complex. It is tempting, nevertheless, to seek simple, universal solutions to those problems. I believe that we must resist that temptation, for several reasons.

First, international debt problems are sufficiently complex, and the developing countries are sufficiently different, that it is inappropriate to speak of a single policy.

Second, U.S. policy in this area has been evolutionary. Even for an individual borrowing country, tomorrow's policy approach may well differ from today's, just as today's approach differs from yesterday's—or from the one last year or in 1982.

Third, U.S. policy on international debt is a responsibility that is shared within the U.S. government: the Treasury Department, the State Department, the White House, the Congress, and the Federal Reserve are all involved in the formulation of various aspects of that policy, and its implementation involves an even longer list of institutions. Moreover, the United States cannot dictate policies in this area because the problems of international debt are global in scope, affecting the interests of many developed countries around the world as well as many developing countries.

For all these reasons, this article does not attempt to present the definitive statement about U.S. policy on these problems. Rather, I offer some perspective on where we have been, where we are, and where we might be going. I make three basic points.

First, developing countries, the governments of creditor countries, the international commercial banks, and the international financial institutions have a substantial common interest in seeking cooperative, constructive, and innovative approaches to handling the debt problems of the developing countries. The benefits associated with cooperative approaches are overwhelming; they extend beyond the direct benefits for the countries and their lenders to benefits that can only be shared—a prosperous world economy and a stable financial system. Government has the responsibility to emphasize that common interest and to nurture cooperative approaches.

Second, though it has been uneven and disappointing, significant progress has been made over the past seven years in dealing with international debt problems and the associated economic and financial problems of the developing countries. In my view, insufficient attention has been paid to, and insufficient credit has been given for, this progress.

Third, U.S. policy in this area will continue to be evolutionary. Secretary of the Treasury Nicholas F. Brady put forward some "ideas and suggestions" on March 10, 1989; these ideas were refined during the international meetings at the beginning of April and were embodied in guidelines approved by the Executive Boards of the International Monetary Fund and World Bank in May and June; they are in the process of being exploited by Mexico and the Philippines; and they will continue to be refined. Moreover, even if Secretary Brady's initiative galvanizes progress beyond our wildest dreams, I suspect that the problems of international debt, and the implications of those problems as they unfolded in the 1980s, will still be with us at the end of this century. Indeed, it is fair to say that such problems have been with us since the first international loans were made many centuries ago.

WHERE HAVE WE BEEN?

It is precisely because international debt problems are and always have been with us, as well as because U.S. policies with respect to them have been evolutionary, that it is useful to look back briefly at how these problems have evolved over the 1980s and what the responses to them have been.

I believe that the proximate cause of the international debt problems of the 1980s lies in the changes in the environment of international lending in the early 1980s: recession in the industrial countries, deterioration in the terms of trade of the borrowing countries, and increases in nominal and real interest rates. These changes were part of a worldwide process of disinflation that began in the late 1970s but did not become a generally recognized feature of the international economic environment until several years later.[1]

Among the more fundamental causes of the international debt problems of the 1980s were the extent of lending by commercial banks around the world to developing countries;[2] failure on the part of the leaders of the borrowing countries to recognize that a day of reckoning (which could be defined in terms of a return to positive real interest rates) was inevitable; and the inappropriate macro- and microeconomic policies that many of these countries followed at the time.

In a recent study, Steven Kamin, Robert Kahn, and Ross Levine have analyzed how the interaction of heavy international borrowing from commercial banks, the economic policies of the borrowing countries, and the external economic environment during the 1970s and 1980s affected real gross domestic product per capita in Argentina, Brazil, Chile, and Mexico.[3] They did so by comparing the actual level of GDP per capita in 1987 (the "present" in their study) with what the level would have been under three sets of hypothetical circumstances. Their results suggest the following conclusions.

First, each of these countries benefited from external borrowing in the 1970s in the sense that, at its pre-crisis peak, real GDP per capita was 4 percent to 16 percent (Mexico and Chile respectively) above the level it would have been if the rate of real external borrowing had remained unchanged from 1975 to 1987 and if the funds had been used as efficiently as the actual borrowing was used.[4]

Second, under the same assumptions, three of the four countries (the exception is Argentina) would have been better off in 1987, both absolutely and relative to the simulated pre-crisis peak level, if they had borrowed less in the 1970s and early 1980s. The reasons are the abrupt change in access to international capital markets in the early 1980s and the ex post change in the terms of access before the crisis—the rise in international interest rates in real terms. Argentina is an exception because weakness in agricultural exports held real GDP per capita below the actual and simulated pre-crisis peak level and because a return of flight capital after the Austral plan in 1985 boosted the actual level of real GDP per capita in 1987 above the simulated level.

Third, the countries would have been better off in 1987 if their external borrowing, at the actual rate or at the hypothesized reduced rate, had been used as efficiently as their borrowing had been before the buildup of external debt in the

1. For a more extensive treatment of the origins of the international debt problem, see Edwin M. Truman, "The International Debt Situation," International Finance Discussion Paper 298 (Board of Governors of the Federal Reserve System, December 1986).

2. Official encouragement to the private commercial banks to deal with the "recycling" problem in the 1970s was not a major cause of the international debt problem. The proportion of the OPEC surplus that was actually recycled through the banking system was very small, judging by data on the liabilities of commercial banks to the OPEC members, especially to the so-called low absorbers, whose surpluses were more permanent.

3. Steven B. Kamin, Robert B. Kahn, and Ross Levine, "External Debt and Developing Country Growth," International Finance Discussion Paper 352 (Board of Governors of the Federal Reserve System, May 1989).

4. Efficiency is measured in terms of incremental capital–output ratios and, along with capital flight, is assumed to be a function of the quality of economic policies. However, it was assumed that capital flight would have been reduced proportionately with the volume of international lending.

1970s. Even if they had sustained this higher level of efficiency of investment, the countries would have been as well off (Argentina) or better off (the other three countries) in 1987 with the hypothesized lower (but steadier) rate of external borrowing than with the actual level of borrowing because of the increased real cost of the larger external debt in the late 1980s.

Such generalizations aside, these four countries, and many others in Latin America, experienced severe external debt crises in the early 1980s. However, though the problems were similar, the circumstances of each country as it encountered the crisis were quite different. These differences were one reason for adopting the so-called case-by-case approach to the international debt problem. In practice, of course, that approach has proved to be less flexible than the descriptive words suggest, to the considerable frustration of all involved. The approach was implemented using a common overall framework consisting of four elements:

1. Appropriate adjustments in economic policies by the borrowing countries.
2. Restructuring of existing debts to commercial banks and continued lending by the banks to the borrowing countries on a concerted basis.
3. Official bridge financing, in some cases, while the economic adjustment and financing programs were assembled.
4. An increase in the financial resources of the International Monetary Fund in 1983; the Fund was destined to play a central role in the overall process.

It was understood that the countries' adjustment efforts would founder in the absence of improvements in the economic environment in the industrial countries. Bilateral official credits, which were a relatively small proportion of the total debt of most of the heavily indebted, middle-income developing countries, were in most cases rescheduled in the Paris Club.

During the crisis period of 1982–83, the various parties with an interest in the international debt situation worked together very harmoniously. They had their differences, of course, but under the watchful eye of IMF Managing Director Jacques de Larosière, the borrowing countries adopted economic adjustment programs; the commercial banks supported those programs through concerted "new money" loans and rescheduling of existing maturities; and the international financial community worked effectively together to support countries that adopted sound economic adjustment programs.

One key feature of the approach was that no party provided medium-term financing until all parties were ready to do so. This was the policy requiring a "critical mass" of financial support from the commercial banks and creditor governments. It was designed to reinforce the IMF's longstanding policy that, prior to its own disbursements, the Fund should have appropriate assurances that a program it supported financially would be adequately financed overall. This policy with respect to medium-term financing was reinforced in a few critical cases by temporary bridge financing provided by the major industrial countries, normally in cooperation with the Bank for International Settlements.

By early 1985, remarkable progress had been made in dealing with international debt problems; the immediate crisis was over. However, the underlying economic and financial problems of the borrowing countries were by no means resolved. Economic recovery stalled in the developing as well as in the developed countries. Tensions mounted as international pressures for continued external adjustment by the borrowing countries came into conflict with the natural desire of those countries to resume economic growth in an environment in which their political leaders could respond principally to the demands of their own citizens. Moreover, the international commercial banks were increasingly reluctant to continue lending on a concerted basis even to countries making strong efforts at economic reform.

For these reasons, James A. Baker III, then Secretary of the Treasury, sought to breathe new life into the process through his call for a Program for Sustained Growth, presented in Seoul in October 1985. That program envisaged a continuation of efforts at economic reform, but in the context of a resumption of economic growth. He called for the international commercial banks to supply new lending of 2½ percent to 3 percent per year above the outstanding indebtedness to a group of fifteen heavily indebted, middle-income developing countries during 1986–88. He also advocated an enlarged role for the World Bank in promoting growth-oriented economic policies.

The Baker Plan, as it came to be called, was a plausible evolution of the efforts to deal with the international debt problems that had been brought on by the changes in the environment for international lending in the early 1980s. It also had some positive results, which I discuss below. However, the probability of its success was lowered by a change in the international economic environment shortly after it was announced: the collapse of international oil prices. This collapse meant that the oil-exporting developing countries had no firm basis on which to calibrate their economic policies and calculate their external financial needs. The oil-importing developing countries experienced a windfall as the cost of oil declined. This windfall weakened perceptions of the need to adopt economic policy reforms. The countries that were neither oil exporters nor oil importers were not sufficiently numerous to play a leadership role in a new phase of dealing with international debt problems. Therefore, by the time the Mexican program was developed in mid-1986, much of the momentum of the Baker initiative had been lost.

Where Are We?

A careful analysis supports the conclusion that the economic policies of the developing countries are substantially better today than they were in the early 1980s. The progress of reform has not been even. In a few countries little or none has been made. But, in the vast majority of the heavily indebted countries, economic policies have substantially improved: exchange rates are more competitive, real interest rates are positive, fiscal deficits (especially primary deficits) are narrower, subsidies have been eliminated, tariff policies are more rational, and recognition is widespread that the role of the public sector in the economy should be reduced and that market mechanisms and the private sector must be relied upon more heavily to generate sustained economic growth.

Moreover, in some countries economic performance has substantially improved. In four of the "Baker-15" countries—Chile, Colombia, Morocco, and the Philippines—economic growth averaged more than 4 percent per year in 1986, 1987, and 1988. (Venezuela did as well, but its growth was fueled by a rising budget deficit and a rundown of international reserves. Uruguay's growth averaged 4 percent per year, but it slowed sharply in 1988 and inflation accelerated.) In each of these countries, inflation was kept reasonably under control. In all four, the ratio of gross interest payments to exports of goods and services declined substantially. Ratios of external debt to exports of goods and services declined as well. In one case (Chile), the decline was dramatic (48 percent between 1985 and 1988); in the other cases, the decline was in the range of 15 to 20 percent over the same three years. Interestingly, for Brazil the decline in the ratio was 30 percent from 1986 to 1988, and the decline for Mexico was almost that sharp over the shorter period.

Despite some very positive accomplishments, the three years of the Baker initiative did not produce a breakthrough in economic growth or performance on the scale that was hoped for. One reason was that the economic reform efforts by the borrowing countries were less vigorous than has been envisaged when Secretary Baker laid out his ideas in Seoul.

One consequence of the shortfall in economic reform efforts was that many countries fell out of compliance with IMF-supported economic programs or declined to accept new programs; as a result, IMF disbursements declined. Over the period 1986–88, the IMF received net repayments of principal from the Baker-15 countries of about $3 billion. Because the Fund is a monetary institution whose lending is supposed to be repaid over a relatively short period so that the funds can be relent to other countries, such net repayments are viewed as a positive development if they are accompanied by real economic and financial recovery in the borrowing countries. Unfortunately, that was not the case during 1986–88.

A second consequence of the shortfall in economic reform efforts was a shortfall from anticipated disbursements by the multilateral development banks (MDBs). Secretary Baker had anticipated that MDB disbursements over the 1986–88 period would total $27 billion; in fact, they were about $22 billion—20 percent less than what had been expected. Moreover, in October 1985, it was anticipated that $27 billion in gross disbursements by the MDBs would translate into net disbursements of about $20 billion. In fact, net disbursements were about $10½ billion, barely half what had been expected. The explanation for the larger shortfall in net disbursements is that the dollar depreciated during 1986–87, raising the dollar value of repayments of non-dollar borrowing from the MDBs. The dollar's depreciation also contributed significantly to the increase in the dollar value of outstanding MDB and IMF claims on the borrowing countries and to a rise in the share of those institutions in the total outstanding debt of these countries relative to that of the commercial banks, a large proportion of whose claims are denominated in the U.S. dollar.

Secretary Baker in Seoul called for about $20 billion in net new lending by commercial banks to the fifteen heavily indebted countries during the 1986–88 period. It is very difficult to estimate with any precision the amount of this lending during this period. Clearly, however, it was substantially less than had been anticipated.

Total disbursements under concerted lending packages negotiated after 1985 were about $12½ billion during 1986–88. One way of assessing this figure is to ask what proportion such disbursements were of total scheduled interest payments to the commercial banks by the Baker-15 countries. The answer is about 21 percent; for the three major borrowers in Latin America (Argentina, Brazil, and Mexico), the figure was about 27 percent. That is, banks disbursed about two bits for every buck they received in interest. During the 1983–85 period, disbursements to the fifteen countries under concerted lending packages represented about one-third of scheduled interest payments; the figure was about 43 percent for the three major Latin American borrowers.

Some might argue that this declining coverage of interest payments is symptomatic of the progressive loss of consensus among the international commercial banks in support of the Baker Plan. From another perspective, one that recognizes that concerted lending is an unnatural process that at best mimics normal market practices, the declining coverage of interest payments might be viewed as progress. The important point is that the borrowing countries do not see it that way: they see an underfinancing and lack of appreciation of their economic adjustment efforts.

It is also important to recognize that Venezuela repaid a substantial amount of public sector debt during the 1986–88 period, and a few other countries repaid smaller amounts. Meanwhile, significant amounts of private sector debt were repaid or otherwise settled. Moreover, in 1987 and 1988, many commercial banks adopted strategies of aggressively reducing their exposures to the heavily indebted borrowing countries. For example, claims of U.S. banks on the Baker-15 countries dropped by about $16 billion, or almost 20 percent, during these two years. In most cases, these reductions in claims were at a discount, with the borrowing countries capturing a part of the discount.

Thus, debt reduction by international commercial banks has been going on for some time. In other words, the recent emphasis on debt reduction in U.S. policy can be viewed as representing a further step in the evolution of that policy and a recognition of what had already been occurring.

Overall exposures of U.S. and foreign commercial banks to the heavily indebted developing countries have declined dramatically—absolutely and relative to capital—since the outbreak of the debt crisis. For all U.S. banks reporting on the Federal Reserve's Country Exposure Lending Survey, exposure to the Baker-15 countries declined from 136 percent of capital in June 1982 to 54 percent in December 1988. On average for the nine large money-center banks, the ratio declined from 201 percent to 92 percent over the same period.

This very progress in reducing banks' exposures has helped diminish the sense of urgency among the commercial banks in dealing constructively with the continuing problems of the heavily indebted countries. This loss of urgency, in turn, was one of the many factors underlying the widespread perception that something new was needed to reinvigorate the process of dealing with international debt problems.

In my view, the situation in early 1989 had two other notable features: most of the progress that has been made in terms of economic performance (positive growth rates combined with moderate inflation) has been made by small countries; and external performance has been superior to internal performance.

It is worth considering this second factor in detail. External adjustment is easier to bring about than internal adjustment. All that is necessary for the former is that a country maintain a competitive exchange rate and reasonably supportive macroeconomic policies. However, unless the country gets its macroeconomic policies right, the result is very high real interest rates or very rapid domestic inflation or both. Thus, an important element of the overall adjustment process is getting the internal balance between savings and investment right. Given the limited scope for supply-side adjustments to take hold in the short run, achieving this balance usually means reductions in fiscal deficits or, in some cases, fiscal surpluses. Moreover, when the incompleteness of internal adjustment is manifested in rapid rates of inflation, it undercuts political support from the middle class for overall efforts at economic reform.

Where Are We Going?

It was against this background that Secretary Brady, on March 10, 1989, called for a revitalization of the debt strategy. His proposals built on the lessons and achievements to date.

He stressed the importance of economic growth, the crucial role of sound economic policies and policy reforms to achieve that growth, the continuing need of borrowing countries for external financial resources, and the case-by-case approach. At the same time, he recognized the need—which in some cases may be more political than economic—for voluntary debt and debt-service reduction, and he called on the international financial institutions (the IMF and the World Bank) to support such operations. However, he clearly stated that the resources available from these institutions for this or any other purpose are limited. He therefore called upon developing countries to adopt policies that would encourage the exploitation of alternative sources of external financing—the return of flight capital and the encouragement of direct foreign investment.

On March 16, following his return from a trip to Europe, the Federal Reserve issued a statement by Chairman Greenspan that is useful to quote:

> I fully support the principles put forward by Secretary Brady last Friday [March 10] for helping the heavily indebted developing countries to resolve their economic and financial problems: continued economic reform in order to achieve sustained economic growth; timely and adequate external financial resources to support economic development; and . . . voluntary debt reduction supported by the international financial institutions. The challenge ahead for all of us is to reinvigorate the process and to ensure that it works.

How are we—borrowing countries, commercial bankers, international financial institutions, and creditor countries—going to make this process work?

The initiative lies properly with the borrowing countries. Fortunately, and in contrast with the situation in 1986 after the start of the Baker initiative, some countries are ready to resume their efforts at economic reform or to build upon the progress already achieved. The list includes Mexico, the Philippines, Venezuela, Morocco, Costa Rica, and Uruguay. The readiness of the leaders of these countries to embark upon a new phase is an advantage, but their readiness also underlines the urgent challenge to the other participants in the process, particularly the commercial banks.

One problem is that some other countries, which do not need IMF financial support for their economic programs, face economic and political pressures to produce concrete results in their dealings with the international commercial banks and the international financial community. One such country is Colombia, whose "jumbo" refinancing loan was completed after more than a year of effort. Another is Chile, which has compiled an admirable record of economic reform and growth over the past several years but lacks the access to the international financial markets that these achievements might have been expected to open. It is important to find a way not to penalize countries like Colombia and Chile, but rather to reward them for their accomplishments. Chile, in fact, has turned to the Fund and World Bank for new programs to help finance a retirement (buyback) of its debt to commercial banks under a 1988 arrangement with the banks.

In another category are countries like Argentina and Ecuador that are struggling to implement programs of economic reform. The people and leaders of these countries must have a sense of hope and the confidence that they will not be left out of the reinvigorated debt strategy. Of course, the best way for a country not to be left out is to improve its efforts at economic reform and its actual performance, but that is easier said than done.

Another problem is unrealistic expectations about the scale of the assistance from the international financial community to those countries that are prepared to help themselves. The international financial institutions have limited resources to support debt- and debt-service-reduction operations.

The limited experience with such operations suggests, as a first approximation, that countries get what they pay for in such operations. If the secondary market price of a dollar of a country's debt is 40 cents, that country can use a dollar to buy back $2.50 of debt, saving about 25 cents (gross) in annual interest payments, assuming an interest rate of 10 percent; and it can save 15 cents net of the interest paid, or that otherwise could be earned, on that dollar. If, instead, it uses a dollar to enhance the principal or interest in an exchange offer, more of its old debt may be retired, but part will be replaced with new debt and the net interest saving will be about the same. This equivalence should not be surprising because in both cases the calculations assume that the borrower is offering cash, or collateral with a cash equivalent, in return for promised payments with the same present value to the marginal creditor. However, these types of approximations fail to distinguish between banks that are situated differently and, therefore, prefer different methods of debt or debt-service reduction and are prepared to act accordingly.

These types of calculations also assume that participation by lenders in debt- and debt-service-reduction transactions is voluntary in that the debtor cannot dictate the size of the discounts, "take it or leave it;" they also assume that lenders need not participate at all in this aspect of a financing package. This thought underscores the importance of maintaining as orderly and as businesslike a process as possible. Otherwise, what is now a positive-sum game, benefiting all participants, easily can turn into a negative-sum game, in which the borrowing country probably will be a loser along with most commercial banks and the rest of the international financial community. These calculations also suggest that voluntary debt- or debt-service-reduction transactions, backed by limited funding from the international financial institutions, are likely to provide only limited, near-term cash-flow relief to the borrower. Thus, borrowers with large external financing needs will continue to need "new money" loans.

Another risk is that commercial banks may have unrealistic expectations about the financial support that is available from the public sector—the international financial institutions or bilateral lenders, like Japan—in connection with debt and debt-service reduction. Except when a bank is able to dispose of its debt in a cash buyback operation, commercial banks must expect to retain considerable risk on their books even if the probability of principal or interest payments on their claims has been enhanced.

As I noted earlier, commercial banks in different circumstances can be expected to have different preferences for methods of debt or debt-service reduction. Moreover, some banks will prefer not to engage in such operations at all unless they take the form of debt–equity swaps. In fact, for some borrowing countries, the majority of the banks (weighted by size of existing claims) may prefer to advance new money, or capitalize some or all of interest payments coming due, instead of participating in debt or debt-service reduction. Their preferences should be accommodated as well.

What about combining debt or debt-service reduction with new loans to the same borrower as part of a single financing package? Commercial bankers argue with considerable force that the two are incompatible; indeed, convincing a bank's board of directors to do both is not an easy task. However, as long as a bank expects to receive interest payments from a borrower in excess of any effective financing the bank provides through debt or debt-service reduction, a strong case can be made to support the recycling of a portion of those expected payments if the alternative would be to receive nothing at all.

Assuming that the borrowing country follows a sound program of economic reform that is supported by the Fund and the World Bank and recognizing the uncertain nature of projections of a country's need for external financing, the fundamental issue is whether that country's economic program receives external financial support adequate to enable it to meet its scaled-down obligations. One way to ensure that the program is adequately financed is to provide the maximum conceivable amount of debt or debt-service reduction. Under such an approach, the commercial banks would provide more than enough financing in the "fat years" to cover the "lean years." They effectively would provide less financing if they did less debt and debt-service reduction and provided fresh credits to cover the lean years. Moreover, the provision of fresh credit, especially on a conditional basis, would be a less permanent form of financing than debt or debt-service reduction.

