FEDERAL RESERVE BOARD

Ex officio members:

A. W. MELLON,
Secretary of the Treasury, Chairman.
J. W. McINTOSH,
Comptroller of the Currency.

ROY A. YOUNG, *Governor.*
EDMUND PLATT, *Vice Governor.*
ADOLPH C. MILLER.
CHARLES S. HAMLIN.
GEORGE R. JAMES.
EDWARD H. CUNNINGHAM.

WALTER L. EDDY, *Secretary.*
J. C. NOELL, *Assistant Secretary.*
E. M. McCLELLAND, *Assistant Secretary.*
W. M. IMLAY, *Fiscal Agent.*
J. F. HERSON,
Chief, Division of Examination, and Chief Federal Reserve Examiner.

WALTER WYATT, *General Counsel.*
E. A. GOLDENWEISER, *Director, Division of Research and Statistics.*
CARL E. PARRY, *Assistant Director, Division of Research and Statistics.*
E. L. SMEAD, *Chief, Division of Bank Operations.*

SUBSCRIPTION PRICE OF BULLETIN

THE FEDERAL RESERVE BULLETIN is the board's medium of communication with member banks of the Federal reserve system and is the only official organ or periodical publication of the board. The BULLETIN will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is \$2. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, \$2.60; single copies, 25 cents.

FEDERAL RESERVE BULLETIN

VOL. 14

OCTOBER, 1928

No. 10

REVIEW OF THE MONTH

Loans and investments of member banks in leading cities have increased in recent weeks,

Recent credit trends. reflecting chiefly a renewed expansion of loans on securities.

Compared with last spring, however, the volume of loans and investments of these member banks is about \$280,000,000 lower. The decrease for this period has been entirely in the banks' holdings of investments and in their loans on securities, while all other loans increased and were at the end of September about \$350,000,000 above their level of a year ago and in larger volume than at any other time in the past seven years.

The seasonal growth in this class of loans began this year in the last week of July, which is the usual time, and the increase from then until the end of August was \$115,000,000. Since that time there has been some further growth in this class of loans. These figures indicate that credit has been available to the banks' commercial customers for their usual seasonal requirements. The cost of bank credit, however, has been higher than at any other time in the past seven years. The advance in money rates has been general for all classes of loans, the largest increase being in rates for call loans on securities. Other open-market rates have shown a smaller advance and rates charged by banks to their regular customers have advanced less than open-market rates. The rise in the cost of credit during the past year has been due chiefly to the loss of gold and the consequent heavy indebtedness of member banks to the reserve banks. During August and September there has been a further growth in the demand for reserve bank credit arising chiefly from the seasonal increase in the demand for currency.¹

¹ A special article on changes in the demand for currency appears on p. 684.

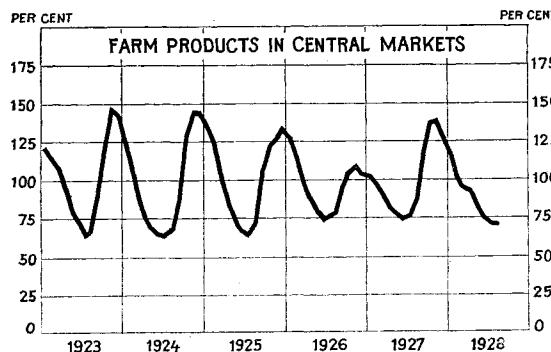

The additional reserve bank credit has been supplied largely through the purchase of acceptances in the open market, and up to the end of September the seasonal demands for currency have not resulted in an increase of the indebtedness of member banks to the reserve banks.

The seasonal growth in circulation reflected in part an increase in factory pay rolls and a demand for cash connected with the progress of the harvesting season. Increased demand for currency was until the middle of September the principal factor in the growth of demand for reserve bank credit, but in recent weeks there has also been an increase in member bank reserve requirements.

Growth of "all other" loans reported by member banks in leading cities in recent months reflected in part the usual autumn

Factors in demand for commercial credit. demand upon these banks for credit to finance the moving of farm products to market. The increase in this class of loans this year from the end of July to the end of September has been less than usual, however, partly because the harvesting of some of the major crops, particularly cotton, has been delayed by weather conditions. The late season has been reflected in the volume and value of commodities of agricultural origin in storage at the marketing centers. The value of these stocks of farm products was lower in July and August than at the same time last year or the year before, as is indicated by the chart, which shows by months for the period since the end of 1923 an index of the estimated value of farm products in storage at principal marketing centers. It is based on volume and price figures for 16 commodities for which satisfactory data are available. The chart also brings out the fact that in recent years these stocks have usually been at or close to their seasonal low point in July and have increased rapidly until November or December.