Some argue that banks that take the new-money route, in whole or in part, impose a heavier debt burden on the borrowing countries and will not discharge their responsibility to assist the countries in debt or debt-service reduction. I would argue that what is most important is that a commercial bank help meet the borrowing country's overall financial needs viewed from a long-term perspective; the form of its participation is much less important.

The issue of "new money" is closely connected to the issue of the long-term external financing of the economic development of these countries. It should be clear that debt or debt-service reduction is an abnormal form of financing and that it has natural limits at the forgiveness of 100 percent of the claims. It should also be clear that yields of LIBOR plus $^{13}/_{16}$ percent on jumbo loans to a government with recent interruptions to debt service do not represent normal market access; the perceived risk associated with funds advanced by commercial banks through such arrangements is much higher than the risk that spread would cover. In the foreseeable future, most commercial banks are likely to limit their truly voluntary direct lending to developing countries to financing trade and small projects, primarily in the private sector. It is essential that the policies of bank supervisors on loan-loss reserves not discourage such lending, but it is not likely to produce large net flows to the countries that have experienced debt-servicing problems in the 1980s.

How, then, can these countries expect to finance development in the future? This is the central issue raised by Secretary Brady's speech to the Bretton Woods Committee in March. Aside from domestic savings, which one may hope will be employed more efficiently than in the past, and aside from limited financing from the multilateral development banks, the developing countries must look primarily to three external sources for financing: direct foreign investment, international capital markets, and the return of flight capital.

In the near term, direct foreign investment is probably the most promising source since the investor obtains a direct claim on assets in the country and can employ those assets to produce a real return. However, the climate must be conducive to such investments. "Climate" here means not only the rules governing access to the country and the repatriation of earnings but also the macroeconomic (and microeconomic) policy environment.

As for access to international capital markets, the yields implicit on commercial bank claims that are traded in secondary markets suggest that direct financing would be rather expensive today. However, for a few countries—Chile and Colombia come to mind—the yields are little higher than those on bonds of below-investment grade. Mexico recently raised $100 million through a bond placement with a yield of about 17 percent. Clearly, access to such markets offers the best long-term hope for private sector financing from abroad. A stable financial climate and a demonstrated record of servicing obligations are necessary to open such access.

In the meantime, the return of capital that domestic residents have sent abroad is a potential source of financing.[5] The permanent return of flight capital in substantial magnitude is likely to be a medium-term phenomenon, however, coming after macroeconomic stability has been reestablished but before full access to international capital markets has been achieved.

In summary, I believe that much has been accomplished in the past seven years in dealing with the multiple underlying problems included under the rubric of "the international debt problem." The economic policies of most of the borrowing countries have substantially improved; many of these countries have taken long strides toward sustained economic growth; a few may have reached it. The fresh appreciation of the crucial role of market forces and economic incentives by the leaders of these countries is impressive.

At the same time, I believe that we are engaged in what is, at least potentially, a positive-sum game. Both the borrowing countries and the commercial banks must continue to recognize this fact. It justifies a role for the public sectors of the creditor countries, acting primarily through the international financial institutions. It also imparts to the entire effort a sense of the consequences of failure and an associated sense of urgency.

5. It is important to appreciate that flight capital is difficult to measure and that links between measured capital flight and economic variables that are important to the development process, such as investment, are difficult to establish; see David B. Gordon and Ross Levine, "The Capital Flight 'Problem,'" International Finance Discussion Paper 320 (Board of Governors of the Federal Reserve System, April 1988). Nevertheless, in many developing countries some residents undeniably hold a substantial portion of their wealth abroad.

Industrial Production

Released for publication September 15

Industrial production rose 0.3 percent in August following revised increases of 0.1 percent in July and 0.2 percent in June. Almost all of the August gain is attributable to a pickup in the output of motor vehicles and parts and a rebound in coal mining following the end of most labor disruptions. Excluding motor vehicles, output of both consumer goods and business equipment was sluggish during the summer. At 142.4 percent of the 1977 average, the total index in August was 2.8 percent higher than it was a year earlier. Manufacturing output rose 0.2 percent in August, and capacity utilization in manufacturing, at 84.0 percent, edged down. Detailed data for capacity

utilization are shown separately in "Capacity Utilization," Federal Reserve monthly statistical release, G.3.

In market groups, the output of consumer goods was little changed in August with a rebound in the production of durable goods largely offset by a decline in output of nondurables. Automotive products posted significant gains as auto assemblies increased to an annual rate of 6.3 million units from a rate of 6.0 million units in July; production of consumer trucks also rose substantially. In August, production of home goods retraced more than half of July's loss mainly on the strength of a rebound in appliance production. In the nondurable consumer goods sector, small declines were widespread.

Total industrial production—Revisions

Estimates as shown last month and current estimates

Month	Index (1977=100)		Percentage change from previous months	
	Previous	Current	Previous	Current
May	141.6	141.6	−.1	.0
June	141.4	141.9	−.1	.2
July	141.7	142.0	.2	.1
August	...	142.4	...	.3

In August, business equipment rose 0.6 percent with about two-thirds of the gain related to growth in output of motor vehicles. Recently, most other major components of business equipment have slowed noticeably after having posted sizable gains, on balance, during the first half of this year. Output of construction supplies rose again in August but still remains below the recent high in January. Materials production, which weakened earlier this year, increased in each of the past two months. However, most of the August gain was attributable to the rebound in coal mining.

In industry groups, manufacturing output rose 0.2 percent in August as output of durable goods was boosted by strong gains in motor vehicles and steel. Outside manufacturing, production in mining rose 2.3 percent, but output at utilities declined 1.0 percent.

Statements to Congress

Statement by Manuel H. Johnson, Vice Chairman, Board of Governors of the Federal Reserve System, before the Subcommittee on Financial Institutions Supervision, Regulation and Insurance of the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, September 19, 1989.

I am pleased to be here today on behalf of the Board to discuss the state of the bank insurance fund and the adequacy of the supervisory framework for banking institutions. It may seem surprising to some that we find ourselves addressing the adequacy of that fund, after having just enacted major and costly thrift legislation that included provisions to strengthen both the bank and the thrift insurance funds. However, it is precisely because of the nature and severity of the problems experienced by thrift institutions, and the fact that the commercial banking system has, itself, gone through an exceptionally difficult period, that it is entirely appropriate that we do so.

The thrift legislation, Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA), includes numerous provisions and substantial financial resources that should strengthen both the nation's depository institutions and their federal deposit insurance programs. Only time will tell whether the funding provided is ample or will require future adjustments, but the resources already provided will permit the agencies to take decisive actions toward resolving problems that have already lingered too long. Stronger capital standards for thrift institutions, enhanced enforcement powers, and other actions should also improve the safety and soundness of the depository system, in general. Measures to increase insurance assessments on both thrift institutions and commercial banks should provide much-needed resources to rebuild the insurance funds and to reduce the likelihood that further taxpayer monies will be required to support either the bank or thrift fund. Additional proposals for improvements may emerge from the broad study of the deposit insurance system required by the thrift legislation.

I shall begin my comments with a brief overview of the condition of the commercial banking system and then draw from that assessment to evaluate the relative strength of the bank insurance fund. I will also discuss several elements that the Federal Reserve believes are essential to a sound deposit insurance and supervisory program. While I recognize that the subcommittee is also interested in issues affecting the credit union insurance fund, I will focus my prepared remarks principally on the banking industry, given the long-standing and important responsibilities of the Federal Reserve as a bank supervisor.

Developments Affecting Banking Risks

This decade has been a difficult and challenging one for the U.S. banking system. It began with the collapse of oil prices and back-to-back recessions that inflicted heavy damage on many business sectors and was associated with historically high and volatile interest rates. Increased levels of competition from both foreign banks and domestic nonbank firms, deregulation of interest rates, technological innovations, and a general blurring of distinctions between banking and securities markets have also forced virtually all U.S. banking organizations to respond to new competitive pressures and demands from the market. These, and other, events, together with excesses in both domestic and foreign markets, led, in some cases, to extensive losses in such areas as real estate and foreign lending. The high interest rates, combined with depressed commodity prices, also adversely affected many farming communities and led to record numbers of failures by midwestern banks.

Some of these problems remain. Lower oil prices and overbuilt real estate markets, resulting in part from excessive lending and investment practices, have created substantial problems in the Southwest for both banks and thrift institutions and have been a common factor in the failure of many of the institutions in that region. This sector could still strain the economic recovery of financial institutions in that area for years to come. Resolving the huge volume of assets of foreclosed thrift institutions could put pressure on certain segments of that real estate market for some time.

Elsewhere, real estate markets in the Northeast and in pockets of the Southeast have also shown growing signs of weakness during the past year. This factor, combined with the rapid growth of real estate development lending by banks in those areas, suggests that some new problems will appear there.

Problem loans to heavily indebted foreign countries remain a major area of concern for many of the nation's largest banking organizations, even though their exposures have declined in relative terms. As of March 31, 1989, claims on rescheduling countries of the nine most internationally active U.S. banks represented 101 percent of their primary capital (principally their equity and reserves). This relative exposure is down sharply from the 233 percent at the end of 1982, but is substantial, nonetheless. The improvement reflects, in part, efforts by banking organizations to strengthen their capital and reserve positions. However, some difficulties clearly remain, and we believe it is appropriate for these institutions to continue to take steps to assure that their reserve levels are consistent with the risk exposure in their loan portfolios. In contrast, most regional and superregional banks have virtually eliminated foreign exposure as a material factor affecting their financial health.

Growing exposure to highly leveraged borrowers, including involvement in leveraged buyouts and other highly leveraged financings, also has important implications for the risk profiles of banking institutions. Such transactions can be important vehicles for the necessary restructuring of some companies, and, in this way, may contribute to the operating efficiency and financial performance of U.S. businesses. Nevertheless, the higher debt levels and relatively lower equity cushions that characterize such transactions can also weaken the borrower's ability to withstand financial adversity and, other things being equal, can raise the level of risk in bank loan portfolios. This area is one that warrants particularly close attention by bank managers and supervisors alike.

Ultimately, however, it is the size and number of banks that fail or that require federal assistance that affects the deposit insurance fund, and those figures remain stubbornly high. More than 150 banks have already failed during the first eight months of this year, a pace that is similar to the record number set last year. Although the assets of this year's failed banks are significantly less than those at this time a year ago, at more than $25 billion they are still very large by historical standards.

Despite the picture I have painted, not all of the recent developments have been negative. Most of the largest and most severe problem institutions that loomed over us for months have now been addressed and, barring some further setbacks or shocks, should be resolved. They include what had been the six largest bank holding companies in Texas—each of which had numerous subsidiary banks. With conditions in the Midwest stabilizing and the worst problems in Texas apparently resolved, there is reason to believe that we may have "turned the corner" and might finally begin to see fewer and smaller bank failures in the future.

During the past year, banking industry earnings also rebounded sharply from the net losses of 1987, which were caused when the larger banks created their special foreign debt reserves. As a percent of assets, last year's earnings of the 50 largest banking organizations were near their post-World-War-II highs and have remained strong through the middle of this year. Recent earnings of smaller companies are also generally strong. Capital at major banks has continued to improve, not only in preparation for new risk-based capital standards, but also in recognition by many banks and bank holding companies that their capital ratios had fallen too low. Much of the improvement has come through stronger earnings and lower dividend payout rates, while other gains have come from new equity issues. Higher capital cushions, as recognized by the Congress in passing FIRREA, are critical in enhancing the condition of individual institutions, promoting the stability of the banking system as a whole, and protecting the strength of the deposit insurance funds.

In short, the banking system is basically sound, but there remain some unresolved problems that could continue to put pressure on the deposit insurance system and the supervisory apparatus. These pressures will come from growing competition in capital markets and from continued financial innovations, as well as from persistent asset quality problems.

Strength of the Bank Insurance Fund

I should acknowledge at the outset that the easiest way to evaluate the adequacy of an insurance fund is in hindsight. We can examine the general condition of the banking system, assess trends and risks that have appeared, and compare existing resources and coverage ratios of the fund to those of the past. Except in extreme cases, however, there is no obvious procedure or magic figure that will indicate whether existing resources are adequate to deal with future unpredictable events. That said, I can offer some observations about the relative strength of the bank insurance fund.

The exceptional problems that the Federal Deposit Insurance Corporation has faced this decade have reduced the fund, relative to the size of insured deposits, to a historically low level. At the end of 1988, the fund equaled only 0.80 percent of insured deposits, which was sharply lower than the level the year before and extended the generally steady decline in the coverage ratio that began in the late 1950s. Currently at its lowest point in history, the coverage ratio is also well below the statutory target of 1.25 percent recently set by FIRREA. Even in absolute terms, the fund declined $4.2 billion during 1988 to $14.1 billion, and by year-end was at its lowest level since 1982, when insured deposits were roughly one-third lower. Continued large outlays this year have further reduced the fund's resources. It should be rebuilt as soon as possible, and fortunately, steps are already being taken to do that.

Under FIRREA, deposit insurance premiums for banks are scheduled to rise from the current 8.3 basis points of deposits to 12 basis points in 1990 and then to 15 basis points beginning in 1991. Applying the 1991 rate to midyear 1989 domestic deposits would yield an additional $1.4 billion annually of revenues for the fund, an amount equal to 10 percent of its balance at year-end 1988. Such future increases, matched with what should become declining payout rates, should do much to restore the fund to its traditional levels. It may still, however, be several years before that target is reached.

Meanwhile, we should recognize that recent events have demonstrated the strength of the bank insurance fund. The large number of failures we have witnessed, combined with the unprecedented size of the banks that failed, has tested the ability of both the fund and the bank supervisory system to deal with major problems. Throughout this trying period, the fund balance has remained substantial and capable of handling the difficult problems it has faced.

Deposit Insurance Reforms

While FIRREA takes several major steps toward improving the safety and soundness of the depository system, even its most ardent supporters recognize that it does not address a number of other significant reforms that might also be helpful. The act, therefore, mandated a major study of the deposit insurance system by the Treasury, in consultation with the depository institution regulatory agencies, the Office of Management and Budget, and private experts. This study, along with recommendations for any necessary administrative and legislative actions, is to be submitted to the Congress in early 1991. Concurrently, the General Accounting Office is required to conduct a study of the deposit insurance system.

The Board attaches considerable importance to these studies, and it intends to participate actively in the Treasury's effort. A review, at both a conceptual and practical level, is needed of the consistency of an insurance system that evolved out of the Great Depression, on the one hand, with today's deposit-gathering industry of both small institutions and giant modern financial services organizations that operate across markets and national boundaries, on the other. It will be a difficult task that will require considerable care.

It is obviously premature to judge the conclusions of the study, and I have no wish to do so. Nevertheless, this is a subject to which much thought has already been given, and I would like to discuss some key ideas that should receive attention.

The existence of a federal safety net for depository institutions—consisting of federal deposit insurance, the discount window, and guarantees of the payments mechanism—will inevitably lead some owners and managers of firms that benefit from the safety net to increase their willingness to expose their depositories to excessive risk. The problems raised by such actions are endemic to all insurance programs, public and private, and have been given a descriptive name: moral hazard risk. There are many ways for the insurer to reduce the seriousness of moral hazard risk, and since, as a practical matter, none of the means for controlling this risk is sufficient by itself, several strategies are typically employed.

In the Board's view, two components must be included in a program for controlling moral hazard risk in the deposit insurance system. First, the risk position of the insured institutions must be monitored and measured by the regulator on a timely and accurate basis. For depository institutions, this means that there are no substitutes for good accounting data and frequent on-site examinations of the financial condition of the insured depository. Only with timely and accurate data and the unique insights that can be gained on-site can informed decisions be made as to whether the depository is exposed to excessive risk and what corrective actions are needed. This strategy does not require that the depository be subject to detailed and onerous regulations in virtually every facet of its business. It does require, however, that the supervisor be well informed regarding the financial condition of the insured institution.

Second, owners and managers must be given as much incentive as is possible to control the risk exposure of their businesses. If private individuals have such incentives, then there is far less need and tendency for public supervisors to become regulators and exert hands-on control of a depository institution. This, in turn, provides for maximum flexibility for depositories to respond to a dynamic financial environment while still not imposing unacceptable risks on the safety net.

Strong incentives for owners and managers to control risk are best achieved, we believe, by requiring that those owners who would profit from a depository institution's success have appropriate amounts of their own capital at risk. Capital acts as a buffer against unexpected shocks to a firm and thereby helps to insulate both individual firms and the depository system from risk. But more important for today's discussion, there is no better way to ensure that owners exert discipline on the behavior of their firm than to require that they have a large stake in that enterprise. Indeed, the need for larger cushions to absorb unexpected losses and for increased private incentives to monitor and control risk are the fundamental reasons why increasing the amount of capital in the insured depository institution system has been a major goal of Federal Reserve policy in the 1980s.

Appropriate public policies for controlling moral hazard would not eliminate bank failures nor would they put an end to supervisory mergers and acquisitions. Competitive pressures will continue and will likely increase. Various sectors of our economy and of the world economy will no doubt experience unexpected changes in supply and demand. There will always be some owners and managers whose fraudulent behavior or outright incompetence puts their institutions at peril.

The continuing need to deal with insolvent or nearly insolvent depositories suggests that other policies to control moral hazard and minimize the adverse effects of capital-impairing events may be desirable. One such set of policies, and a set that is to be examined in the Treasury study, are actions to be taken with respect to the recapitalization or closure of insured depositories whose capital is depleted to, or near the point of, insolvency. Surely the thrift debacle has taught us that allowing insolvent institutions to remain open by living off the safety net can easily lead to massive taxpayer costs, not to mention serious misallocations of credit and distorted competitive incentives. It may be that we need to establish a clearer and more automatic set of regulatory actions that will be taken as a depository institution's capital falls below established minimums. These actions should probably be increasingly severe as capital ratios decline, culminating in closure or recapitalization and new ownership and management. The point would be that as private owners take risks and cause their equity in the business to decline, they give up management discretion to the caretakers of the public interest who insure the institution. Such a policy would help to internalize to management the cost of exposing the safety net.

Other policies designed to harness private incentives to control risk also deserve serious consideration. These policies include various proposals for use of subordinated debt to impose greater market-like discipline, and risk-based deposit insurance premiums. With regard to risk-based premiums, without prejudging the issue, I would emphasize that it would be vital to make any such system consistent with the risk-based capital policies adopted by virtually all of the major industrialized countries in 1988.

Supervisory Measures

The implementation of any changes to the deposit insurance program, as well as the day-to-day maintenance of an effective supervisory framework, requires the timely detection of insolvent or near-insolvent institutions. For this reason, the Federal Reserve has long employed a number of techniques to maintain the quality and effectiveness of its supervisory activities, and recently has taken some additional steps to strengthen its supervisory program. Although I have alluded to some of these actions already, I believe it is useful to highlight a few in greater detail.

Capital adequacy. The Federal Reserve and the other U.S. banking agencies, as well, have long stressed the importance of strong capital positions for banking organizations. In establishing capital requirements and assessing capital adequacy, the Federal Reserve has endeavored to utilize asset valuations based upon realistic and reasonably current on-site examiner assessments of the credit quality of bank assets. Equally as important, it has been Federal Reserve policy to exclude or severely limit goodwill and other intangible assets when assessing commercial bank compliance with minimum capital standards.

Since the early 1980s, the banking agencies have employed supervisory guidelines for minimum levels of capital to total assets, and have generally encouraged banking organizations to operate above the minimum levels. Our efforts in this regard have extended beyond the examination process and into the administration of the Bank Holding Company Act and other banking laws. Specifically, we have expected banking organizations undertaking significant expansion to maintain strong capital positions, well above supervisory minimums, without significant reliance on intangibles.

One of the most recent and important steps that we and the other U.S. banking agencies have taken to strengthen bank capital is to adopt the new international risk-based capital standard, which will apply to banks of most major countries. That standard was designed to recognize the different levels of credit risk inherent in various types of bank assets and off-balance-sheet activities and also to lead to a more equitable basis for international competition. The new standard will be fully phased in by the end of 1992 and specifies an interim target for the end of 1990. It stresses the need for an adequate level of "core" shareholder funds, defined as common equity and perpetual preferred stock (net of goodwill), and limits the amount of loan-loss reserves that may be included in the total capital base. Still other risks that can affect a bank's financial health, such as interest rate exposure, are under review and may result in additional measures or refinements to the newly adopted risk-based standard.

Bank capital plays a critical role in protecting the deposit insurance system, both by absorbing losses and by giving bank investors the incentive to operate their institution in a safe and prudent way. These new risk-based standards should assist us in our effort to ensure that the banking system remains adequately capitalized.

On-Site Examinations. The Federal Reserve believes firmly that on-site examinations provide the best way to evaluate the true financial condition, including the asset quality and capital adequacy, of commercial banking organizations. As I have already suggested, only by making timely and realistic assessments of the credit quality of bank assets can a truly accurate measure of bank solvency and capital adequacy be derived. In addition, on-site examinations afford supervisors an ideal opportunity to assess directly the effectiveness of bank management, as well as the quality of the bank's internal operating practices and systems for monitoring and controlling risks.

Although reviewing periodic financial reports is also an important function, on-site examinations remain the cornerstone of our supervisory program. In this regard, it is the Federal Reserve's policy to examine all state member banks and bank holding companies with significant operations annually, either directly or in conjunction with state supervisory agencies. Problem institutions are examined more frequently and are subject to other more rigorous supervisory reviews.

Conditions of the past several years, in both the banking and thrift industries, have imposed significant pressures on our field examination resources. This year, in particular, our involvement in thrift institution examinations and closings has forced us to postpone the regular periodic examinations of some institutions that appear to be healthy and to limit the examination scope of others. While we can make such adjustments temporarily, we cannot do so for extended periods. Such actions would increase the possibility that problems could develop and grow without early detection. In light of these and other developments I have discussed in this statement, it is crucial that we continue to devote adequate resources to on-site examinations and other critical supervisory functions. It is also essential that we take any steps necessary to attract and retain qualified field examiners and supervisory personnel.

Other Supervisory and Regulatory Measures. Earlier this year, the Board reiterated its policy regarding loans to highly leveraged firms. Among other things, that statement stressed the importance of a thorough and independent assessment by the lender and re-emphasized the need to consider the strength of such borrowers under various economic conditions, including the possibility of an economic downturn. The policy also emphasized the need for senior bank management to put in place procedures to monitor the performance of such credits, as well as effective internal controls to limit bank exposures to individual or related borrowers and industries. Our view is that any loan whose repayment is not based upon identifiable sources of cash flow that are realistic in terms of *current*, as opposed to future or expected, economic conditions is speculative and could involve undue risks.

Leveraged buyouts and other highly leveraged financings may offer substantial benefits to the economy, and, when properly structured, should also be sound extensions of credit. However, as I have already mentioned, such credits can involve significant risks, and until we have more experience with these financings, the Federal Reserve plans to monitor these bank exposures carefully. We must obviously remain particularly sensitive to the potential effect of any possible economic slowdown on the ability of highly leveraged borrowers to repay their debts.

A number of other long-standing laws, regulations, and supervisory policies exist to limit bank risk-taking. In particular, the banking agencies enforce numerous statutes and regulations that establish limits, collateral requirements, and appropriate review and approval terms regarding loans to affiliated companies and bank insiders. These areas, where credit judgments might be more readily compromised, are also closely evaluated during on-site examinations. The Federal Reserve has a broad array of enforcement powers, including cease-and-desist authority and civil money penalties, which it has used to address violations of banking laws and regulations and to prevent unsafe and unsound banking practices. Recently enacted provisions of FIRREA should provide additional tools to limit bank risk-taking. Among other things, this legislation contains provisions that call for the implementation of minimum collateral requirements for real estate loans, the establishment of appropriate appraisal standards for real estate loans, the prohibition of the use of brokered deposits by troubled institutions, and the expansion and strengthening of the banking agencies' enforcement authority.

Organizational Structures. The final issue I will mention relates to the structure through which banking organizations should properly conduct any activities that carry risks not traditionally associated with banks, or activities that, as a matter of public policy, should not be supported by the federal safety net. The focus here is not on any specific banking powers, but rather on how best to limit risks to the federal safety net when distinctions between banks and other financial companies are becoming blurred. There are several organizational possibilities: (1) permit the bank to perform the activity directly; (2) permit the bank to perform the activity only indirectly through a subsidiary of the bank; or (3) require the activity to be conducted outside the bank in a separate subsidiary of the bank holding company.

As a rule, the Federal Reserve believes that the third approach provides the greatest protection to any affiliated bank(s) and, in turn, offers the most protection to the deposit insurance fund and to the federal safety net more generally. Isolating such activities in subsidiaries of banks, the second option, seems to offer only limited protection to the bank, since any problems of the subsidiary would be transmitted immediately to the consolidated financial statements of the parent bank. That bank subsidiary structure also seems more vulnerable to legal challenges by creditors of the subsidiary to "pierce the corporate veil" and attach assets of the parent bank.

CONCLUSION

In summary, it is our view that the bank insurance fund has weathered a very difficult period and, while it remains sound, will benefit from the much-needed additional resources provided by FIRREA. Further changes and proposals for strengthening the deposit insurance system may come from the study required by that legislation. In our view, for the system to remain sound it must be governed by an adequate supervisory framework that strikes the proper balance between reasonable prudential rules, such as minimum capital standards, and an adequate on-site supervision and examination program. It is, of course, in the interests of both the Congress and the regulatory agencies to work in a cooperative fashion to establish all of the components necessary to protect the stability of our nation's financial system and the health of our deposit insurance funds. Much progress has been made with the enactment of FIRREA, and we look forward to working with the Congress on further necessary steps in the future. □

Statement by Manuel H. Johnson, Vice Chairman, Board of Governors of the Federal Reserve System, before the Subcommittee on Financial Institutions Supervision, Regulation and Insurance of the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, September 26, 1989.

I appreciate the opportunity to appear before this subcommittee to discuss the implications for U.S. financial institutions of plans by the European Community (EC) to complete its internal market at the end of 1992. These plans involve removing remaining internal barriers to the free circulation of goods, services, capital, and people. The actions are intended to exert downward pressures on costs and prices, and as greater competition fosters increased economic efficiency, to raise the level of output within the Community. Residents of other countries, including the United States, have an interest in how these events unfold because of their important trade and financial relations with the Community. A stronger European economy should benefit the United States and other nations that trade with Europe.

The moves to a barrier-free internal market by the European Community will, of course, be felt most profoundly by citizens and businesses of the Community. While the full impact of these actions will not be felt for a number of years, corporations in the Community have been actively engaged in planning the restructuring of their activities in anticipation of the new operating environment.

The current situation is one in which all tariff barriers within the Community have been dismantled for more than two decades. The elimination of intra-Community tariffs has contributed greatly to European economic prosperity, just as the absence of interstate barriers to trade has enhanced U.S. economic welfare. It is impressive that the European countries already have been able to achieve many of these same efficiencies associated with free trade, and will build further on these steps, within the context of sovereignty of the individual nation states.

The 1992 program focuses on removing remaining barriers to intra-Community trade that result from a variety of nontariff barriers, such as differences in national rules or laws regarding product standards. Such differences may effectively prohibit products made in one Community country from being exported to another. To deal with the remaining barriers to trade within the EC the Community has opted to apply the concept of "mutual recognition," whereby member states agree to respect the validity of each others' laws, regulations, and administrative practices that have not been harmonized at the Community level. In essence the member states have pledged not to use differences in national rules to restrict cross-border flows of goods and services.

The philosophy of mutual recognition adopted by the Community has been extended to the banking and financial sector through proposals for the creation of a "European financial area," which refers to both the free movement of capital and the establishment of a framework for a Communitywide market in financial services. Under this system, financial institutions chartered by any individual member nation will be deemed by other member states to be adequately supervised on a consolidated basis by their home country in accordance with requirements set forth in EC directives, and therefore will be permitted to branch freely throughout the Community without the need to seek approval or license from host-country regulatory bodies. The host country will, however, retain the right to establish regulations for such branches that are needed for the implementation of monetary policy, assuming such regulations are applied consistently to all banks operating in that country.

A feature of the new banking framework is that banks permitted by their home country to engage in a list of activities delineated in the Second Banking Directive would be permitted to engage in such activities anywhere in the Community, even if such activities were prohibited to locally chartered banks. For example, a bank permitted to underwrite and deal in corporate securities in its home country would be permitted to do so in any member state within the Community, even if local banks in a host member state were prohibited from such securities activities themselves. This explicit right of expanded activities for nonlocal banks, based on activities permitted in their home country, has no precedent in international banking. It will need to be monitored closely because it may have important implications for the types of European-based financial institutions that will emerge as major competitors with U.S. banks.

The implications for U.S. financial institutions of these important and innovative steps to integrate the financial sector of the European economy would appear to depend on the answers to at least three questions. First, what will be the impact on costs, margins, and profitability of financial institutions operating in the Community? Second, what types of financial institutions will evolve after the emergence of the European financial area as major competitors with U.S. banks in both European and worldwide financial markets, and how will these institutions differ from large U.S. banks? Third, what will happen regarding the right of entry and expansion for foreign-based financial institutions in the new operating environment in Europe?

Before discussing these three issues some background on the current situation and the scope of activities of U.S. banks in the countries of the Community might be helpful. As discussed in detail in the National Treatment Studies submitted to the Congress in 1979, 1984, and 1986, U.S. banks have generally been relatively free to enter and compete in the major European markets and have taken advantage of these opportunities. As shown in the attached table, as of December 1988, U.S. banks operated 149 branches in the countries of the Community with total assets of $130 billion.[1] On that same date, 17 U.S. banking organizations had majority-owned subsidiaries in Europe with total assets of $80 billion. These subsidiaries conduct banking activities and nonbanking activities of a financial nature. The nonbanking activities include underwriting debt securities and, under very narrow limits, equity securities, to the extent permitted by U.S. laws and regulations and where authorized by local law for affiliates of banking organizations. The major determinants of the decisions by U.S. banks to enter and participate in these markets appear to have been threefold: (1) to provide banking services to U.S.-based companies with major European operations; (2) to profit from opportunities where margins on local banking business are attractive, sometimes in an area where they had specialized expertise; and (3) to participate in the Eurocurrency and Eurobond markets that are primarily located in London.

The decision by the European Community to create a European financial area will certainly mean that the financial services sector within Europe will become more competitive, as low-cost producers of banking and other financial services are freer to enter and compete with higher-cost local firms that have operated in protected local markets. One study cited in a report by the Commission of the European Communities (the Cecchini report) used estimates of the costs of providing financial services in the four lowest-cost countries as a rough benchmark for how far intermediation costs might fall following integration, and concluded that intermediation costs might decline on the order of slightly more than 10 percent in the Community after integration. Analysts may disagree with the methodology used in that study, and its quantitative results may be biased by cases in which the estimates of lowest costs contain observations with an element of a cross-subsidy. However, it seems reasonable to conclude that margins and profits in local European banking will be reduced because of greater direct competition or because of potential competition from outside banks who will be free to enter if margins and profits in local markets are particularly attractive.

Some European banks are reacting to these expected developments by mergers, acquisitions, and strategic operating alliances through banking groups, all of which should result in some operating efficiencies. These developments will mean reduced profit margins on certain types of business for European offices of U.S. banks as well as for local banks. While some U.S. banks may compete aggressively in the broader European market, several U.S. banks have already announced their decisions to restructure their activities in that market and, on balance, the expected reduction in profit margins on banking in Europe should result in some further consolidation and retrenchment by U.S. banks in their European operations.

The retrenchment by some U.S. banks in response to lower profit margins may take place over a relatively short period of time. Over the longer run, the reduced margins on banking that are expected to occur in Europe may actually induce some European banking organizations to restructure their activities, and it is indeed possible that some will devote greater resources to expanding their banking activities here in the United States as well as in other markets outside Europe if these markets are perceived to offer better returns. Declining profit margins on financial intermediation that result from greater competition in Europe, while painful to banks and their shareholders, are of direct benefit to the broader market of consumers of banking services and constitute a large part of the expected efficiency gains from the further integration of the European market.

The second issue confronting U.S. financial institutions is the types of indigenous competitors that will emerge within the European Community. Banks in several European countries are permitted wider powers than U.S.-based banks, including the ability to underwrite both debt and equity securities on an unlimited basis directly within the bank without having to establish sep-

1. The attachments to this statement are available on request from Publications Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

arate holding-company affiliates whose activities are restricted and separated from the banks by firewalls. The plans by the Community to allow banks established in member states to provide certain services throughout the Community that are permitted in their home country, even if prohibited to domestically chartered banks in a specific host country, should create pressures for some of the more restrictive member states of the Community to liberalize their banking laws and regulations in these areas. This process is well understood by the member states and is referred to as regulatory convergence.

The ultimate result of this process of regulatory convergence is difficult to predict at this stage. To some degree it seems likely that U.S. banks will be confronted with competition from several of the large well-capitalized banks based in Europe that will be able to offer a broader range of financial services to their customers. This structure will differ markedly from our own structure in the United States. We have either prohibited institutions that accept deposits from the public from engaging in certain types of activities, or permitted some of them only through holding company affiliates with firewalls between the banking and nonbanking activities. The reason for the firewalls applied between U.S. banks and their domestic securities affiliates is to ensure that the federal safety net is not extended to these affiliates and that bank holding company affiliates do not have an unfair competitive advantage vis-à-vis their unaffiliated competitors.

Outside the United States there is a different statutory basis for U.S. bank activities. Abroad, U.S. banks are permitted to engage in banking and nonbanking activities, including, as I have already stated, debt underwriting and very limited equity underwriting, through subsidiaries of Edge corporations that are in turn subsidiaries of the bank or through subsidiaries of the parent holding company. Subsidiaries of the bank may engage in nonbanking activities only to the extent that the Board finds the activities to be closely related to banking or other financial activities. This standard imposed by the Edge Act was intended to allow U.S. banks to compete effectively abroad; however, the Board has not allowed U.S. banking organizations to engage in activities abroad that could present undue financial risk or otherwise potentially harm the safety and soundness of the banking institution.

The resolution of this evolving divergence between the United States and Europe regarding permissible activities for banking organizations that operate behind an explicit or implicit taxpayer supported safety net is uncertain. Over the foreseeable future major U.S. banks will be competing on a worldwide basis with large European banks that will be able to conduct a broad-based securities business and will have greater flexibility than U.S. banks to own shares of nonfinancial companies. Until the consequences of this disparity are better understood, we should not lose sight of the fact that our own supervisory policy of separating the deposit side of banking, with its safety net protection, from other kinds of financial businesses with different risks, has served this country well. On the other hand, we must be alert to any long-term competitive difficulties that it may pose for U.S.-based institutions as we consider and debate our own policies for broadening the range of permissible activities for U.S. banks. The Federal Reserve and other banking agencies will monitor the competitive situation carefully, here and abroad, and where necessary will draw upon our contacts with banking authorities in other countries for information.

The third issue for U.S. financial institutions, and the one that has drawn the most attention recently, is the conditions under which banks based in countries outside the Community, including U.S.-chartered banks, will be permitted to enter and expand into that broad market. As background to discussing this complex issue it should be noted that the United States has a policy of national treatment for banking that was established in the International Banking Act of 1978 (IBA). National treatment means providing foreign institutions the same competitive opportunities that are permitted to domestic banking companies.

The United States adopted that policy after careful consideration of various alternatives. We adopted that policy in the belief that it was equitable, that it would serve as a good example to other countries whose banking systems were not as open to foreign banks as our markets, and because we perceived the benefits to our own financial system of a dynamic participation by foreign-based banks.

This last reason, the unilateral benefits we as a nation of consumers of banking services derive from open markets, underlies our policy of not requiring reciprocal foreign treatment for U.S. banks. However, the Treasury, the Federal Reserve, and other federal banking agencies have been sensitive to the need to ensure that U.S. banks receive equitable treatment in foreign markets. The Congress has required that the Treasury, with the cooperation of other agencies, including the Federal Reserve, conduct and publish National Treatment Studies that highlight existing cases in which foreign countries restrain entry and expansion by nonlocal banks including U.S. banks. A new National Treatment Study is under way and will be completed in 1990. That study will contain a chapter analyzing the banking and securities markets in the European Community. Besides the National Treatment Studies, formal and informal contacts between U.S. banking officials and their counterparts in other countries have also been used as a vehicle to highlight problems of entry to local markets.

The results of the approach taken by the United States have generally been successful, both for the operation of our domestic banking and financial markets and for improving access for U.S. banks to foreign markets. U.S. offices of foreign-based banks have brought innovations to our domestic market, including pressures to price loans off market interest rates. Interbank deposit markets and foreign exchange markets in the United States have been deepened by foreign bank participation, and in some areas retail banking has become more competitive because of foreign bank participation.

In recent years a number of industrial countries have followed our example and have liberalized their laws and regulations concerning foreign bank access to their domestic markets. These liberalizations have occurred largely through a recognition of the need to improve their own domestic banking and financial markets, partly in recognition of the success of the U.S. experience. In some cases these liberalizations have followed constructive dialogues with U.S. and other foreign banking agencies.

The European Community has also had a lengthy debate about its treatment of foreign-based banks in the broad financial area that will be created by the measures scheduled to be implemented at the end of 1992. Our best reading of their intention is that the Community plans to adopt a policy of what is usually referred to as "reciprocal" national treatment on a Communitywide basis. Under that policy, countries offering national treatment to all Community-based banks will be offered national treatment for their banks throughout the Community. While less desirable than a policy of pure national treatment without any preconditions, the policy of reciprocal national treatment should not, if implemented fairly, present significant problems for U.S.-based banks because of our longstanding commitment to national treatment for foreign banks in the United States.

As we learned in our experience with the IBA, however, the concept of national treatment does not always provide simple answers to a number of complex policy issues when banking systems and structures differ widely across countries. One example arose when the Congress was confronted with adopting the statutory standard for the IBA for the nonbanking activities of foreign banks with U.S. operations. After a lengthy and complex debate, the Congress permitted nonbanking affiliates of foreign banking organizations to operate in the United States, even though U.S. banks are not permitted to have the same kind of domestic affiliations, to avoid an unintended application of U.S. law on an extraterritorial basis to banks chartered in countries that permit direct ownership by banks of nonfinancial companies.

A second example arose more recently in the requirement in the Primary Dealers Act of 1988 for the Federal Reserve to determine whether foreign countries offered U.S. securities firms the same competitive opportunities in government securities markets as are offered to domestic firms. The staff analysis on which the Board based its decision that U.S. firms are offered the same competitive opportunities in the government securities markets in Japan and the United Kingdom noted explicitly that "the concept of 'same competitive opportunities' does not require that every country adopt a structure for its government securities market that is identical to ours, any more than we should be required to adopt a banking structure identical to theirs."

One important lesson in both of these cases is that differences in national banking and financial structures can make determinations of national treatment and equal competitive opportunity very complicated. The second, and perhaps even more important lesson, is that different structures in foreign markets should not be used as an excuse for denying foreign banks equal competitive opportunity in a domestic market. In particular, restrictions on types of activities or geographic locations of banking offices adopted by the United States for reasons of public policy, and which apply to U.S. banks as well as to foreign-based banks operating in the United States, constitute national treatment and equal competitive access, and therefore are not reasons to restrict national treatment for U.S. banks abroad.

As a practical matter, major U.S. banking organizations are already well represented in the European Community through branches and subsidiaries, and access of many of them to the entire Community will be grandfathered through their subsidiaries. However, the structure of the ownership of banking in the United States is rapidly changing, and we are seeing the emergence of several active regionally based banking institutions in the list of our largest banks. Many of these institutions do not currently operate subsidiaries in the Community and their future access to that market is an important matter of public concern.

The question of access by foreign banks to the European financial area is coming at a critical time because services, including financial services, are included in the upcoming Uruguay Round of trade negotiations. These negotiations will involve a broad group of developing countries as well as the major industrial nations. We hope to utilize this important opportunity to achieve a liberalization of trade in financial services through a national treatment approach. That goal might be more readily achieved if a major precedent restricting the free flow of service trade were avoided. Because of our longstanding interest and expertise in this area, the Federal Reserve has been involved in developing the U.S. negotiating agenda for the forthcoming meetings on trade in financial services.

A final area that deserves mention is the implications of the plans by the Community for the post-1992 era for banking supervision. Over the last decade and a half bank supervisory issues have become increasingly international in scope. This is certainly appropriate as international banking and financial markets have become more integrated and as large banks conduct an increasing share of their activities in offices outside their home country and in foreign currencies. When possible, regulatory systems need to avoid competitive inequities, and bank supervisors need to be able to share information on a confidential basis. The Basle Committee of Bank Supervisors has performed these functions admirably. The recent agreement on risk-based capital standards achieved by that Committee, and scheduled to be fully implemented by participating countries by the end of 1992, is a major accomplishment in reducing one area of competitive inequity.

The movement toward a European financial area may well mean that additional pressure will be exerted within the Community for further harmonization of bank supervisory and regulatory practices. Decisionmaking in financial services generally may flow increasingly from individual national authorities within the Community to a Community-based body, just as it has in the case of commercial policy. This process appears to be under way already as bank supervisors from Community countries have been meeting regularly for several years. For U.S. bank supervisors, as well as bank supervisors from Japan, Canada, and other non-EC countries, this change may well mean that various issues discussed in the Basle Committee will have already been discussed by an EC body and that there will be a greater unity of positions taken by representatives of EC countries in meetings of the Basle Supervisors Committee.

In summary, the prospects for improved European integration offer potential benefits for non-European nations that trade with the Community as well as for the member states. Whether these potential benefits are realized depends on whether the measures are implemented in a manner that is trade-creating or whether they are instead offset by restrictive measures directed toward firms in countries outside the Community. At present we do not anticipate any problems of access for U.S. banks into the Community, but the Federal Reserve and other agencies will monitor the situation closely. The reduction in profit margins in banking that is expected to occur in Europe will play a very important role in determining the nature of future activities of both foreign and local banks in that market. While I cannot predict exactly which activities will be found to be profitable by U.S. financial firms, I am confident that our financial service firms are capable of being competitive in that new environment. The Federal Reserve, together with the Treasury and the other federal banking agencies, will do our part to help to ensure that unfair impediments to U.S. firms will not occur or persist. □

Announcements

Regulation Y: Amendment

The Federal Reserve Board announced on September 5, 1989, that it had amended Regulation Y (Bank Holding Companies and Change in Bank Control) to allow bank holding companies to acquire savings associations in accordance with provisions of the Financial Institutions Reform, Recovery and Enforcement Act of 1989.

The amendment contains the following provisions:

- It permits acquisitions of healthy as well as failed or failing savings associations.
- It allows bank holding companies to acquire savings associations in any state, without regard to whether the holding company can operate a bank in that state.
- It does not impose operational or branching conditions on the operations of savings associations except for the requirement of the Bank Holding Company Act that they conform their activities to those permissible for bank holding companies.

The amendment is effective October 10, 1989.

Modifications to Section 20 Orders

The Federal Reserve Board announced on September 21, 1989, modifications in its orders authorizing bank holding company subsidiaries to underwrite and deal in bank-eligible securities consistent with section 20 of the Glass–Steagall Act.

The modifications accomplish the following:

- They raise from 5 to 10 percent the revenue limit on the amount of total revenues a section 20 subsidiary may derive from ineligible securities underwriting and dealing activities.
- They permit underwriting and dealing in securities of affiliates if the securities are rated by a nonaffiliated, nationally recognized rating organization or are issued or guaranteed by the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation, or the Government National Mortgage Association, or represent interests in such obligations.

Change in Board Staff

The Board of Governors announced that David J. Stockton has been promoted from Assistant Director to Associate Director in the Division of Research and Statistics, effective September 29, 1989.

Legal Developments

Final Rule—Amendment to Regulation Y

In light of changed economic and regulatory circumstances, and pursuant to discretionary authority granted under the Financial Institutions Reform, Recovery and Enforcement Act of 1989, the Board of Governors is amending 12 C.F.R. Part 225, its Regulation Y, to reflect its determination that the acquisition and operation of savings associations by bank holding companies is, as a general matter, so closely related to banking as to be a proper incident thereto for purposes of section 4(c)(8) of the Bank Holding Company Act ("BHC Act") (12 U.S.C. 1843(c)(8)). The Board's determination is subject to the condition that the savings association engage only in activities that bank holding companies are otherwise permitted to conduct under section 4 of the BHC Act. Specific proposals by bank holding companies to acquire savings associations would require prior Board approval under section 4(c)(8) of the Act.

Effective October 10, 1989, 12 C.F.R. Part 225 is amended as follows:

Part 225—Bank Holding Companies and Change in Bank Control

1. The authority citation for Part 225 continues to read as follows:

Authority: 12 U.S.C. 1817(j)(13), 1818, 1843(c)(8), 1844(b), 3106, 3108, 3907, and 3909.

Part 225—Bank Holding Companies and Change in Bank Control

2. In Section 225.25 new paragraph (b)(9) is added to read as follows:

Section 225.25—List of Permissible Nonbanking Activities

* * * * *

(b) * * *

(9) *Operating savings association.* Owning, controlling or operating a savings association, if the savings association engages only in deposit taking activities and lending and other activities that are permissible for bank holding companies under this subpart C.

3. In section 225.2, redesignate paragraphs (1) through (n) as paragraphs (m) through (o) respectively, and add the following as new paragraph (1):

Section 225.2—Definitions

* * * * *

(l) "Savings association" means:

(1) any Federal savings association or Federal savings bank;

(2) any building and loan association, savings and loan association, homestead association, or cooperative bank if such association or cooperative bank is a member of the Savings Association Insurance Fund; and

(3) any savings bank or cooperative which is deemed by the Director of the Office of Thrift Supervision to be a savings association under section 10(1) of the Home Owners Loan Act.

4. In section 225.126, paragraph (h) is removed.

Final Rule—Amendment to Rules Regarding Delegation of Authority

The Board of Governors is amending 12 C.F.R. Part 265, its Rules Regarding Delegation of Authority, to delegate to the Staff Director of the Division of Banking Supervision and Regulation the authority to approve applications requiring prior approval of the Board if immediate or expeditious action is required to avert failure of a savings association.

Effective September 18, 1989, 12 C.F.R. Part 265 is amended as follows:

Part 265—Rules Regarding Delegation of Authority

1. The authority citation for Part 265 continues to read as follows:

Authority: Section 11(k), 38 Stat. 261 and 80 Stat. 1314; 12 U.S.C. 248(k).

2. Paragraph (c)(3) of § 265.2 is revised to read as follows:

Section 265.2—Specific functions delegated to Board employees and to Federal Reserve Banks

* * * * *

(c) * * *

(30) Under the provisions of sections 3(a) and 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1842(a) and 1843(c)(8)) and the Change In Bank Control Act (12 U.S.C. 1817(j)) to take actions the Reserve Bank could take under paragraphs (f)(22) and (f)(28) of this section if immediate or expeditious action is required to avert failure of a bank or savings association, or because of an emergency.

* * * * *

Orders Issued Under Bank Holding Company Act

Orders Issued Under Section 3 of the Bank Holding Company Act

National City Corporation Cleveland, Ohio

Order Approving the Acquisition of a Bank Holding Company

National City Corporation, Cleveland, Ohio ("National City"), a bank holding company within the meaning of the Bank Holding Company Act of 1956 ("BHC Act"), has applied for the Board's approval pursuant to section 3(a)(3) of the BHC Act (12 U.S.C. § 1842(a)(3)) to acquire 100 percent of the voting shares of Crestwood Banking Company, Ltd., Crestwood, Kentucky ("Crestwood"), and thereby indirectly acquire Crestwood State Bank, Crestwood, Kentucky ("Bank").[1]

Notice of the application, affording interested persons an opportunity to submit comments, has been published (54 *Federal Register* 26,842 (1989)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the BHC Act.

National City operates 16 banking subsidiaries located in Ohio, Kentucky, and Indiana. National City is the second largest commercial banking organization in Kentucky, controlling approximately $3.3 billion in deposits, representing 12.2 percent of the total deposits in commercial banking organizations in the state.[2] Crestwood is the 98th largest commercial banking organization in Kentucky, controlling approximately $54.4 million in deposits, representing less than one percent of the total deposits in commercial banking organizations in the state. Upon consummation of this proposal, National City would remain the second largest commercial banking organization in Kentucky, controlling $3.4 billion in deposits, representing 12.4 percent of the total deposits in commercial banking organizations in the state. Consummation of this proposal would not have a significant adverse effect on the concentration of banking resources in the state.

National City and Crestwood compete directly in the Louisville banking market.[3] National City is the second largest of the 15 commercial banking organizations in this market, controlling approximately $2.6 billion in deposits, representing 29.2 percent of the total deposits in commercial banking organizations in the market.

Crestwood is the ninth largest commercial banking organization in the market, controlling approximately $54.4 million in deposits, representing less than one percent of total deposits in commercial banking organizations in the market. Upon consummation of the proposal, National City would remain the second largest commercial banking organization in the market, controlling $2.7 billion in deposits, representing 29.8 percent of the total deposits in commercial banking organizations in the market. The Herfindahl–Hirschman Index ("HHI") for the Louisville banking market would increase by 35 points to 2657.[4]

---

1. In connection with this application, National City's subsidiary, First Kentucky National Corporation, Louisville, Kentucky ("First Kentucky"), has formed CSB Acquisition Corporation, Louisville, Kentucky ("CSB"), for the purpose of acquiring Crestwood, and thereby indirectly acquiring Bank. First Kentucky has filed an application to acquire shares of a bank holding company pursuant to section 3(a)(3) of the BHC Act, and CSB has filed an application to become a bank holding company pursuant to section 3(a)(1) of the BHC Act.

2. State banking data and market banking data are as of June 30, 1988.

3. The Louisville banking market is approximated by the Louisville RMA adjusted to include Jefferson and Oldham Counties in Kentucky, and Clark and Floyd Counties in Indiana.

4. Under the revised Department of Justice Merger Guidelines, 49 *Federal Register* 26,823 (1984), a market in which the post-merger HHI is above 1800 is considered highly concentrated. In such markets, the Justice Department is likely to challenge a merger that increases the HHI by more than 50 points. The Justice Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anti-competitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by at least 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anti-competitive effects implicitly recognizes the competitive effect of limited-purpose lenders and other non-depository financial entities.

Accordingly, based upon a review of all of the facts of record, the Board concludes that consummation of this proposal would not have a significantly adverse effect on competition in any relevant market. In addition, the financial and managerial resources of National City, Crestwood, and their respective subsidiaries are consistent with approval.

In considering the convenience and needs of the communities to be served, the Board has taken into account the record of National City's subsidiary banks under the Community Reinvestment Act ("CRA"). The CRA requires the federal financial supervisory agencies to encourage financial institutions to help meet the credit needs of the local communities in which they operate, consistent with the safe and sound operation of such institutions. To accomplish this end, the CRA requires the appropriate federal supervisory authority to "assess an institution's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the institution," and to "take this record into account in its evaluation of bank holding company applications."[5]

In this regard, the Board has received comments filed by an individual ("Protestant") critical of the CRA performance of National City's subsidiary bank, The First National Bank, Dayton, Ohio ("FNB"). Protestant alleges that FNB has shown a lack of commitment to low- and moderate-income minority neighborhood markets in the Dayton, Ohio area. In particular, Protestant asserts that FNB did a significantly smaller percentage of its mortgage business in low- to moderate-income and minority areas than to other lenders in Montgomery County, Ohio. National City has submitted a detailed response to the comments made by Protestant.[6]

The Board has carefully reviewed the CRA performance record of FNB, as well as Protestant's comments and National City's response to those comments, in light of the CRA, the Board's regulations, and the jointly issued Statement of the Federal Financial Supervisory Agencies Regarding the Community Reinvestment Act ("CRA Policy Statement").[7] The CRA Policy Statement provides guidance regarding the types of policies and procedures that the supervisory agencies believe financial institutions should have in place in order to fulfill their responsibilities under the CRA on an ongoing basis, and the procedures that the supervisory agencies will use during the application process to review an institution's CRA compliance and performance.

Initially, the Board notes that National City's subsidiary banks have each received satisfactory ratings from their primary regulators in examinations of their CRA performance. In addition, National City has in place the types of programs outlined in the CRA Policy Statement as essential to an effective CRA program. National City has established a Public Policy Committee in order to monitor the CRA initiatives and activities of its subsidiary banks. National City has also adopted a management policy that details the standards and responsibilities of each subsidiary bank to address the CRA. These standards require each of National City's subsidiary banks to maintain its own CRA program and to establish a management public policy committee at the bank and public policy committee for the board of directors. In addition, each bank must designate a CRA officer and assess the credit needs of each community through contacts with local officials and community organizations. Under this policy, the CRA officer of each of National City's subsidiary banks reports to the bank's board of directors, which annually reviews the bank's CRA record and CRA policy statement. Each CRA officer of each of National City's subsidiary banks is supervised by National City's corporate CRA officer, who in turn reports to National City's senior management.

In addition, FNB has a program to help meet the needs of its community as well as monitor the success of its efforts. Coordination and oversight of the CRA program at FNB is provided by the Management Policy Committee, which develops CRA initiatives and goals, and the Public Policy Committee of FNB's board of directors, which monitors and assists in the development of these initiatives, and which reports annually to National City. FNB seeks to ascertain the needs of the community through participation by its employees, officers, and directors in a variety of community organizations and activities. FNB also has a vice-president designated as its CRA officer. The CRA officer is responsible for making calls in the low- to moderate-income areas of Dayton, Ohio, to elected officials, realtors, clergy, and neighborhood leaders.

The CRA program implemented by FNB has a community outreach component that calls for ongoing community contact by departmental staff regarding the needs of the community and the products and services that FNB offers to meet these needs. The outreach component of FNB's CRA program includes advertising in traditional and minority-owned media. FNB has also contracted with a public relations firm which specializes in reaching minority markets in order to ensure that low- and moderate-income and minority areas are aware of the services that FNB offers.

5. 12 U.S.C. § 2903.

6. FNB has met with Protestant in an effort to clarify the issues presented under the CRA, although the parties failed to resolve all of their differences.

7. 54 *Federal Register* 13,742 (1989).

Protestant bases his comments on an analysis of property conveyance information rather than Home Mortgage Disclosure Act ("HMDA") data provided by regulated mortgage lenders.[8] An analysis of HMDA data for FNB for 1987 does not support the allegation that FNB falls significantly below its peers in residential lending to low- and moderate-income areas. While other lenders made 6.0 percent of their mortgage loans to individuals in low- to moderate-income areas in 1987, FNB also made 6.0 percent of its mortgage loans to individuals in low- to moderate-income areas.[9] Similarly, FNB's figure of 2.0 percent for mortgages in minority and integrated areas compares favorably with the 3.0 percent figure for all other lenders. With regard to home improvement loans, other lenders made 15.0 percent of their home improvement loans to individuals in low- to moderate-income areas, while FNB made 33.0 percent of its home improvement loans to individuals in low- to moderate-income areas. Likewise, FNB made 30.0 percent of its home improvement loans to individuals in minority and integrated areas, which greatly exceeds the 12.0 percent figure presented by all other lenders.

FNB has also begun offering FHA and VA government guaranteed mortgages in response to comments from realtors expressing a need for mortgages with lower down-payment requirements. In addition, FNB is an active participant in Small Business Administration loans. Moreover, the types of services and programs that FNB offers appear to be consistent with the purposes of the CRA. Such programs include loans for new home construction and purchase or rehabilitation of existing residences through three loan programs offered in conjunction with the City of Dayton Department of Housing; low interest loans for first time buyers through the Ohio Financing Agency's Series B and Series C First Time Home Buyer Program; and mortgage loans for renters that desire to purchase homes in conjunction with the Dayton Metropolitan Housing Authority. FNB is also active at both the city and county levels through participation in special loan programs with CityWide Development Corporation, which is the economic development arm of Dayton, Ohio, and with County Corp, which is the economic development arm of Montgomery County, Ohio.[10] In addition, FNB has established the First National Bank Community Development Association ("FNBCDA"), which assists in the stabilization and revitalization of low- to moderate-income neighborhoods and minority areas in which FNB operates by providing loan and equity investments for low-income housing revitalization and development. Since its inception in November of 1987, FNBCDA has participated in over $2.8 million of community revitalization projects by assisting in the financing of projects for the purchase, construction, and renovation of housing in low- to moderate-income areas, and for the operation of small businesses.

For the foregoing reasons, and based upon the overall CRA record of National City and of FNB, the compliance of FNB's CRA statement with applicable regulations, and other facts of record, the Board concludes that convenience and needs considerations, including the record of performance under the CRA of National City, FNB and National City's other subsidiary banks, are consistent with approval of this application.

Based on the foregoing and other facts of record, the Board has determined that the application should be, and hereby is, approved. The acquisition of Crestwood shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Cleveland, acting pursuant to delegated authority.

By order of the Board of Governors, effective September 18, 1989.

Voting for this action: Vice Chairman Johnson and Governors Seger, Angell, Kelley, and LaWare. Absent and not voting: Chairman Greenspan.

JENNIFER J. JOHNSON
Associate Secretary of the Board

Security Pacific Corporation
Los Angeles, California

Order Approving the Acquisition of a Bank Holding Company

Security Pacific Corporation, Los Angeles, California ("Security Pacific"), a bank holding company within

8. The Board believes that the use of HMDA data provides a reasonable basis for determining National City's and FNB's lending records under the CRA and permits the Board to compare National City's and FNB's performance to other financial institutions.

9. Because Protestant's allegations relate to mortgage lending in Montgomery County, Ohio, the percentages used here reflect lending patterns in Montgomery County, Ohio, based on all HMDA lenders in Montgomery County, Ohio.

10. Protestant further alleges that FNB's recent community efforts may receive only short term support in order to permit National City to proceed with a series of acquisitions. While some of its programs are new, National City and FNB have had their current CRA programs in place since March 1987, and have taken steps to respond to identified community credit needs. The Board expects that National City will continue to fulfill its responsibilities under the CRA, and notes that, as with other financial institutions, National City's CRA performance will be reviewed in the course of regular examinations.

the meaning of the Bank Holding Company Act (the "BHC Act"), has applied for the Board's approval under section 3 of the BHC Act (12 U.S.C. § 1842) to acquire Southwest Bankcorp, Vista, California ("Southwest"), and thereby to acquire indirectly Southwest's subsidiary bank, Southwest Bank, Vista, California ("Bank").[1]

Notice of the applications, affording interested persons an opportunity to submit comments, has been published (54 *Federal Register* 20,921 (1989)). The time for filing comments has expired, and the Board has considered the applications and all comments received in light of the factors set forth in section 3(c) of the BHC Act.[2]

Security Pacific is the third largest commercial banking organization in California, controlling approximately $27.2 billion in deposits, representing 13.8 percent of the total deposits in commercial banks in the state.[3] Southwest is the 45th largest commercial banking organization in California, controlling approximately $289.8 million in deposits, representing less than one percent of the total deposits in commercial banks in the state. Upon consummation of this proposal, Security Pacific would remain the third largest commercial banking organization in California, controlling $27.5 billion in deposits, representing 13.9 percent of the total deposits in commercial banks in the state. Consummation of this proposal would have no substantial effect on the concentration of banking resources in the state.

Security Pacific and Southwest compete directly in the following five banking markets in California: Los Angeles, San Diego City, San Diego County, Hemet, and Oceanside.

In the Los Angeles banking market,[4] Security Pacific is the second largest commercial banking organization, controlling approximately $17.9 billion in deposits, representing approximately 20.6 percent of the total deposits in commercial banks in the market. Southwest is the 132nd largest commercial banking organization in the market, controlling approximately $41.7 million in deposits, which represents less than one percent of total deposits in commercial banks in the market. Upon consummation of the proposal, Security Pacific would remain the second largest commercial banking organization in the market, controlling approximately $18.0 billion in deposits, representing approximately 20.7 percent of the total deposits in commercial banks in the market. As a result of this transaction, the Herfindahl–Hirschman Index ("HHI") for the Los Angeles banking market would increase by 2 points to 1130.[5]

In the San Diego City banking market,[6] Security Pacific is the third largest commercial banking organization, controlling approximately $1.4 billion in deposits, representing approximately 12.7 percent of the total deposits in commercial banks in the market. Southwest is the 14th largest commercial banking organization in the market, controlling approximately $117 million in deposits, representing approximately 1.1 percent of the total deposits in commercial banks in the market. Upon consummation of this proposal, Security Pacific would remain the third largest commercial banking organization in the market, controlling approximately $1.5 billion in deposits, representing approximately 13.8 percent of the total deposits in commercial banks in the market. The HHI for the San Diego City banking market would increase by 27 points to 1112.

In view of these and the other facts of record, the Board has determined that consummation of this proposal would not have a significant adverse effect on competition in the Los Angeles or San Diego City banking markets.

In the San Diego County banking market,[7] Security Pacific is the fourth largest commercial banking orga-

1. Security Pacific plans to merge Southwest into Security Pacific's wholly owned subsidiary, SPC/CBSI Acquisitions, Inc., Los Angeles, California ("SPC/CBSI"), which is applying under section 3(a)(1) of the BHC Act to become a bank holding company. Security Pacific intends that within two weeks of this merger, SPC/CBSI would divest itself of its interest in Bank and cease to be a bank holding company, and Bank would be merged into Security Pacific National Bank, Security Pacific's lead bank.

2. Several insurance trade associations have requested that the Board postpone action on this application pending review by the Board of a petition for enforcement which alleges that Security Pacific, through Security Pacific State Bank, may attempt to engage in general insurance agency activities. Neither Southwest nor Bank engage in any insurance agency activities. Moreover, the issues raised by the petition are currently the subject of litigation (*Independent Insurance Agents of America, Inc. v. Board of Governors of the Federal Reserve System*, No. 89–4030 (2nd Cir. filed March 9, 1989)). Accordingly, the Board has determined that action on this application at this time is appropriate.

3. State banking data and market banking data are as of June 30, 1987.

4. The Los Angeles banking market is approximated by the Los Angeles RMA.

5. Under the revised Department of Justice Merger Guidelines, 49 *Federal Register* 26,823 (June 29, 1984), a market in which the post-merger HHI is above 1800 is considered highly concentrated. In such markets, the Justice Department is likely to challenge a merger that increases the HHI by more than 50 points. The Justice Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indication anticompetitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by at least 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anticompetitive effects implicitly recognizes the competitive effect of limited-purpose lenders and other non-depository financial entities.

6. The San Diego City banking market is approximated by the San Diego RMA.

7. The San Diego County banking market consists of those areas of San Diego County that are not included in either the San Diego RMA or the Oceanside RMA.

nization, controlling approximately $26.8 million in deposits, representing approximately 11.7 percent of the total deposits in commercial banks in the market. Southwest is the third largest commercial banking organization in the market, controlling approximately $31.1 million in deposits, representing approximately 13.7 percent of the total deposits in commercial banks in the market. Upon consummation of the proposal, Security Pacific would become the largest commercial banking organization, controlling approximately $57.9 million in deposits, representing approximately 25.4 percent of the total deposits in commercial banks in the market. The HHI for the San Diego County banking market would increase by 320 points from 1533 to 1853.

Although consummation of this proposal would eliminate some existing competition in the San Diego County banking market, five other commercial banks would continue to operate in the market. In addition, the Board has considered the presence of thrift institutions in this market. The Board has previously indicated that thrift institutions have become, or have the potential to become, major competitors of commercial banks.[8] In the San Diego County market, eleven thrift institutions control approximately 66 percent of total deposits in the market. Based upon the activities and market share of thrift institutions, the Board has concluded that thrift institutions exert a significant competitive influence that mitigates the anticompetitive effects of the proposal in this banking market.[9]

In the Hemet banking market,[10] Security Pacific is the largest commercial banking organization, controlling approximately $142.4 million in deposits, representing approximately 29.5 percent of the total deposits in commercial banks in the market. Southwest is the seventh largest commercial banking organization in the market, controlling approximately $16 million in deposits, representing approximately 3.3 percent of the total deposits in commercial banks in the market. Upon consummation of the proposal, Security Pacific would remain the largest commercial banking organization, controlling approximately $158.4 million in deposits, representing approximately 32.8 percent of the total deposits in commercial banks in the market. The HHI for the Hemet banking market would increase by 196 points from 1953 to 2149. The Board notes that five other commercial banks will remain in the market following consummation of this proposal. In addition, the Board has considered the presence of thrift institutions in this market. In this regard, seventeen thrift institutions in the market control approximately 69.7 percent of the total deposits in the market. Based on these and all of the facts of record, the Board concludes that the thrift institutions operating in this market exert a significant competitive influence that mitigates the anticompetitive effects of the proposal in this banking market.[11]

In the Oceanside banking market,[12] Security Pacific is the fifth largest commercial banking organization, controlling approximately $55.2 million in deposits, representing approximately 10.5 percent of the total deposits in commercial banks in the market. Southwest is the second largest commercial banking organization in the market, controlling approximately $83.6 million in deposits, representing approximately 15.9 percent of the total deposits in commercial banks in the market. Upon consummation of the proposal, Security Pacific would become the largest commercial banking organization, controlling approximately $138.8 million in deposits, representing approximately 26.4 percent of the total deposits in commercial banks in the market. The HHI for the Oceanside banking market would increase by 336 points from 1312 to 1648. The Board notes that ten other commercial banks will remain in the market following consummation of this proposal. In addition, the Board has considered the presence of thrift institutions in this market. In this regard, seventeen thrift institutions in the market control approximately 60.9 percent of the total deposits in the market. Based on these and all of the facts of record, the Board concludes that the thrift institutions operating in this market exert a significant competitive influence that mitigates the anticompetitive effects of the proposal in this banking market.[13]

For these reasons, and based upon a review of all of the facts of record, the Board concludes that consummation of this proposal would not have a significantly

8. *National City Corporation*, 70 Federal Reserve Bulletin 743 (1984); *The Chase Manhattan Corporation*, 70 Federal Reserve Bulletin 529 (1984); *NCNB Bancorporation*, 70 Federal Reserve Bulletin 225 (1984); *General Bancshares Corporation*, 69 Federal Reserve Bulletin 802 (1983); and *First Tennessee National Corporation*, 69 Federal Reserve Bulletin 298 (1983).

9. If 50 percent of deposits held by thrift institutions in the San Diego County banking market were included in the calculation of market concentration, Security Pacific's *pro forma* market share would be approximately 12.9 percent and, upon consummation of the proposed transaction, the HHI would increase by 82 points to 779.

10. The Hemet banking market is approximated by the Hemet RMA.

11. If 50 percent of deposits held by thrift institutions in the Hemet banking market were included in the calculation of market concentration, Security Pacific's *pro forma* market share would be 15.3 percent. The HHI would increase by 42 points to 734.

12. The Oceanside banking market is approximated by the Oceanside RMA.

13. If 50 percent of deposits held by thrift institutions in the Oceanside banking market were included in the calculation of market concentration, Security Pacific's *pro forma* market share would be approximately 14.7 percent. The HHI would increase by 105 points to 724.

adverse effect on competition in any relevant market. In addition, the financial and managerial resources of Security Pacific, Southwest, and their respective subsidiaries are consistent with approval.

In considering the convenience and needs of the communities to be served, the Board has taken into account the record of Security Pacific's subsidiary banks under the Community Reinvestment Act ("CRA") (12 U.S.C. § 2901 *et seq.*). The CRA requires the federal financial supervisory agencies to encourage financial institutions to help meet the credit needs of the local communities in which they operate, consistent with the safe and sound operation of such institutions. To accomplish this end, the CRA requires the appropriate federal supervisory authority to assess the institution's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the institution, and to take this record into account in its evaluation of bank holding company applications.[14]

In this regard, the Board has received comments filed jointly by the Certified Development Corporation of San Diego, the San Diego Incubator Corporation, the City-County Reinvestment Task Force, and the North County Housing Foundation (collectively "Protestants") critical of the CRA performance of Security Pacific's lead bank, Security Pacific National Bank ("SPNB"). Specifically, Protestants allege that SPNB has failed to meet the credit needs of low- and moderate-income individuals and has only limited involvement in loan programs guaranteed by the Small Business Administration ("SBA").[15] Security Pacific has submitted a detailed response to the comments made by Protestants.[16]

The Board has carefully reviewed the CRA performance record of SPNB, as well as Protestants' comments and Security Pacific's response to those comments, in light of the CRA, the Board's regulations and the Statement of the Federal Financial Supervisory Agencies Regarding the Community Reinvestment Act ("Agency CRA Statement").[17] The Agency CRA Statement provides guidance regarding the types of policies and procedures that the supervisory agencies believe financial institutions should have in place in order to fulfill their responsibilities under the CRA on an ongoing basis and the procedures that the supervisory agencies will use during the application process to review an institution's CRA compliance and performance.

Initially, the Board notes in this case that Security Pacific's subsidiary banks have each received satisfactory ratings from their primary regulators in examinations of their CRA performance. In addition, Security Pacific has in place the types of programs outlined in the Agency CRA Statement as essential to an effective CRA program. In particular, Security Pacific has adopted a management policy ("Policy") that establishes the organization's principles of compliance with the CRA and specifies the responsibilities of each subsidiary bank for implementing the policies of the CRA. The Policy requires each bank to designate a CRA Officer to monitor the bank's compliance with the CRA and to identify and address the credit and banking needs of the communities served by the bank. Each CRA Officer must complete and maintain a community assessment of every community served by the bank. The community assessment is derived from information solicited by bank offices,[18] and community outreach efforts by bank staff members. In addition, each bank is required to develop market and demographic data with respect to banking resources, population trends, income and employment trends, home ownership, and similar information regarding the needs of the community served by the bank. The community outreach program entails constant contact by bank staff with local government officials, community and nonprofit organizations, and local business associations to identify the community's credit and banking needs. Moreover, SPNB publicizes the availability of its services to low- and moderate-income neighborhoods by advertising in various newspapers.

Each CRA Officer reports to the bank's board of directors, which annually reviews the bank's CRA record and CRA Policy Statement. Security Pacific's corporate CRA Officer supervises the bank CRA Officers and reports regularly to corporate senior management.

14. 12 U.S.C. § 2903.

15. In particular, Protestants assert that SPNB's 1987 centralization of community lending functions at its Community Development Loan Center near Los Angeles has made access to such services difficult for San Diego area residents and businesses, and generally has failed to meet expectations generated by SPNB's promotion of these services. Protestants are also concerned that Bank will stop extending credit to small businesses after it is acquired by Security Pacific. Additionally, Protestants claim that SPNB has failed to respond to the San Diego area's growing need for loans to finance the purchase of affordable housing.

16. SPNB has met privately with Protestants in an effort to clarify the issues presented under the CRA. Although the parties were unable to resolve all of their differences, SPNB has offered to continue to work with Protestants to address their concerns.

17. 54 *Federal Register* 13,742 (1989).

18. Each bank CRA Officer compiles information obtained from surveys conducted by staff of each bank office to determine and identify the following characteristics particular to each bank office: 1) community composition; 2) unique community needs, and 3) existing or proposed bank programs and resources that address the needs of low- to moderate-income persons.

In addition to its CRA Officer, SPNB has organized a Community Development Committee ("Committee") to review continuously the efforts to ensure compliance with SPNB's CRA Policy Statement. The Committee reviews the information, opinions and requests received through SPNB's outreach programs and monitors changes in bank products and services. On an ongoing basis, the Committee coordinates bank resources to respond to identified credit needs in housing and other areas.

The Board has carefully reviewed Protestants' allegations that SPNB has consistently rejected financing requests for low-income housing development, has not provided grants or loans to community organizations concerned with housing issues, and falls significantly below its peers in residential lending directed to low- and moderate-income neighborhoods, particularly in the San Diego City banking market.

An analysis of the Home Mortgage Disclosure Act ("HMDA") data for SPNB in the San Diego metropolitan statistical area ("MSA") for the years 1986–1987 does not support the allegation that SPNB falls significantly below its peers in residential lending to low- and moderate-income neighborhoods. While aggregate lenders made 12 percent of their residential mortgage loans to individuals in low- to moderate-income areas in 1987,[19] SPNB made 11 percent of its residential loans to individuals in low- to moderate-income areas. In 1986, both SPNB and aggregate lenders made 13 percent of their residential mortgage loans to low- and moderate-income individuals. Likewise, in 1987 both SPNB and aggregate lenders made 12 percent of their home improvement loans to individuals in low- to moderate-income areas. In 1986, SPNB made 11 percent of its home improvement loans to individuals in low- to moderate-income areas while aggregate lenders made 12 percent of their home improvement loans to low- and moderate-income individuals.

SPNB has also consistently participated in the financing of low-income housing development. Since 1987, SPNB's Community Development Loan Center has provided financing for the rehabilitation or construction of over 2,000 housing units statewide, generally in partnership with government-assisted programs or private nonprofit agencies. SPNB is currently operating under an agreement with the City and County of San Diego and the City of Oceanside to finance the rehabilitation of single and multi-family dwellings as supplemental funding from other sources becomes available. In addition to direct residential lending, SPNB has invested $1 million in the National Equity Fund, a program that utilizes low-income housing tax credits to finance new units. Together with Security Pacific, SPNB has been instrumental in the formation of the California Community Reinvestment Corporation, a 25-bank consortium aiming to create a $100 million revolving loan fund to provide fixed rate, long-term loans for affordable housing projects in California that would accommodate low- and moderate-income persons. SPNB's share of the commitment to the project will total approximately $17 million.

The Board has also carefully reviewed Protestants' comment that SPNB has had only limited involvement in loan programs guaranteed by the SBA. While it has not been a major SBA lender in recent years,[20] SPNB has addressed the credit needs of the small business community through a variety of conventional lending vehicles. Most of SPNB's small business lending is handled through its retail banking division ("Retail Division"), where the majority of the loans made are between $5,000 and $100,000. During the months of June and July of 1989 alone, the Retail Division made an average of $1.15 million in small business loans or lines of credit in San Diego County per month at an average approval rate of 35 percent.

While the Retail Division offers primarily secured and unsecured commercial loans and real estate construction loans, SPNB branch personnel are trained to counsel applicants in the most appropriate credit products. Furthermore, SPNB has promoted these services by participating in conferences and other special events geared to the small business community in Southern California. In looking to future initiatives in this credit area, SPNB has met with the Cal-State Business Development Corporation to explore plans for a state-guaranteed loan program for small businesses, targeting those which are minority-owned. Additionally, Security Pacific has made various commitments to improve its SBA lending in the San Diego area.[21]

For the foregoing reasons, and based upon the overall CRA record of SPNB, the compliance of SPNB's CRA statement with applicable regulations, and other facts of record, the Board concludes that

19. Low- to moderate-income tracts are defined as those tracts where median family income is less than 80 percent of the MSA's.

20. SPNB has stated that the SBA loan market in San Diego is dominated—and is well-served—by small, local lenders who have developed expertise in the origination and sale of SBA loans in secondary markets. Of the top 30 SBA lenders in the area, only sixteenth-ranked Bank of America could be compared to SPNB in terms of asset size and resources.

21. In response to concerns raised by the protest, Security Pacific indicated that it will: 1) establish a Community Development Center ("CDC") in San Diego—to handle SBA and community development-related lending—to be headed by the officer currently in charge of SBA lending at bank: 2) contribute $250,000 towards the creation of a nonprofit CDC to serve the San Diego area, and 3) provide training to branch managers and loan officers on SBA lending. As indicated in the Policy Statement, commitments offered by an applicant to strengthen specific aspects of its record are appropriate when its past performance reveals no serious deficiencies.

convenience and needs considerations, including the record of performance under the CRA of Security Pacific, SPNB, and Security Pacific's other subsidiary banks, are consistent with approval of this application.

Based on the foregoing and other facts of record, the Board has determined that the applications should be, and hereby are, approved.

The acquisition of Southwest shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of San Francisco, acting pursuant to delegated authority.

By order of the Board of Governors, effective September 18, 1989.

Voting for this action: Vice Chairman Johnson and Governors Seger, Angell, Kelley, and LaWare. Absent and not voting: Chairman Greenspan.

JENNIFER J. JOHNSON
Associate Secretary of the Board

Orders Issued Under Bank Merger Act

Manufacturers Hanover Trust Company New York, New York

Order Approving Acquisition of Certain Assets of a Savings Bank, the Establishment of Branches, and Additional Investment in Bank Premises

Manufacturers Hanover Trust Company, New York, New York ("MHTC"), a state member bank, has applied for the Board's approval under section 18(c) of the Federal Deposit Insurance Act (12 U.S.C. § 1828(c)) (the "Bank Merger Act") to purchase certain assets from and assume certain liabilities of eleven branches and one public accommodation office of Goldome, Buffalo, New York. MHTC has also applied to establish branches at the locations of certain of these offices pursuant to section 9 of the Federal Reserve Act (12 U.S.C. § 321) and to make additional investments in bank premises in excess of the amount of its capital stock, pursuant to section 24A of the Federal Reserve Act (12 U.S.C. § 371d).

Notice of the proposal, affording an opportunity for interested persons to submit comments, has been given in accordance with the Bank Merger Act and the Board's Rules of Procedure (12 C.F.R. 262.3(b)). As required by the Bank Merger Act, reports on the competitive effects of the merger were requested from the United States Attorney General, the Comptroller of the Currency, and the Federal Deposit Insurance Corporation. The time for filing comments has expired, and the Board has considered the applications and all the comments received in light of the factors set forth in the Bank Merger Act (12 U.S.C. § 1828(c)(5)).

MHTC is the fourth largest commercial banking organization in the state of New York, controlling deposits of $23.1 billion, which represents 8.9 percent of total deposits in commercial banking organizations in the state.[1] The Goldome offices MHTC proposes to acquire are located within New York, Nassau, Orange and Suffolk Counties in New York. These offices hold total deposits of $1.15 billion, representing 0.3 percent of total deposits in commercial banks and thrift institutions in the state.[2] Upon consummation of this proposal, MHTC would remain the fourth largest commercial banking organization in the state, controlling approximately 9.3 percent of total deposits in commercial banking organizations in the state.

MHTC and Goldome compete in the Metropolitan New York-New Jersey banking market.[3] MHTC is the fourth largest commercial banking organization in the market, controlling deposits of $22.6 billion, representing approximately 7.4 percent of the total deposits in commercial banking organizations in the market. Goldome is the 20th largest financial institution in the market, controlling deposits of $3.6 billion, representing 1.0 percent of the total deposits in commercial banks and thrift institutions in the market. Upon consummation of this proposal, MHTC would remain the fourth largest commercial banking organization in the market, controlling approximately 7.7 percent of total deposits in commercial banking organizations in the market. The Metropolitan New York-New Jersey banking market is considered to be unconcentrated and would remain so upon consummation of the proposal.[4]

1. Market data are as of June 30, 1987, and state deposit data are as of March 31, 1989.

2. Acquisition of these deposits represents less than one-third of Goldome's assets and liabilities. Moreover, Goldome will continue to operate as a thrift institution after the proposed acquisition. The Board has previously determined that under these circumstances, the proposal may be viewed as the permissible acquisition of certain assets and liabilities of thrift branches rather than the acquisition of a thrift. *See, Citicorp*, 73 FEDERAL RESERVE BULLETIN 669 (1987). Because the deposits of Goldome were insured by the Federal Deposit Insurance Corporation ("FDIC") on the date prior to the enactment of the Financial Institutions Reform, Recovery and Enforcement Act ("FIRREA"), this transaction does not represent the conversion of a Savings Association Insurance Fund Member to a Bank Insurance Fund Member under the provisions of that Act, and is not, therefore, subject to the moratorium on such conversions contained in that Act. *See* FIRREA, Pub. L. No. 101-73, §§ 206(a)(7) and 208(14).

3. The Metropolitan New York-New Jersey market includes New York City and Nassau, Suffolk, Orange, Putnam, Rockland, Sullivan, and Westchester Counties in New York; Bergen, Essex, Hudson, Hunterdon, Middlesex, Monmouth, Morris, Ocean, Passaic, Somerset, Sussex, Union, and Warren Counties in New Jersey; and parts of Fairfield County in Connecticut.

4. Under the revised Department of Justice Merger Guidelines (49 *Federal Register* 26,823 (June 29, 1984)), a market in which the post-merger HHI is less than 1000 is considered unconcentrated. Generally the Justice Department will not challenge a bank merger (in the

The Herfindahl–Hirschman Index ("HHI") of the market would increase by only 2 points to 501. Upon consummation of this proposal, the four-firm concentration ratio for the market would increase 0.2 percent to 38 percent. Based on these and the other facts of record, the Board concludes that consummation of the proposal would not have a significant adverse effect on competition in the relevant banking market.

In evaluating these applications, the Board has carefully considered the financial resources of MHTC and the effect on those resources of the proposed acquisition. The Board has previously stated that it expects banking organizations contemplating expansion proposals to maintain strong capital levels substantially above the minimum levels specified in the Board's Capital Adequacy Guidelines, without significant reliance on intangibles, particularly goodwill.[5] The Board carefully analyzes the effect of expansion proposals on the preservation or achievement of strong capital levels and has adopted a policy that there should be no significant diminution of financial strength below those levels for the purpose of effecting major expansion.[6]

In evaluating the proposed transaction, the Board has considered the size and structure of the proposed acquisition and the fact that Manufacturers Hanover Corporation ("MHC"), the parent of MHTC, has issued additional capital as part of this proposal commensurate with the cost of the acquisition. As a result, consummation of this proposal would not result in any diminution of MHTC's tangible primary capital ratio. The present proposal will result in a relatively small increase in MHTC's asset size, and MHTC will use the acquired deposits to reduce its short-term liabilities. In addition, the Board has considered several initiatives recently announced by MHC to improve its capital position.

These initiatives include the sale of newly issued common stock of MHC representing approximately 4.9 percent of total common stock to Dai-Ichi Kangyo Bank Ltd., Japan ("Dai-Ichi"), and the sale of 60 percent of The CIT Group, one of MHC's subsidiaries, to Dai-Ichi. MHC has also announced a plan to issue approximately $500 million in new common equity by year-end, and to increase its capital reserves. As a result of these initiatives and the proposed acquisition, MHC's capital and reserves will increase and its assets will decrease significantly. Based on these considerations, the Board concludes that the financial resources of MHTC are consistent with approval of the proposal. Managerial and future prospects considerations are also consistent with approval.

In considering the convenience and needs of the communities to be served, the Board has taken into account the record of MHTC under the Community Reinvestment Act ("CRA") (12 U.S.C. § 2901 *et seq.*). The CRA requires the federal financial supervisory agencies to encourage financial institutions to help meet the credit needs of the local communities in which they operate, consistent with the safe and sound operation of such institutions. To accomplish this end, the CRA requires the appropriate federal supervisory authority to assess the institution's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the institutions.[7]

In this regard, the Board has received comments filed jointly by the United Mine Workers of America and the Association of Community Organizations for Reform Now (collectively "Protestants") critical of the CRA performance of MHTC. Specifically, Protestants contend that MHTC has failed to meet the credit needs of low- and moderate-income communities, focusing primarily on Brooklyn, New York.[8] MHTC has submitted a detailed response to the comments made by Protestants.[9]

The Board has carefully reviewed the CRA performance record of MHTC, as well as Protestants' comments and MHTC's response to those comments, in light of the CRA, the Board's regulations and the Statement of the Federal Financial Supervisory Agencies Regarding the Community Reinvestment Act (March 21, 1989) ("Agency CRA Statement").[10] The Agency CRA Statement provides guidance regarding

absence of other factors indicating anticompetitive effects) if the post-merger HHI is less than 1000.

5. *The Bank of New York Company, Inc.*, 74 FEDERAL RESERVE BULLETIN 257 (1988); Capital Adequacy Guidelines, 50 *Federal Register* 16,057 (April 24, 1985).

6. Thus, for example, the Board has generally approved proposals involving a decline in capital only where the applicants have promptly restored their capital to pre-acquisition levels following consummation of the proposals and have implemented programs of capital improvement to raise capital significantly above minimum levels. *See, e.g., Citicorp*, 72 FEDERAL RESERVE BULLETIN 726 (1986); *Security Pacific Corporation*, 72 FEDERAL RESERVE BULLETIN 800 (1986). *See also, Security Banks of Montana*, 71 FEDERAL RESERVE BULLETIN 246 (1985).

7. 12 U.S.C. § 2903.

8. In particular, Protestants contend that MHTC has engaged in discriminatory lending practices and procedures; generated an inadequate volume of first mortgage lending and lending for multi-family properties; failed to participate in government-insured mortgage loan programs; and offered inappropriate credit and deposit products as set forth in its CRA Statement that include abnormally high finance charges. Protestants also allege that MHTC's record of branch openings and closings indicates a bias against low- and moderate-income communities.

9. In this regard, MHTC has met privately with Protestants in an effort to clarify the issues presented under the CRA. Although the parties were unable to resolve all their differences, MHTC has offered to continue to work with Protestants to develop initiatives to provide affordable housing in low- and moderate-income communities served by MHTC.

10. 54 *Federal Register* 13,742 (1989).

the types of policies and procedures that the supervisory agencies believe financial institutions should have in place in order to fulfill their responsibilities under the CRA on an ongoing basis and the procedures that the supervisory agencies will use during the application process to review an institution's CRA compliance and performance.

Initially, the Board notes in this case that MHTC has received satisfactory ratings in examination of its CRA performance in its most recent reports of examination. In addition, MHTC has in place the types of programs outlined in the Agency CRA Statement as essential to an effective CRA program. The CRA program implemented by MHTC has a community outreach component that calls for ongoing community contact by departmental staff regarding the needs of the community, including low- and moderate-income neighborhoods, and the products and services that the bank offers to meet these needs. MHTC also uses specialized marketing efforts to ensure that all segments of the community are aware of its services. For example, MHTC regularly uses newspapers and media outlets, including neighborhood weeklies and ethnic publications, to reach all segments of the community.

To promote community input regarding the community's needs and the development of its products and services, MHTC has established a Community Reinvestment Office, which meets with government officials, representatives of local businesses, community organizations and residents to hear their concerns and to provide information regarding MHTC's services. The Community Reinvestment Office also conducts surveys to determine the credit needs of the community and the degree of success that MHTC has achieved in meeting those needs. Staff of MHTC are involved in numerous community organizations and advisory groups throughout its area.

The Community Reinvestment Office is headed by the Community Reinvestment Officer, who is responsible for ensuring ongoing compliance with all CRA regulations and for planning, coordinating, promoting, implementing and monitoring all CRA related programs, including the development and coordination of MHTC's outreach efforts to the communities it serves, especially low- and moderate-income neighborhoods. This officer is assisted in the performance of these functions by various staff units within MHTC. MHTC's Community Reinvestment Officer updates senior management on a weekly basis regarding community banking needs, community development initiatives, proposed consumer banking legislation and opportunities for MHTC to participate in major public/private projects. In addition, MHTC's board of directors annually reviews MHTC's CRA record and CRA statement.

Protestants allege that MHTC has failed to meet the credit needs of the borough of Brooklyn, New York, through an inadequate volume of mortgages and multifamily mortgage loans and an inadequate participation in federal government insured mortgage loan programs.[11] While the Agency CRA Statement identifies these types of loan products and federal government-insured mortgage programs as examples of efforts to meet the credit needs of the community, the Agency CRA Statement makes clear that an institution need not offer every financial service discussed in order to meet its CRA responsibilities.

In this regard, MHTC states that in the years 1986 through 1988, it originated approximately 38,000 personal loans in Brooklyn, totaling approximately $150 million. Approximately 23,000 of these loans, totaling $77 million (or 60 percent of the total for Brooklyn), were in low- and moderate-income neighborhoods. During this same period, MHTC originated 1,281 small business loans in Brooklyn, totaling approximately $290 million. Approximately $153 million of these loans (53 percent of the total for Brooklyn) were made in low- and moderate-income neighborhoods. At year-end 1988, MHTC had approximately 76,000 active credit card account holders in Brooklyn, with a total outstanding balance of $134 million, $52 million of which represented credit extensions to individuals in low- and moderate-income neighborhoods.

In addition, MHTC reports that from 1986 through 1988, it originated $50 million in first mortgages, home equity and home owner loans in Brooklyn, of which $9.5 million was in low- and moderate-income neighborhoods. In 1988, MHTC surveyed the realty and mortgage-related markets to address a perceived need for mortgage lending within its community. As a result of this survey, MHTC has developed marketing strategies and designed several mortgage products to increase its mortgage lending, and, through such products as graduated payment mortgages and high loan to value ratios, to increase its mortgage lending to its low- and moderate-income communities. The Board also notes that MHTC offers both basic checking and low balance savings accounts designed to accommodate customers with limited finances.[12] Moreover, MHTC has participated in a number of programs designed to provide assistance to community development programs, and has made other loans and invest-

11. While the Protestants have focused on MHTC's performance in Brooklyn, the size and service area of MHTC require the Board, under the CRA, to assess the overall involvement of MHTC within its whole community.

12. Basic checking provides up to eight free checks per month and unlimited free automatic teller machine usage for a $5.00 monthly fee and no minimum balance. Additional checks and ATM transactions are $0.75 each. Savings accounts may be maintained with a balance of $1.00.

ments recognized by the Agency CRA Statement as helping to meet the credit needs of the community.[13]

In considering Protestants' allegations, particularly the allegations relating to discriminatory lending practices and patterns and the inappropriateness of MHTC's products and services to its community as reflected in its CRA statement, the most recent CRA examination of MHTC did not reveal any discriminatory lending patterns or practices.[14] Credit applications were evenly distributed throughout the communities, including low- and moderate-income areas. Furthermore, MHTC's CRA Statement was found to be in compliance with applicable regulations.

The Board has also carefully reviewed Protestants' comments that MHTC has a bias in branch openings and closings and that MHTC has closed branches in low- and moderate-income communities while opening branches in high-income communities.

An analysis of the branch closings and openings by MHTC from 1978 through 1989 does not reveal a pattern of disinvestment in low- and moderate-income areas. The record shows that MHTC maintains many branches in low- and moderate-income communities throughout its service areas. MHTC has a written corporate policy which requires substantial financial and public service analysis prior to a decision to close a branch.[15] The record shows that MHTC has closed branches after consideration of their lack of profitability, the presence of other MHTC branches nearby and the availability of other banking alternatives in the community. The Board notes that MHTC's corporate policy on branch closings requires management to notify the public in advance of any proposed closing, and to conduct an analysis of the impact of the branch closing on the local community and efforts that may be made to minimize any adverse impact. MHTC states that on two occasions, presentations by the local community resulted in a postponement or cancellation of the planned closing. The Board also notes that many of the branch closings cited by Protestants constituted elimination of duplicative facilities after an acquisition.

For the foregoing reasons, and based upon the overall CRA record of MHTC, as well as other facts of record, the Board concludes that convenience and needs considerations are consistent with approval of this application.[16]

Bank has applied under section 9 of the Federal Reserve Act (12 U.S.C. § 321 *et seq.*), to establish new branches at the sites of certain of the Goldome branches that are the subject of this proposal. The Board has considered the factors it is required to consider when approving applications for establishing branches pursuant to section 9 of the Federal Reserve Act (12 U.S.C. § 322) and finds those factors to be consistent with approval.

MHTC also requests permission under section 24A of the Federal Reserve Act to make an additional investment in bank premises in connection with this proposal. The additional investment will be used to purchase leasehold improvements of the acquired branches. The Board concludes that MHTC's ability to make an additional investment in bank premises is necessary to enable MHTC to acquire the Goldome branches, and is consistent with approval.

On the basis of the record, the applications are approved for the reasons summarized above. The transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of New York, pursuant to delegated authority.

By order of the Board of Governors, effective September 26, 1989.

Voting for this action: Chairman Greenspan and Governors Johnson, Seger, Angell, Kelley, and LaWare.

JENNIFER J. JOHNSON
Associate Secretary of the Board

---

13. For example, during 1987 to 1988, MHTC's Urban Lending Department generated approximately $25.9 million in bridge loans to not-for-profit organizations located in predominately low- and moderate-income neighborhoods. Additionally, MHTC has extended approximately $25 million as part of a two-year revolving credit facility to a Minority Enterprise Small Business Investment Corporation. Finally, MHTC held $950 million in tax-exempt state and municipal bonds at the close of 1988, of which 35.6 percent was composed of obligations issued by New York State and its municipalities.

14. While Protestants alleged discrimination in lending patterns based upon mortgage data obtained under the Home Mortgage Disclosure Act of 1975 (12 U.S.C. § 2801 *et seq.*), an examination of MHTC's personal, credit card, residential finance and small business loans indicates no significant disparities of lending patterns within MHTC's service area.

15. The State of New York requires an analysis of the decision to close a branch; MHTC's policy predates imposition of the state requirement and furnishes substantially similar information.

16. The Board has carefully considered Protestants' requests for a public meeting and a public hearing on this application. Although section 18(c) of the Bank Merger Act does not require a public meeting or formal hearing in this instance, the Board may, in any case, order a public meeting or hearing. 12 C.F.R. 262.3(e). The Board's Rules of Procedure also provide that a public meeting may be held to clarify factual issues related to the record of an applicant in meeting the convenience and needs of its community, or to provide an opportunity for interested persons to provide testimony. 12 C.F.R. 262.25(d). The Board notes that Protestants and MHTC have submitted substantial written material regarding the CRA performance of MHTC and have held a private meeting to discuss these issues. In light of these facts, the Board believes that a public meeting or hearing is not necessary to clarify the record in this case and would not serve any useful purpose, and these requests are, therefore, denied.

APPLICATIONS APPROVED UNDER BANK HOLDING COMPANY ACT

By the Secretary of the Board

Recent applications have been approved by the Secretary of the Board as listed below. Copies are available upon request to the Freedom of Information Office, Office of the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

1. Unless otherwise noted, rates of change are calculated from average amounts outstanding in preceding month or quarter.

2. Figures incorporate adjustments for discontinuities associated with the implementation of the Monetary Control Act and other regulatory changes to reserve requirements. To adjust for discontinuities due to changes in reserve requirements on reservable nondeposit liabilities, the sum of such required reserves is subtracted from the actual series. Similarly, in adjusting for discontinuities in the monetary base, required clearing balances and adjustments to compensate for float also are subtracted from the actual series.

3. The monetary base not adjusted for discontinuities consists of total reserves plus required clearing balances and adjustments to compensate for float at Federal Reserve Banks plus the currency component of the money stock less the amount of vault cash holdings of thrift institutions that is included in the currency component of the money stock plus, for institutions not having required reserve balances, the excess of current vault cash over the amount applied to satisfy current reserve requirements. After the introduction of contemporaneous reserve requirements (CRR), currency and vault cash figures are measured over the weekly computation period ending Monday.

Before CRR, all components of the monetary base other than excess reserves are seasonally adjusted as a whole, rather than by component, and excess reserves are added on a not seasonally adjusted basis. After CRR, the seasonally adjusted series consists of seasonally adjusted total reserves, which include excess reserves on a not seasonally adjusted basis, plus the seasonally adjusted currency component of the money stock plus the remaining items seasonally adjusted as a whole.

4. Composition of the money stock measures and debt is as follows:

M1: (1) currency outside the Treasury, Federal Reserve Banks, and the vaults of depository institutions; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to depository institutions, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCD) consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions.

M2: M1 plus overnight (and continuing contract) repurchase agreements (RPs) issued by all commercial banks and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks worldwide, Money Market Deposit Accounts (MMDAs), savings and small-denomination time deposits (time deposits—including retail RPs—in amounts of less than $100,000), and balances in both taxable and tax-exempt general purpose and broker-dealer money market mutual funds. Excludes individual retirement accounts (IRA) and Keogh balances at depository institutions and money market funds. Also excludes all balances held by U.S. commercial banks, money market funds (general purpose and broker-dealer), foreign governments and commercial banks, and the U.S. government.

M3: M2 plus large-denomination time deposits and term RP liabilities (in amounts of $100,000 or more) issued by commercial banks and thrift institutions, term Eurodollars held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada, and balances in both taxable and tax-exempt, institution-only money market mutual funds. Excludes amounts held by depository institutions, the U.S. government, money market funds, and foreign banks and official institutions. Also subtracted is the estimated amount of overnight RPs and Eurodollars held by institution-only money market mutual funds.

L: M3 plus the nonbank public holdings of U.S. savings bonds, short-term Treasury securities, commercial paper and bankers acceptances, net of money market mutual fund holdings of these assets.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit market debt of the U.S. government, state and local governments, and private nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers acceptances, and other debt instruments. The source of data on domestic nonfinancial debt is the Federal Reserve Board's flow of funds accounts. Debt data are based on monthly averages. Growth rates for debt reflect adjustments for discontinuities over time in the levels of debt presented in other tables.

5. Sum of overnight RPs and Eurodollars, money market fund balances (general purpose and broker-dealer), MMDAs, and savings and small time deposits less the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and savings deposit liabilities.

6. Sum of large time deposits, term RPs, and Eurodollars of U.S. residents, money market fund balances (institution-only), less a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market mutual funds.

7. Excludes MMDAs.

8. Small-denomination time deposits—including retail RPs—are those issued in amounts of less than $100,000. All IRA and Keogh accounts at commercial banks and thrifts are subtracted from small time deposits.

9. Large-denomination time deposits are those issued in amounts of $100,000 or more, excluding those booked at international banking facilities.

10. Large-denomination time deposits at commercial banks less those held by money market mutual funds, depository institutions, and foreign banks and official institutions.

1. *Includes* securities loaned—fully guaranteed by U.S. government securities pledged with Federal Reserve Banks—and *excludes* any securities sold and scheduled to be bought back under matched sale-purchase transactions.

2. Revised for periods between October 1986 and April 1987. At times during this interval, outstanding gold certificates were inadvertently in excess of the gold stock. Revised data not included in this table are available from the Division of Research and Statistics, Banking Section.

3. Excludes required clearing balances and adjustments to compensate for float.

NOTE. For amounts of currency and coin held as reserves, see table 1.12. Components may not add to totals because of rounding.

20 Extended credit at Reserve Banks[8]	1,206	1,148	1,657	287	146	90	55	44	22	21

1. These data also appear in the Board's H.3 (502) release. For address, see inside front cover.
2. Excludes required clearing balances and adjustments to compensate for float.
3. Dates refer to the maintenance periods in which the vault cash can be used to satisfy reserve requirements. Under contemporaneous reserve requirements, maintenance periods end 30 days after the lagged computation periods in which the balances are held.
4. Equal to all vault cash held during the lagged computation period by institutions having required reserve balances at Federal Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserve balances.
5. Total vault cash at institutions having no required reserve balances less the amount of vault cash equal to their required reserves during the maintenance period.
6. Total reserves not adjusted for discontinuities consist of reserve balances with Federal Reserve Banks, which exclude required clearing balances and adjustments to compensate for float, plus vault cash used to satisfy reserve requirements. Such vault cash consists of all vault cash held during the lagged computation period by institutions having required reserve balances at Federal Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserve balances.
7. Reserve balances with Federal Reserve Banks plus vault cash used to satisfy reserve requirements less required reserves.
8. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as there is with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.
9. Data are prorated monthly averages of biweekly averages.

1. Adjustment credit is available on a short-term basis to help depository institutions meet temporary needs for funds that cannot be met through reasonable alternative sources. After May 19, 1986, the highest rate established for loans to depository institutions may be charged on adjustment credit loans of unusual size that result from a major operating problem at the borrower's facility.

Seasonal credit is available to help smaller depository institutions meet regular, seasonal needs for funds that cannot be met through special industry lenders and that arise from a combination of expected patterns of movement in their deposits and loans. A temporary simplified seasonal program was established on Mar. 8, 1985, and the interest rate was a fixed rate ½ percent above the rate on adjustment credit. The program was reestablished for 1986 and 1987 but was not renewed for 1988.

2. Extended credit is available to depository institutions, when similar assistance is not reasonably available from other sources, when exceptional circumstances or practices involve only a particular institution or when an institution is experiencing difficulties adjusting to changing market conditions over a longer period of time.

3. For extended-credit loans outstanding more than 30 days, a flexible rate somewhat above rates on market sources of funds ordinarily will be charged, but in no case will the rate charged be less than the basic discount rate plus 50 basis points. The flexible rate is reestablished on the first business day of each two-week reserve maintenance period. At the discretion of the Federal Reserve Bank, the time period for which the basic discount rate is applied may be shortened.

4. For earlier data, see the following publications of the Board of Governors: *Banking and Monetary Statistics, 1914–1941*, and *1941–1970*; *Annual Statistical Digest, 1970–1979*.

In 1980 and 1981, the Federal Reserve applied a surcharge to short-term adjustment credit borrowings by institutions with deposits of $500 million or more that had borrowed in successive weeks or in more than four weeks in a calendar quarter. A 3 percent surcharge was in effect from Mar. 17, 1980 through May 7, 1980. There was no surcharge until Nov. 17, 1980, when a 2 percent surcharge was adopted; the surcharge was subsequently raised to 3 percent on Dec. 5, 1980, and to 4 percent on May 5, 1981. The surcharge was reduced to 3 percent effective Sept. 22, 1981, and to 2 percent effective Oct. 12, 1981. As of Oct. 1, 1981 the formula for applying the surcharge was changed from a calendar quarter to a moving 13-week period. The surcharge was eliminated on Nov. 17, 1981.

1.15 RESERVE REQUIREMENTS OF DEPOSITORY INSTITUTIONS[1]

Percent of deposits

Type of deposit, and deposit interval[2]	Depository institution requirements after implementation of the Monetary Control Act	
	Percent of deposits	Effective date
Net transaction accounts[3,4]		
$0 million–$41.5 million	3	12/20/88
More than $41.5 million	12	12/20/88
Nonpersonal time deposits[5]		
By original maturity		
Less than 1½ years	3	10/6/83
1½ years or more	0	10/6/83
Eurocurrency liabilities		
All types	3	11/13/80

1. Reserve requirements in effect on Dec. 31, 1988. Required reserves must be held in the form of deposits with Federal Reserve Banks or vault cash. Nonmembers may maintain reserve balances with a Federal Reserve Bank indirectly on a pass-through basis with certain approved institutions. For previous reserve requirements, see earlier editions of the *Annual Report* and of the FEDERAL RESERVE BULLETIN. Under provisions of the Monetary Control Act, depository institutions include commercial banks, mutual savings banks, savings and loan associations, credit unions, agencies and branches of foreign banks, and Edge corporations.

2. The Garn–St Germain Depository Institutions Act of 1982 (Public Law 97–320) requires that $2 million of reservable liabilities (transaction accounts, nonpersonal time deposits, and Eurocurrency liabilities) of each depository institution be subject to a zero percent reserve requirement. The Board is to adjust the amount of reservable liabilities subject to this zero percent reserve requirement each year for the succeeding calendar year by 80 percent of the percentage increase in the total reservable liabilities of all depository institutions, measured on an annual basis as of June 30. No corresponding adjustment is to be made in the event of a decrease. On Dec. 20, 1988, the exemption was raised from $3.2 million to $3.4 million. In determining the reserve requirements of depository institutions, the exemption shall apply in the following order: (1) net NOW accounts (NOW accounts less allowable deductions); (2) net other transaction accounts; and (3) nonpersonal time deposits or Eurocurrency liabilities starting with those with the highest reserve ratio. With respect to NOW accounts and other transaction accounts, the exemption applies only to such accounts that would be subject to a 3 percent reserve requirement.

3. Transaction accounts include all deposits on which the account holder is permitted to make withdrawals by negotiable or transferable instruments, payment orders of withdrawal, and telephone and preauthorized transfers in excess of three per month for the purpose of making payments to third persons or others. However, MMDAs and similar accounts subject to the rules that permit no more than six preauthorized, automatic, or other transfers per month, of which no more than three can be checks, are not transaction accounts (such accounts are savings deposits subject to time deposit reserve requirements).

4. The Monetary Control Act of 1980 requires that the amount of transaction accounts against which the 3 percent reserve requirement applies be modified annually by 80 percent of the percentage increase in transaction accounts held by all depository institutions, determined as of June 30 each year. Effective Dec. 20, 1988 for institutions reporting quarterly and Dec. 27, 1988 for institutions reporting weekly, the amount was increased from $40.5 million to $41.5 million.

5. In general, nonpersonal time deposits are time deposits, including savings deposits, that are not transaction accounts and in which a beneficial interest is held by a depositor that is not a natural person. Also included are certain transferable time deposits held by natural persons and certain obligations issued to depository institution offices located outside the United States. For details, see section 204.2 of Regulation D.

15 Monetary base[5]	223.53	247.71	266.16	283.18	281.31	277.66	278.94	281.52	280.54	283.27	285.36	284.23

1. Latest monthly and biweekly figures are available from the Board's H.3(502) *statistical release*. Historical data and estimates of the impact on required reserves of changes in reserve requirements are available from the Monetary and Reserves Projections Section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

2. Figures incorporate adjustments for discontinuities associated with the implementation of the Monetary Control Act and other regulatory changes to reserve requirements. To adjust for discontinuities due to changes in reserve requirements on reservable nondeposit liabilities, the sum of such required reserves is subtracted from the actual series. Similarly, in adjusting for discontinuities in the monetary base, required clearing balances and adjustments to compensate for float also are subtracted from the actual series.

3. Total reserves not adjusted for discontinuities consist of reserve balances with Federal Reserve Banks, which exclude required clearing balances and adjustments to compensate for float, plus vault cash held during the lagged computation period by institutions having required reserve balances at Federal Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserve balances.

4. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to helpdepository institutions deal with sustained liquidity pressures. Because there isnot the same need to repay such borrowing promptly as there is with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.

5. The monetary base not adjusted for discontinuities consists of total reserves plus required clearing balances and adjustments to compensate for float at Federal Reserve Banks and the currency component of the money stock plus, for institutions not having required reserve balances, the excess of current vault cash over the amount applied to satisfy current reserve requirements. Currency and vault cash figures are measured over the weekly computation period ending Monday.

The seasonally adjusted monetary base consists of seasonally adjusted total reserves, which include excess reserves on a not seasonally adjusted basis, plus the seasonally adjusted currency component of the money stock and the remaining items seasonally adjusted as a whole.

6. Reflects actual reserve requirements, including those on nondeposit liabilities, with no adjustments to eliminate the effects of discontinuities associated with implementation of the Monetary Control Act or other regulatory changes to reserve requirements.

1.21 MONEY STOCK, LIQUID ASSETS, AND DEBT MEASURES[1]

NOTES TO TABLE 1.21

1. Latest monthly and weekly figures are available from the Board's H.6 (508) release. Historical data are available from the Monetary and Reserves Projection section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

2. Composition of the money stock measures and debt is as follows:

M1: (1) currency outside the Treasury, Federal Reserve Banks, and the vaults of depository institutions; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to depository institutions, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCD) consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions.

M2: M1 plus overnight (and continuing contract) repurchase agreements (RPs) issued by all commercial banks and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks worldwide, MMDAs, savings and small-denomination time deposits (time deposits—including retail RPs—in amounts of less than $100,000), and balances in both taxable and tax-exempt general purpose and broker–dealer money market mutual funds. Excludes individual retirement accounts (IRA) and Keogh balances at depository institutions and money market funds. Also excludes all balances held by U.S. commercial banks, money market funds (general purpose and broker–dealer), foreign governments and commercial banks, and the U.S. government.

M3: M2 plus large-denomination time deposits and term RP liabilities (in amounts of $100,000 or more) issued by commercial banks and thrift institutions, term Eurodollars held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada, and balances in both taxable and tax-exempt, institution-only money market mutual funds. Excludes amounts held by depository institutions, the U.S. government, money market funds, and foreign banks and official institutions. Also subtracted is the estimated amount of overnight RPs and Eurodollars held by institution-only money market mutual funds.

L: M3 plus the nonbank public holdings of U.S. savings bonds, short-term Treasury securities, commercial paper and bankers acceptances, net of money market mutual fund holdings of these assets.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit market debt of the U.S. government, state and local governments, and private nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers acceptances, and other debt instruments. The source of data on domestic nonfinancial debt is the Federal Reserve Board's flow of funds accounts. Debt data are based on monthly averages.

3. Currency outside the U.S. Treasury, Federal Reserve Banks, and vaults of depository institutions.

4. Outstanding amount of U.S. dollar-denominated travelers checks of nonbank issuers. Travelers checks issued by depository institutions are included in demand deposits.

5. Demand deposits at commercial banks and foreign-related institutions other than those due to depository institutions, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float.

6. Consists of NOW and ATS balances at all depository institutions, credit union share draft balances, and demand deposits at thrift institutions.

7. Sum of overnight RPs and overnight Eurodollars, money market fund balances (general purpose and broker-dealer), MMDAs, and savings and small time deposits.

8. Sum of large time deposits, term RPs, and term Eurodollars of U.S. residents, money market fund balances (institution-only), less the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds.

9. Savings deposits exclude MMDAs.

10. Small-denomination time deposits—including retail RPs—are those issued in amounts of less than $100,000. All individual retirement accounts (IRA) and Keogh accounts at commercial banks and thrifts are subtracted from small time deposits.

11. Large-denomination time deposits are those issued in amounts of $100,000 or more, excluding those booked at international banking facilities.

12. Large-denomination time deposits at commercial banks less those held by money market mutual funds, depository institutions, and foreign banks and official institutions.

1.22 BANK DEBITS AND DEPOSIT TURNOVER[1]

Debits are shown in billions of dollars, turnover as ratio of debits to deposits. Monthly data are at annual rates.

1. Commercial banks are those in the 50 states and the District of Columbia with national or state charters plus agencies and branches of foreign banks, New York investment companies majority owned by foreign banks, and Edge Act corporations owned by domestically chartered and foreign banks.

These data also appear in the Board's G.10 (411) release. For address, see inside front cover.

2. Includes federal funds, RPs, and other borrowing from nonbanks and net balances due to related foreign offices.

3. Reflects net positions of U.S. chartered banks, Edge Act corporations, and U.S. branches and agencies of foreign banks with related foreign offices plus net positions with own IBFs.

4. Other borrowings are borrowings through any instrument, such as a promissory note or due bill, given for the purpose of borrowing money for the banking business. This includes borrowings from Federal Reserve Banks and from foreign banks, term federal funds, loan RPs, and sales of participations in pooled loans.

5. Based on daily average data reported weekly by approximately 120 large banks and quarterly or annual data reported by other banks.

6. Figures are partly daily averages and partly averages of Wednesday data.

7. Time deposits in denominations of $100,000 or more. Estimated averages of daily data.

8. U.S. Treasury demand deposits and Treasury tax-and-loan notes at commercial banks. Averages of daily data.

1. Back data are available from the Banking and Monetary Statistics section, Board of Governors of the Federal Reserve System, Washington, D.C., 20551. These data also appear in the Board's weekly H.8 (510) release.

Figures are partly estimated. They include all bank-premises subsidiaries and other significant majority-owned domestic subsidiaries. Loan and securities data for domestically chartered commercial banks are estimates for the last Wednesday of the month based on a sample of weekly reporting banks and quarter-end condition report data. Data for other banking institutions are estimates made for the last Wednesday of the month based on a weekly reporting sample of foreign-related institutions and quarter-end condition reports.

2. Commercial banking institutions include insured domestically chartered commercial banks, branches and agencies of foreign banks, Edge Act and Agreement corporations, and New York State foreign investment corporations.

3. Insured domestically chartered commercial banks include all member banks and insured nonmember banks.

1. Beginning Jan. 6, 1988, the "Large bank" reporting group was revised somewhat, eliminating some former reporters with less than $2 billion of assets and adding some new reporters with assets greater than $3 billion.
2. For adjustment bank data see this table in the March 1989 Bulletin. The adjustment data for 1988 should be added to the reported data for 1988 to establish comparability with data reported for 1989.
3. Includes U.S. government-issued or guaranteed certificates of participation in pools of residential mortgages.
4. Includes securities purchased under agreements to resell.
5. Includes allocated transfer risk reserve.
6. Includes federal funds purchased and securities sold under agreements to repurchase; for information on these liabilities at banks with assets of $1 billionor more on Dec. 31, 1977, see table 1.13.
7. This is not a measure of equity capital for use in capital-adequacy analysis or for other analytic uses.
8. Exclusive of loans and federal funds transactions with domestic commercial banks.
9. Loans sold are those sold outright to a bank's own foreign branches, nonconsolidated nonbank affiliates of the bank, the bank's holding company (if not a bank), and nonconsolidated nonbank subsidiaries of the holding company.

1. Effective Jan. 4, 1989, the reporting panel includes a new group of large U.S. branches and agencies of foreign banks. Earlier data included 65 U.S. branches and agencies of foreign banks that included those branches and agencies with assets of $750 million or more on June 30, 1980, plus those branches and agencies that had reached the $750 million asset level on Dec. 31, 1984. These data also appear in the Board's H.4.2 (504) release. For address, see inside front cover.
2. Includes securities purchased under agreements to resell.
3. Effective Jan. 4, 1989, loans secured by real estate are being reported as a separate component of Other loans, gross. Formerly, these loans were included in "All other", line 21.
4. Includes credit balances, demand deposits, and other checkable deposits.
5. Includes savings deposits, money market deposit accounts, and time deposits.
6. Includes securities sold under agreements to repurchase.
7. Exclusive of loans to and federal funds sold to commercial banks in the United States.

7 **All holders—Individuals, partnerships, and corporations**	**157.1**	**168.6**	**195.1**	**183.8**	**181.8**	**191.5**	**185.3**	**198.3**	**181.9**	**182.2**
8 Financial business	25.3	25.9	32.5	28.6	27.0	30.0	27.2	30.5	27.2	25.4
9 Nonfinancial business	87.1	94.5	106.4	100.0	98.2	103.1	101.5	108.7	98.6	99.8
10 Consumer	30.5	33.2	37.5	39.1	41.7	42.3	41.8	42.6	41.1	42.4
11 Foreign	3.4	3.1	3.3	3.3	3.4	3.4	3.1	3.6	3.3	2.9
12 Other	10.9	12.0	15.4	12.7	11.4	12.8	11.7	12.9	11.7	11.7

1. Figures include cash items in process of collection. Estimates of gross deposits are based on reports supplied by a sample of commercial banks. Types of depositors in each category are described in the June 1971 BULLETIN, p. 466. Figures may not add to totals because of rounding.

2. Beginning in March 1984, these data reflect a change in the panel of weekly reporting banks, and are not comparable to earlier data. Estimates in billions of dollars for December 1983 based on the new weekly reporting panel are: financial business, 24.4; nonfinancial business, 80.9; consumer, 30.1; foreign, 3.1; other 9.5.

3. Beginning March 1985, financial business deposits and, by implication, total gross demand deposits have been redefined to exclude demand deposits due to thrift institutions. Historical data have not been revised. The estimated volume of such deposits for December 1984 is $5.0 billion at all insured commercial banks and $3.0 billion at weekly reporting banks.

4. Historical data back to March 1985 have been revised to account for corrections of bank reporting errors. Historical data before March 1985 have not been revised, and may contain reporting errors. Data for all commercial banks for March 1985 were revised as follows (in billions of dollars): all holders, −.3; financial business, −.8; nonfinancial business, −.4; consumer, .9; foreign, .1; other, −.1. Data for weekly reporting banks for March 1985 were revised as follows (in billions of dollars): all holders, −.1; financial business, −.7; nonfinancial business, −.5; consumer, 1.1; foreign, .1; other, −.2.

5. Beginning March 1988, these data reflect a change in the panel of weekly reporting banks, and are not comparable to earlier data. Estimates in billions of dollars for December 1987 based on the new weekly reporting panel are: financial business, 29.4; nonfinancial business, 105.1; consumer, 41.1; foreign, 3.4; other, 13.1.

1. Institutions engaged primarily in activities such as, but not limited to, commercial savings, and mortgage banking; sales, personal, and mortgage financing; factoring, finance leasing, and other business lending; insurance underwriting; and other investment activities.
2. Includes all financial company paper sold by dealers in the open market.
3. Beginning January 1989, bank-related series have been discontinued.
4. As reported by financial companies that place their paper directly with investors.
5. Includes public utilities and firms engaged primarily in such activities as communications, construction, manufacturing, mining, wholesale and retail trade, transportation, and services.
6. Beginning January 1988, the number of respondents in the bankers acceptance survey were reduced from 155 to 111 institutions—those with $100 million or more in total acceptances. The new reporting group accounts for over 90 percent of total acceptances activity.

1. Weekly, monthly and annual figures are averages of all calendar days, where the rate for a weekend or holiday is taken to be the rate prevailing on the preceding business day. The daily rate is the average of the rates on a given day weighted by the volume of transactions at these rates.
2. Weekly figures are averages for statement week ending Wednesday.
3. Rate for the Federal Reserve Bank of New York.
4. Unweighted average of offering rates quoted by at least five dealers (in the case of commercial paper), or finance companies (in the case of finance paper). Before November 1979, maturities for data shown are 30–59 days, 90–119 days, and 120–179 days for commercial paper; and 30–59 days, 90–119 days, and 150–179 days for finance paper.
5. Yields are quoted on a bank-discount basis, rather than in an investment yield basis (which would give a higher figure).
6. Dealer closing offered rates for top-rated banks. Most representative rate (which may be, but need not be, the average of the rates quoted by the dealers).
7. Unweighted average of offered rates quoted by at least five dealers early in the day.
8. Calendar week average. For indication purposes only.
9. Unweighted average of closing bid rates quoted by at least five dealers.
10. Rates are recorded in the week in which bills are issued. Beginning with the Treasury bill auction held on Apr. 18, 1983, bidders were required to state the percentage yield (on a bank discount basis) that they would accept to two decimal places. Thus, average issuing rates in bill auctions will be reported using two rather than three decimal places.
11. Yields are based on closing bid prices quoted by at least five dealers.
12. Yields adjusted to constant maturities by the U.S. Treasury. That is, yields are read from a yield curve at fixed maturities. Based on only recently issued, actively traded securities.
13. Averages (to maturity or call) for all outstanding bonds neither due nor callable in less than 10 years, including one very low yielding "flower" bond.
14. General obligations based on Thursday figures; Moody's Investors Service.
15. General obligations only, with 20 years to maturity, issued by 20 state and local governmental units of mixed quality. Based on figures for Thursday.
16. Daily figures from Moody's Investors Service. Based on yields to maturity on selected long-term bonds.
17. Compilation of the Federal Reserve. This series is an estimate of the yield on recently-offered, A-rated utility bonds with a 30-year maturity and 5 years of call protection. Weekly data are based on Friday quotations.
18. Standard and Poor's corporate series. Preferred stock ratio based on a sample of ten issues: four public utilities, four industrials, one financial, and one transportation. Common stock ratios on the 500 stocks in the price index.

NOTE. These data also appear in the Board's H.15 (519) and G.13 (415) releases. For address, see inside front cover.

1. Effective July 1976, includes a new financial group, banks and insurance companies. With this change the index includes 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40 financial.
2. Beginning July 5, 1983, the American Stock Exchange rebased its index effectively cutting previous readings in half.
3. Beginning July 1983, under the revised Regulation T, margin credit at broker-dealers includes credit extended against stocks, convertible bonds, stocks acquired through exercise of subscription rights, corporate bonds, and government securities. Separate reporting of data for margin stocks, convertible bonds, and subscription issues was discontinued in April 1984.
4. Free credit balances are in accounts with no unfulfilled commitments to the brokers and are subject to withdrawal by customers on demand.
5. New series beginning June 1984.
6. These regulations, adopted by the Board of Governors pursuant to the Securities Exchange Act of 1934, limit the amount of credit to purchase and carry "margin securities" (as defined in the regulations) when such credit is collateralized by securities. Margin requirements on securities other than options are the difference between the market value (100 percent) and the maximum loan value of collateral as prescribed by the Board. Regulation T was adopted effective Oct. 15, 1934; Regulation U, effective May 1, 1936; Regulation G, effective Mar. 11, 1968; and Regulation X, effective Nov. 1, 1971.

On Jan. 1, 1977, the Board of Governors for the first time established in Regulation T the initial margin required for writing options on securities, setting it at 30 percent of the current market-value of the stock underlying the option. On Sept. 30, 1985, the Board changed the required initial margin, allowing it to be the same as the option maintenance margin required by the appropriate exchange or self-regulatory organization; such maintenance margin rules must be approved by the Securities and Exchange Commission. Effective Jan. 31, 1986, the SEC approved new maintenance margin rules, permitting margins to be the price of the option plus 15 percent of the market value of the stock underlying the option.

1. Contra-assets are credit-balance accounts that must be subtracted from the corresponding gross asset categories to yield net asset levels. Contra-assets to mortgage loans, contracts, and pass-through securities include loans in process, unearned discounts and deferred loan fees, valuation allowances for mortgages "held for sale," and specific reserves and other valuation allowances.
2. Contra-assets are credit-balance accounts that must be subtracted from the corresponding gross asset categories to yield net asset levels. Contra-assets to nonmortgage loans include loans in process, unearned discounts and deferred loan fees, and specific reserves and valuation allowances.
3. Holding of stock in Federal Home Loan Bank and Finance leases plus interest are included in "Other" (line 9).
4. Excludes checking, club, and school accounts.
5. Data include all federally insured credit unions, both federal and state chartered, serving natural persons.
6. Direct and guaranteed obligations. Excludes federal agency issues not guaranteed, which are shown in the table under "Business" securities.
7. Issues of foreign governments and their subdivisions and bonds of the International Bank for Reconstruction and Development.

NOTE. *FSLIC-insured institutions:* Estimates by the FHLBB for all institutions insured by the FSLIC and based on the FHLBB thrift Financial Report.

FSLIC-insured federal savings banks: Estimates by the FHLBB for federal savings banks insured by the FSLIC and based on the FHLBB thrift Financial Report.

Savings banks: Estimates by the National Council of Savings Institutions for all savings banks in the United States and for FDIC-insured savings banks that have converted to federal savings banks.

Credit unions: Estimates by the National Credit Union Administration for federally chartered and federally insured state-chartered credit unions serving natural persons.

Life insurance companies: Estimates of the American Council of Life Insurance for all life insurance companies in the United States. Annual figures are annual-statement asset values, with bonds carried on an amortized basis and stocks at year-end market value. Adjustments for interest due and accrued and for differences between market and book values are not made on each item separately but are included, in total, in "other assets."

1. In accordance with the Balanced Budget and Emergency Deficit Control Act of 1985, all former off-budget entries are now presented on-budget. The Federal Financing Bank (FFB) activities are now shown as separate accounts under the agencies that use the FFB to finance their programs. The act has also moved two social security trust funds (Federal old-age survivors insurance and Federal disability insurance trust funds) off-budget.

2. Includes SDRs; reserve position on the U.S. quota in the IMF; loans to international monetary fund; other cash and monetary assets; accrued interest payable to the public; allocations of special drawing rights; deposit funds; miscellaneous liability (including checks outstanding) and asset accounts; seigniorage; increment on gold; net gain/loss for U.S. currency valuation adjustment; net gain/loss for IMF valuation adjustment; and profit on the sale of gold.

1. Functional details do not add to total outlays for calendar year data because revisions to monthly totals have not been distributed among functions. Fiscal year total for outlays does not correspond to calendar year data because revisions from the *Budget* have not been fully distributed across months.
2. Old-age, disability, and hospital insurance, and railroad retirement accounts.
3. Old-age, disability, and hospital insurance.
4. Federal employee retirement contributions and civil service retirement and disability fund.
5. Deposits of earnings by Federal Reserve Banks and other miscellaneous receipts.
6. Net interest function includes interest received by trust funds.
7. Consists of rents and royalties on the outer continental shelf and U.S. government contributions for employee retirement.

SOURCES. U.S. Department of the Treasury, *Monthly Treasury Statement of Receipts and Outlays of the U.S. Government*, and the U.S. Office of Management and Budget, *Budget of the U.S. Government, Fiscal Year 1990*.

1. Transactions are market purchases and sales of securities as reported to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers.

Averages for transactions are based on the number of trading days in the period. The figures exclude allotments of, and exchanges for, new U.S. Treasury securities, redemptions of called or matured securities, purchases or sales of securities under repurchase agreement, reverse repurchase (resale), or similar contracts.

2. Data for immediate transactions do not include forward transactions.

3. Includes, among others, all other dealers and brokers in commodities and securities, nondealer departments of commercial banks, foreign banking agencies, and the Federal Reserve System.

4. Futures contracts are standardized agreements arranged on an organized exchange in which parties commit to purchase or sell securities for delivery at a future date.

5. Forward transactions are agreements arranged in the over-the-counter market in which securities are purchased (sold) for delivery after 5 business days from the date of the transaction for Treasury securities (Treasury bills, notes, and bonds) or after 30 days for mortgage-backed agency issues.

1. Data for dealer positions and sources of financing are obtained from reports submitted to the Federal Reserve Bank of New York by the U.S. Treasury securities dealers on its published list of primary dealers.

Data for positions are averages of daily figures, in terms of par value, based on the number of trading days in the period. Positions are net amounts and are shown on a commitment basis. Data for financing are in terms of actual amounts borrowed or lent and are based on Wednesday figures.

2. Immediate positions are net amounts (in terms of par values) of securities owned by nonbank dealer firms and dealer departments of commercial banks on a commitment, that is, trade-date basis, including any such securities that have been sold under agreements to repurchase (RPs). The maturities of some repurchase agreements are sufficiently long, however, to suggest that the securities involved are not available for trading purposes. Immediate positions include reverses to maturity, which are securities that were sold after having been obtained under reverse repurchase agreements that mature on the same day as the securities. Data for immediate positions do not include forward positions.

3. Figures cover financing involving U.S. Treasury and federal agency securities, negotiable CDs, bankers acceptances, and commercial paper.

4. Includes all reverse repurchase agreements, including those that have been arranged to make delivery on short sales and those for which the securities obtained have been used as collateral on borrowings, that is, matched agreements.

5. Includes both repurchase agreements undertaken to finance positions and "matched book" repurchase agreements.

NOTE. Data on positions for the period May 1 to Sept. 30, 1986, are partially estimated.

1. Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.
2. Includes participation certificates reclassified as debt beginning Oct. 1, 1976.
3. Off-budget Aug. 17, 1974, through Sept. 30, 1976; on-budget thereafter.
4. Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the securities market.
5. Certificates of participation issued before fiscal 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration; Department of Health, Education, and Welfare; Department of Housing and Urban Development; Small Business Administration; and the Veterans Administration.
6. Off-budget.
7. Includes outstanding noncontingent liabilities: notes, bonds, and debentures. Some data are estimated.
8. Excludes borrowing by the Farm Credit Financial Assistance Corporation, shown in line 17.
9. Before late 1981, the Association obtained financing through the Federal Financing Bank (FFB). Borrowing excludes that obtained from the FFB, which is shown on line 21.
10. The Financing Corporation, established in August 1987 to recapitalize the Federal Savings and Loan Insurance Corporation, undertook its first borrowing in October 1987.
11. The Farm Credit Financial Assistance Corporation (established in January 1988 to provide assistance to the Farm Credit System) undertook its first borrowing in July 1988.
12. The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other federal agencies. Since FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table in order to avoid double counting.
13. Includes FFB purchases of agency assets and guaranteed loans; the latter contain loans guaranteed by numerous agencies with the guarantees of any particular agency being generally small. The Farmers Home Administration item consists exclusively of agency assets, while the Rural Electrification Administration entry contains both agency assets and guaranteed loans.

1. Figures which represent gross proceeds of issues maturing in more than one year, are principal amount or number of units multiplied by offering price. Excludes secondary offerings, employee stock plans, investment companies other than closed-end, intracorporate transactions, equities sold abroad, and Yankee bonds. Stock data include ownership securities issued by limited partnerships.
2. Monthly data include only public offerings.
3. Data are not available on a monthly basis. Before 1987, annual totals include underwritten issues only.

SOURCES. IDD Information Services, Inc., the Board of Governors of the Federal Reserve System, and before 1989, the U.S. Securities and Exchange Commission.

1.47 OPEN-END INVESTMENT COMPANIES Net Sales and Asset Position

Millions of dollars

Item	1987	1988	1988	1989						
			Dec.	Jan.	Feb.	Mar.	Apr.	May	June^r	July
INVESTMENT COMPANIES[1]

1. Data on sales and redemptions exclude money market mutual funds but include limited maturity municipal bond funds. Data on asset positions exclude both money market mutual funds and limited maturity municipal bond funds.
2. Includes reinvestment of investment income dividends. Excludes reinvestment of capital gains distributions and share issue of conversions from one fund to another in the same group.
3. Excludes share redemption resulting from conversions from one fund to another in the same group.
4. Market value at end of period, less current liabilities.
5. Also includes all U.S. government securities and other short-term debt securities.

NOTE. Investment Company Institute data based on reports of members, which comprise substantially all open-end investment companies registered with the Securities and Exchange Commission. Data reflect newly formed companies after their initial offering of securities.

22 Contracted (during period)	110,855	71,467	66,026	8,411	11,227	4,196	5,186	n.a.	n.a.	n.a.

1. Weighted averages based on sample surveys of mortgages originated by major institutional lender groups; compiled by the Federal Home Loan Bank Board in cooperation with the Federal Deposit Insurance Corporation.
2. Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) to obtain a loan.
3. Average effective interest rates on loans closed, assuming prepayment at the end of 10 years.
4. Average contract rates on new commitments for conventional first mortgages; from Department of Housing and Urban Development.
5. Average gross yields on 30-year, minimum-downpayment, Federal Housing Administration-insured first mortgages for immediate delivery in the private secondary market. Based on transactions on first day of subsequent month. Large monthly movements in average yields may reflect market adjustments to changes in maximum permissable contract rates.
6. Average net yields to investors on Government National Mortgage Association guaranteed, mortgage-backed, fully modified pass-through securities, assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the prevailing ceiling rate. Monthly figures are averages of Friday figures from the *Wall Street Journal*.
7. Includes some multifamily and nonprofit hospital loan commitments in addition to 1- to 4-family loan commitments accepted in FNMA's free market auction system, and through the FNMA-GNMA tandem plans.
8. Includes participation as well as whole loans.
9. Includes conventional and government-underwritten loans. FHLMC's mortgage commitments and mortgage transactions include activity under mortgage/securities swap programs, while the corresponding data for FNMA exclude swap activity.

1. Based on data from various institutional and governmental sources, with some quarters estimated in part by the Federal Reserve. Multifamily debt refers to loans on structures of five or more units.
2. Includes loans held by nondeposit trust companies but not bank trust departments.
3. Includes savings banks and savings and loan associations. Beginning 1987:1, data reported by FSLIC-insured institutions include loans in process and other contra assets (credit balance accounts that must be subtracted from the corresponding gross asset categories to yield net asset levels).
4. Assumed to be entirely 1- to 4-family loans.
5. FmHA-guaranteed securities sold to the Federal Financing Bank were reallocated from FmHA mortgage pools to FmHA mortgage holdings in 1986:4, because of accounting changes by the Farmers Home Administration.
6. Outstanding principal balances of mortgage pools backing securities insured or guaranteed by the agency indicated. Includes private pools which are not shown as a separate line item.
7. Other holders include mortgage companies, real estate investment trusts, state and local credit agencies, state and local retirement funds, noninsured pension funds, credit unions, and other U.S. agencies.

1. The Board's series cover most short- and intermediate-term credit extended to individuals that is scheduled to be repaid (or has the option of repayment) in two or more installments.
These data also appear in the Board's G.19 (421) release. For address, see inside front cover.

2. More detail for finance companies is available in the G. 20 statistical release.
3. Excludes 30-day charge credit held by travel and entertainment companies.
4. Outstanding balances of pools upon which securities have been issued; these balances are no longer carried on the balance sheets of the loan originator.

NOTES BY LINE NUMBER.
1. Line 1 of table 1.57.
2. Sum of lines 3–6 or 7–10.
6. Includes farm and commercial mortgages.
11. Credit market funds raised by federally sponsored credit agencies, and net issues of federally related mortgage pool securities.
13. Line 1 less line 2 plus line 11 and 12. Also line 20 less line 27 plus line 33. Also sum of lines 28 and 47 less lines 40 and 46.
18. Includes farm and commercial mortgages.
26. Line 39 less lines 40 and 46.
27. Excludes equity issues and investment company shares. Includes line 19.
29. Foreign deposits at commercial banks, bank borrowings from foreign branches, and liabilities of foreign banking agencies to foreign affiliates, less claims on foreign affiliates and deposits by banking in foreign banks.
30. Demand deposits and note balances at commercial banks.
31. Excludes net investment of these reserves in corporate equities.
32. Mainly retained earnings and net miscellaneous liabilities.
33. Line 13 less line 20 plus line 27.
34–38. Lines 14–18 less amounts acquired by private finance plus amounts borrowed by private finance. Line 38 includes mortgages.
40. Mainly an offset to line 9.
47. Lines 33 plus 39, or line 13 less line 28 plus 40 and 46.
48. Line 2/line 1.
49. Line 20/line 13.
50. Sum of lines 10 and 29.
51, 53. Includes issues by financial institutions.

NOTE. Full statements for sectors and transaction types in flows and in amounts outstanding may be obtained from Flow of Funds Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

Notes by line number.

1. Line 1 of table 1.59.
2. Sum of lines 3–6 or 7–10.
6. Includes farm and commercial mortgages.
12. Credit market debt of federally sponsored agencies, and net issues of federally related mortgage pool securities.
14. Line 1 less line 2 plus line 12 and 13. Also line 21 less line 28 plus line 34. Also sum of lines 29 and 48 less lines 41 and 47.
19. Includes farm and commercial mortgages.
27. Line 40 less lines 41 and 47.
28. Excludes equity issues and investment company shares. Includes line 20.
30. Foreign deposits at commercial banks plus bank borrowings from foreign affiliates, less claims on foreign affiliates and deposits by banking in foreign banks.
31. Demand deposits and note balances at commercial banks.
32. Excludes net investment of these reserves in corporate equities.
33. Mainly retained earnings and net miscellaneous liabilities.
34. Line 14 less line 21 plus line 28.
35–39. Lines 15–19 less amounts acquired by private finance plus amounts borrowed by private finance. Line 39 includes mortgages.
41. Mainly an offset to line 10.
48. Lines 34 plus 40, or line 14 less line 29 plus 41 and 47.
49. Line 2/line 1 and 13.
50. Line 21/line 14.
51. Sum of lines 11 and 30.
52–54. Includes issues by financial institutions.

Note. Full statements for sectors and transaction types in flows and in amounts outstanding may be obtained from Flow of Funds Section, Stop 95, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

1. A major revision of the industrial production index and the capacity utilization rates was released in July 1985. See "A Revision of the Index of Industrial Production" and accompanying tables that contain revised indexes (1977=100) through December 1984 in the FEDERAL RESERVE BULLETIN, vol. 71 (July 1985), pp. 487–501. The revised indexes for January through June 1985 were shown in the September BULLETIN.

2. Ratios of indexes of production to indexes of capacity. Based on data from Federal Reserve, McGraw-Hill Economics Department, Department of Commerce, and other sources.

3. Index of dollar value of total construction contracts, including residential, nonresidential and heavy engineering, from McGraw-Hill Information Systems Company, F. W. Dodge Division.

4. Based on data in *Employment and Earnings* (U.S. Department of Labor). Series covers employees only, excluding personnel in the Armed Forces.

5. Based on data in *Survey of Current Business* (U.S. Department of Commerce).

6. Based on Bureau of Census data published in *Survey of Current Business*.

7. Data without seasonal adjustment, as published in *Monthly Labor Review*. Seasonally adjusted data for changes in the price indexes may be obtained from the Bureau of Labor Statistics, U.S. Department of Labor.

NOTE. Basic data (not index numbers) for series mentioned in notes 4, 5,and 6, and indexes for series mentioned in notes 3 and 7 may also be found in the *Survey of Current Business*.

Figures for industrial production for the last two months are preliminary and estimated, respectively.

2.11 LABOR FORCE, EMPLOYMENT, AND UNEMPLOYMENT

Thousands of persons; monthly data are seasonally adjusted. Exceptions noted.

1. Persons 16 years of age and over. Monthly figures, which are based on sample data, relate to the calendar week that contains the 12th day; annual data are averages of monthly figures. By definition, seasonality does not exist in population figures. Based on data from *Employment and Earnings* (U.S. Department of Labor).

2. Includes self-employed, unpaid family, and domestic service workers.

3. Data include all full- and part-time employees who worked during, or received pay for, the pay period that includes the 12th day of the month, and exclude proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the Armed Forces. Data are adjusted to the March 1984 benchmark and only seasonally adjusted data are available at this time. Based on data from *Employment and Earnings* (U.S. Department of Labor).

2.12 OUTPUT, CAPACITY, AND CAPACITY UTILIZATION[1]

1. These data also appear in the Board's G.12.3 (414) release. For address, see inside front cover.

A major revision of the industrial production index and the capacity utilization rates was released in July 1985. See "A Revision of the Index of Industrial Production" and accompanying tables that contain revised indexes (1977=100) through December 1984 in the FEDERAL RESERVE BULLETIN, vol. 71 (July 1985), pp. 487–501. The revised indexes for January through June 1985 were shown in the September BULLETIN.

2.14 HOUSING AND CONSTRUCTION

Monthly figures are at seasonally adjusted annual rates except as noted.

1. Not at annual rates.
2. Not seasonally adjusted.
3. Value of new construction data in recent periods may not be strictly comparable with data in previous periods because of changes by the Bureau of the Census in its estimating techniques. For a description of these changes see *Construction Reports* (C-30-76-5), issued by the Bureau in July 1976.

NOTE. Census Bureau estimates for all series except (1) mobile homes, which are private, domestic shipments as reported by the Manufactured Housing Institute and seasonally adjusted by the Census Bureau, and (2) sales and prices of existing units, which are published by the National Association of Realtors. All back and current figures are available from the originating agency. Permit authorizations are those reported to the Census Bureau from 16,000 jurisdictions beginning with 1978.

MEMO								
Changes in official assets								
38 U.S. official reserve assets (increase, -)	312	9,149	-3,566	39	-7,380	2,272	-4,000	-12,095
39 Foreign official assets in United States (increase, +) excluding line 25	33,453	47,713	40,166	6,412	-2,002	10,821	7,781	-5,344
40 Change in Organization of Petroleum Exporting Countries official assets in United States (part of line 22 above)	-9,327	-9,955	-3,109	-1,776	-459	672	7,143	281
41 Transfers under military grant programs (excluded from lines 4, 6, and 10 above)	96	53	92	4	7	40	12	14

1. Seasonal factors are not calculated for lines 6, 10, 12–16, 18–20, 22–34, and 38–41.
2. Data are on an international accounts (IA) basis. Differs from the Census basis data, shown in table 3.11, for reasons of coverage and timing. Military exports are excluded from merchandise data and are included in line 6.
3. Reporting banks include all kinds of depository institutions besides commercial banks, as well as some brokers and dealers.
4. Primarily associated with military sales contracts and other transactions arranged with or through foreign official agencies.
5. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

NOTE. Data are from Bureau of Economic Analysis, *Survey of Current Business* (Department of Commerce).

3.11 U.S. FOREIGN TRADE[1]

Millions of dollars; monthly data are seasonally adjusted.

Item	1986	1987	1988	1989 Jan.	Feb.	Mar.	Apr.	May	June[r]	July[p]
1 EXPORTS of domestic and foreign merchandise excluding grant-aid shipments, f.a.s. value	227,159	254,122	322,426	28,980	28,839	30,065	30,759	30,455	31,286	30,736
GENERAL IMPORTS including merchandise for immediate consumption plus entries into bonded warehouses										
2 Customs value	365,438	406,241	440,952	37,877	38,220	39,549	39,045	40,534	39,293	38,317
Trade balance										
3 **Customs value**	**−138,279**	**−152,119**	**−118,526**	**−8,897**	**−9,381**	**−9,484**	**−8,286**	**−10,079**	**−8,007**	**−7,581**

1. The Census basis data differ from merchandise trade data shown in table 3.10, U.S. International Transactions Summary, for reasons of coverage and timing. On the *export side*, the largest adjustment is the exclusion of military sales (which are combined with other military transactions and reported separately in the "service account" in table 3.10, line 6). On the *import side*, additions are made for gold, ship purchases, imports of electricity from Canada, and other transactions; military payments are excluded and shown separately as indicated above. As of Jan. 1, 1987 census data are released 45 days after the end of the month; the previous month is revised to reflect late documents. Total exports and the trade balance reflect adjustments for undocumented exports to Canada.

SOURCE. FT900 "Summary of U.S. Export and Import Merchandise Trade" (Department of Commerce, Bureau of the Census).

3.12 U.S. RESERVE ASSETS

Millions of dollars, end of period

Type	1986	1987	1988	1989 Feb.	Mar.	Apr.	May	June	July	Aug.[p]
1 **Total**	**48,511**	**45,798**	**47,802**	**49,373**	**49,854**	**50,303**	**54,941**	**60,502**	**63,462**	**62,364**
2 Gold stock, including Exchange Stabilization Fund[1]	11,064	11,078	11,057	11,061	11,061	11,061	11,060	11,063	11,066	11,066
3 Special drawing rights[2,3]	8,395	10,283	9,637	9,653	9,443	9,379	9,134	9,034	9,340	9,240
4 Reserve position in International Monetary Fund[2]	11,730	11,349	9,745	9,353	9,052	9,132	8,513	8,888	9,055	8,644
5 Foreign currencies[4]	17,322	13,088	17,363	19,306	20,298	20,731	26,234	31,517	34,001	33,413

1. Gold held under earmark at Federal Reserve Banks for foreign and international accounts is not included in the gold stock of the United States; see table 3.13. Gold stock is valued at $42.22 per fine troy ounce.
2. Beginning July 1974, the IMF adopted a technique for valuing the SDR based on a weighted average of exchange rates for the currencies of member countries. From July 1974 through December 1980, 16 currencies were used; from January 1981, 5 currencies have been used. The U.S. SDR holdings and reserve position in the IMF also are valued on this basis beginning July 1974.
3. Includes allocations by the International Monetary Fund of SDRs as follows: $867 million on Jan. 1, 1970; $717 million on Jan. 1, 1971; $710 million on Jan. 1, 1972; $1,139 million on Jan. 1, 1979; $1,152 million on Jan. 1, 1980; and $1,093 million on Jan. 1, 1981; plus transactions in SDRs.
4. Valued at current market exchange rates.

3.13 FOREIGN OFFICIAL ASSETS HELD AT FEDERAL RESERVE BANKS[1]

Millions of dollars, end of period

Assets	1986	1987	1988	1989 Feb.	Mar.	Apr.	May	June	July	Aug.[p]
1 Deposits	287	244	347	325	351	352	428	275	371	265
Assets held in custody										
2 U.S. Treasury securities[2]	155,835	195,126	232,547	230,860	234,075	235,145	232,004	229,914	233,170	238,007
3 Earmarked gold[3]	14,048	13,919	13,636	13,609	13,602	13,576	13,612	13,545	13,530	13,516

1. Excludes deposits and U.S. Treasury securities held for international and regional organizations.
2. Marketable U.S. Treasury bills, notes, and bonds; and nonmarketable U.S. Treasury securities payable in dollars and in foreign currencies.
3. Earmarked gold and the gold stock are valued at $42.22 per fine troy ounce. Earmarked gold is gold held for foreign and international accounts and is not included in the gold stock of the United States.

1. Includes the Bank for International Settlements.
2. Principally demand deposits, time deposits, bankers acceptances, commercial paper, negotiable time certificates of deposit, and borrowings under repurchase agreements.
3. Includes nonmarketable certificates of indebtedness (including those payable in foreign currencies through 1974) and Treasury bills issued to official institutions of foreign countries.
4. Excludes notes issued to foreign official nonreserve agencies. Includes bonds and notes payable in foreign currencies.
5. Debt securities of U.S. government corporations and federally sponsored agencies, and U.S. corporate stocks and bonds.
6. Includes countries in Oceania and Eastern Europe.

NOTE. Based on Treasury Department data and on data reported to the Treasury Department by banks (including Federal Reserve Banks) and securities dealers in the United States.

3.16 LIABILITIES TO AND CLAIMS ON FOREIGNERS Reported by Banks in the United States Payable in Foreign Currencies[1]

Millions of dollars, end of period

Item	1985	1986	1987	1988			1989
				June	Sept.	Dec.	Mar.
1 Banks' own liabilities	15,368	29,702	55,438	56,570	65,148	74,776	76,164
2 Banks' own claims	16,294	26,180	51,271	52,914	63,465	68,988	72,659
3 Deposits	8,437	14,129	18,861	18,790	22,594	25,115	25,645
4 Other claims	7,857	12,052	32,410	34,124	40,871	43,874	47,014
5 Claims of banks' domestic customers[2]	580	2,507	551	1,004	335	364	376

1. Data on claims exclude foreign currencies held by U.S. monetary authorities.
2. Assets owned by customers of the reporting bank located in the United States that represent claims on foreigners held by reporting banks for the accounts of the domestic customers.

3.17 LIABILITIES TO FOREIGNERS Reported by Banks in the United States[1]
Payable in U.S. dollars

Millions of dollars, end of period

1. Reporting banks include all kinds of depository institutions besides commercial banks, as well as some brokers and dealers.
2. Excludes negotiable time certificates of deposit, which are included in "Other negotiable and readily transferable instruments."
3. Includes borrowing under repurchase agreements.
4. U.S. banks: includes amounts due to own foreign branches and foreign subsidiaries consolidated in "Consolidated Report of Condition" filed with bank regulatory agencies. Agencies, branches, and majority-owned subsidiaries of foreign banks: principally amounts due to head office or parent foreign bank, and foreign branches, agencies, or wholly owned subsidiaries of head office or parent foreign bank.
5. Financial claims on residents of the United States, other than long-term securities, held by or through reporting banks.
6. Includes nonmarketable certificates of indebtedness and Treasury bills issued to official institutions of foreign countries.
7. Principally bankers acceptances, commercial paper, and negotiable time certificates of deposit.
8. Principally the International Bank for Reconstruction and Development, and the Inter-American and Asian Development Banks. Data exclude "holdings of dollars" of the International Monetary Fund.
9. Foreign central banks, foreign central governments, and the Bank for International Settlements.
10. Excludes central banks, which are included in "Official institutions."

1. Data for banks' own claims are given on a monthly basis, but the data for claims of banks' own domestic customers are available on a quarterly basis only. Reporting banks include all kinds of depository institutions besides commercial banks, as well as some brokers and dealers.
2. *U.S. banks:* includes amounts due from own foreign branches and foreign subsidiaries consolidated in "Consolidated Report of Condition" filed with bank regulatory agencies. *Agencies, branches, and majority-owned subsidiaries of foreign banks:* principally amounts due from head office or parent foreign bank, and foreign branches, agencies, or wholly owned subsidiaries of head office or parent foreign bank.
3. Assets owned by customers of the reporting bank located in the United States that represent claims on foreigners held by reporting banks for the account of their domestic customers.
4. Principally negotiable time certificates of deposit and bankers acceptances.
5. Includes demand and time deposits and negotiable and nonnegotiable certificates of deposit denominated in U.S. dollars issued by banks abroad. For description of changes in data reported by nonbanks, see July 1979 BULLETIN, p. 550.

3.20 BANKS' OWN CLAIMS ON UNAFFILIATED FOREIGNERS Reported by Banks in the United States[1] Payable in U.S. Dollars

Millions of dollars, end of period

1. The banking offices covered by these data are the U.S. offices and foreign branches of U.S.-owned banks and of U.S. subsidiaries of foreign-owned banks. Offices *not* covered include (1) U.S. agencies and branches of foreign banks, and (2) foreign subsidiaries of U.S. banks. To minimize duplication, the data are adjusted to exclude the claims on foreign branches held by a U.S. office or another foreign branch of the same banking institution. The data in this table combine foreign branch claims in table 3.14 (the sum of lines 7 through 10) with the claims of U.S. offices in table 3.18 (excluding those held by agencies and branches of foreign banks and those constituting claims on own foreign branches).

2. Beginning with June 1984 data, reported claims held by foreign branches have been reduced by an increase in the reporting threshold for "shell" branches from $50 million to $150 million equivalent in total assets, the threshold now applicable to all reporting branches.

3. This group comprises the Organization of Petroleum Exporting Countries shown individually, other members of OPEC (Algeria, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, and United Arab Emirates), and Bahrain and Oman (not formally members of OPEC).

4. Excludes Liberia.

5. Includes Canal Zone beginning December 1979.

6. Foreign branch claims only.

7. Includes New Zealand, Liberia, and international and regional organizations.

1. For a description of the changes in the International Statistics tables, see July 1979 BULLETIN, p. 550.
2. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).
3. Comprises Algeria, Gabon, Libya, and Nigeria.
4. Includes nonmonetary international and regional organizations.
5. Revisions include a reclassification of transactions, which also affects the totals for Asia and the grand totals.

3.23 CLAIMS ON UNAFFILIATED FOREIGNERS Reported by Nonbanking Business Enterprises in the United States[1]

28 Africa[4]	16	1	0	0	0	0	0	0	0	0

1. Estimated official and private transactions in marketable U.S. Treasury securities with an original maturity of more than 1 year. Data are based on monthly transactions reports. Excludes nonmarketable U.S. Treasury bonds and notes held by official institutions of foreign countries.
2. Includes U.S. Treasury notes publicly issued to private foreign residents denominated in foreign currencies.
3. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).
4. Comprises Algeria, Gabon, Libya, and Nigeria.

3.26 DISCOUNT RATES OF FOREIGN CENTRAL BANKS

Percent per year

Country	Rate on Sept. 30, 1989		Country	Rate on Sept. 30, 1989		Country	Rate on Sept. 30, 1989	
	Percent	Month effective		Percent	Month effective		Percent	Month effective
Austria	6.0	June 1989	France[1]	8.75	June 1989	Norway	8.0	June 1983
Belgium	9.25	June 1989	Germany, Fed. Rep. of	5.0	June 1989	Switzerland	5.5	July 1989
Brazil	49.0	Mar. 1981	Italy	13.5	Mar. 1989	United Kingdom[2]	....	....
Canada	12.47	Sept. 1989	Japan	3.25	May 1989	Venezuela	8.0	Oct. 1985
Denmark	8.0	June 1989	Netherlands	6.0	June 1989			

1. As of the end of February 1981, the rate is that at which the Bank of France discounts Treasury bills for 7 to 10 days.
2. Minimum lending rate suspended as of Aug. 20, 1981.

NOTE. Rates shown are mainly those at which the central bank either discounts or makes advances against eligible commercial paper and/or government commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which it is understood the central bank transacts the largest proportion of its credit operations.

3.27 FOREIGN SHORT-TERM INTEREST RATES

Percent per year, averages of daily figures

Country, or type	1986	1987	1988	1989 Mar.	Apr.	May	June	July	Aug.	Sept.

1. Averages of certified noon buying rates in New York for cable transfers. Data in this table also appear in the Board's G.5 (405) release. For address, see inside front cover.
2. Value in U.S. cents.
3. Index of weighted-average exchange value of U.S. dollar against the currencies of 10 industrial countries. The weight for each of the 10 countries is the 1972–76 average world trade of that country divided by the average world trade of all 10 countries combined. Series revised as of August 1978 (see FEDERAL RESERVE BULLETIN, vol. 64, August 1978, p. 700).

Guide to Tabular Presentation, Statistical Releases, and Special Tables

GUIDE TO TABULAR PRESENTATION

Symbols and Abbreviations

c	Corrected	0	Calculated to be zero
e	Estimated	n.a.	Not available
p	Preliminary	n.e.c.	Not elsewhere classified
r	Revised (Notation appears on column heading when about half of the figures in that column are changed.)	IPCs	Individuals, partnerships, and corporations
*	Amounts insignificant in terms of the last decimal place shown in the table (for example, less than 500,000 when the smallest unit given is millions)	REITs	Real estate investment trusts
		RPs	Repurchase agreements
		SMSAs	Standard metropolitan statistical areas
		. . .	Cell not applicable

General Information

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

"U.S. government securities" may include guaranteed issues of U.S. government agencies (the flow of funds figures also include not fully guaranteed issues) as well as direct obligations of the Treasury. "State and local government" also includes municipalities, special districts, and other political subdivisions.

In some of the tables, details do not add to totals because of rounding.

STATISTICAL RELEASES—*List Published Semiannually, with Latest Bulletin Reference*

SPECIAL TABLES—*Published Irregularly, with Latest Bulletin Reference*

Special tables begin on page A73.

4.23 TERMS OF LENDING AT COMMERCIAL BANKS Survey of Loans Made, August 7–11, 1989[1]

20 Other	5.0	3.8	*	*	*	*	*

*Fewer than 10 sample loans.

1. The survey of terms of bank lending to business collects data on gross loan extensions made during the first full business week in the mid-month of each quarter by a sample of 340 commercial banks of all sizes. A subsample of 250 banks also report loans to farmers. The sample data are blown up to estimate the lending terms at all insured commercial banks during that week. The estimated terms of bank lending are not intended for use in collecting the terms of loans extended over the entire quarter or residing in the portfolios of those banks. Mortgage loans, purchased loans, foreign loans, and loans of less than $1,000 are excluded from the survey.

As of Dec. 31, 1988, assets of most of the large banks were at least $6.0 billion. For all insured banks total assets averaged $220 million.

2. Average maturities are weighted by loan size and exclude demand loans.

3. Effective (compounded) annual interest rates are calculated from the stated rate and other terms of the loan and weighted by loan size.

4. The chances are about two out of three that the average rate shown would differ by less than this amount from the average rate that would be found by a complete survey of lending at all banks.

5. The interquartile range shows the interest rate range that encompasses the middle 50 percent of the total dollar amount of loans made.

6. The most common base rate is that rate used to price the largest dollar volume of loans. Base pricing rates include the prime rate (sometimes referred to as a bank's "basic" or "reference" rate); the federal funds rate; domestic money market rates other than the federal funds rate; foreign money market rates; and other base rates not included in the foregoing classifications.

7. Overnight loans are loans that mature on the following business day.

8. Demand loans have no stated date of maturity.

9. Nominal (not compounded) annual interest rates are calculated from survey data on the stated rate and other terms of the loan and weighted by loan size.

10. The prime rate reported by each bank is weighted by the volume of loans extended and then averaged.

11. The proportion of loans made at rates below prime may vary substantially from the proportion of such loans outstanding in banks' portfolios.

12. Among banks reporting loans to farmers (Table B), most "large banks" (survey strata 1 to 2) had over $20 million in farm loans, and most "other banks" (survey strata 3 to 5) had farm loans below $20 million.

The survey of terms of bank lending to farmers now includes loans secured by farm real estate. In addition, the categories describing the purpose of farm loans have now been expanded to include "purchase or improve farm real estate." In previous surveys, the purpose of such loans was reported as "other."

148 Market value of securities held	32,926	10,240	27,254	8,092	3,576	1,433	1,301	573
149 Immediately available funds with a maturity greater than one day included in other borrowed money	66,695	n.a.	38,413	n.a.	23,684	n.a.	3,227	n.a.
150 Number of reports filed[6]	531	....	248	....	127	....	53	....

1. Data are aggregates of categories reported on the quarterly form FFIEC 002, "Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks." Details may not add to totals because of rounding. This form was first used for reporting data as of June 30, 1980, and was revised as of December 31, 1985. From November 1972 through May 1980, U.S. branches and agencies of foreign banks had filed a monthly FR 886a report. Aggregate data from that report were available through the Federal Reserve statistical release G.11, last issued on July 10, 1980. Data in this table and in the G.11 tables are not strictly comparable because of differences in reporting panels and in definitions of balance sheet items.

2. Includes the District of Columbia.

3. *Effective December 1981*, the Federal Reserve Board amended Regulations D and Q to permit banking offices located in the United States to operate International Banking Facilities (IBFs). As of December 31, 1985 data for IBFs *are reported in a separate column*. These data are either included in or excluded from the total columns as indicated in the headings. The notation "n.a." indicates *that no IBF data re reported* for that item, either because the item is not an eligible IBF asset or liability or because that level of detail is not reported for IBFs. From December 1981 through September 1985, IBF data were included in all applicable *items reported*.

4. Total assets and total liabilities include *net* balances, if any, due from or due to related banking institutions in the United States and in foreign countries (see footnote 5). *On the former monthly branch and agencyu report*, available through the G.11 statistical release, *gross* balances were included in total assets and total liabilities. Therefopre, total asset and total liability figures in this table are not comparable to those *in the G.11 tables*.

5. "Related banking institutions" includes the foreign head office and other U.S. and foreign branches and agencies of the bank, the bank's parent holding company, and majority-owned banking *subsidiaries of the bank and of its parent* holding company (including subsidiaries owned both directly and indirectly).

6. In some cases two or more offices of a foreign bank within the same metropolitan area file a consolidated report.

Federal Reserve Board of Governors

ALAN GREENSPAN, *Chairman*
MANUEL H. JOHNSON, *Vice Chairman*