It is, therefore, during this period that increased demand for credit for carrying crops is an important factor in the movement of commercial loans of the reporting member banks. These loans usually reach their seasonal peak around the end of October. Commercial

Index of estimated value of 16 farm products in principal marketing centers at end of month. 1923-1925=100.

stocks of farm products continue to increase after that time, but there is usually a reduction in the demand for commercial credit from other sources, which more than offsets the demand for carrying crops, with the consequence that the total volume of commercial loans begins to decline.

Although the commercial loans of the reporting member banks have not increased during August and September of this year by as much as they usually do at this time, principally on account of the later harvesting season, indications are, in view of the expected yields of farm crops, that for the marketing season as a whole the demand for credit to finance the crop movement will not be appreciably less than it has been in other recent years. The September estimates of the Department of Agriculture indicate that the yields of most of the grain and feed crops will be abundant, the yield per acre of these crops being estimated at 3.3 per cent above the 10-year average. The total yield of wheat is estimated at 900,000,000 bushels, or more than 25,000,000 bushels above last year's production. The cotton crop this year, according to the official October estimate, will be about 8 per cent

larger than it was last year, when it was below the average. The indicated yield of corn, 2,930,000,000 bushels, is about 6 per cent larger than production in 1927 or the average production of the five years 1922-1926. Increase in production is largest in the main Corn Belt States, which is the reverse of the situation of last year, when Southern and Central Western States harvested yields above the average, while the Eastern States of the central Corn Belt had a short crop. The table below gives the September 1 estimates for the principal crops, compared with last year's production and with the average for the five years 1922-1926:

PRODUCTION OF FARM CROPS

[In millions of units]

Crop	Unit	Sept. 1, 1928, forecast	1927 crop	Average for 1922-1926
Wheat, total	Bushel	901	873	807
Winter	do	579	553	556
Spring	do	322	319	252
Corn	do	2,931	2,774	2,776
Cotton	Bale	114	13	13.5
Oats	Bushel	1,454	1,184	1,352
Tobacco	Pound	1,372	1,211	1,338
Potatoes, white	Bushel	467	407	394
Hay, tame	Ton	88	107	91

¹ October 1 forecast.

Prices of farm products, as measured by the general index of the Department of Agriculture,

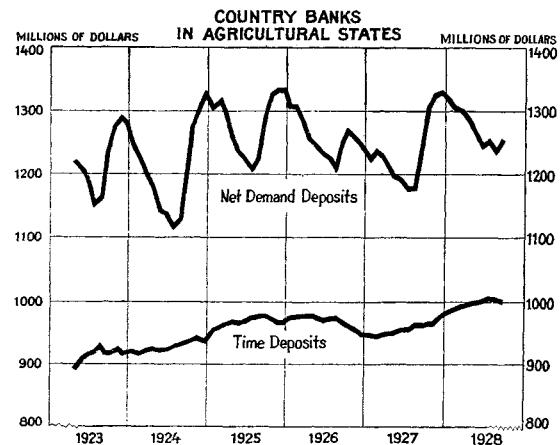

Prices of farm products computed from prices at the farm, after declining further in

August, rose slightly in September and continued, as in earlier months of this year, to be higher than a year ago. They were in September slightly higher than in 1927 and 5 per cent higher than in 1926. The decline from the relatively high level of last May reflects in part a decrease in the prices of wheat and cotton, due in considerable part to larger production of these crops than had been anticipated by the market. In September the price of wheat was lower than a year ago by about 20 per cent, and the price of cotton was lower by more than 20 per cent. Prices of livestock, on the other hand, have continued to advance to a general level 22 per cent above that of last year. The price of

cattle in September was the highest since 1919, and the price of hogs, after having declined to a low point early in the year, has more recently advanced to a level in September about 14 per cent higher than last year. Milk and butter are somewhat higher than in 1927. Estimated returns to farmers from the sale of livestock during the first eight months of the year increased by about 4 per cent from 1927 to 1928, larger returns from the sale of cattle, calves, and sheep more than offsetting smaller aggregate returns from hogs.

The relatively larger returns to agriculture from the operations of the past year, including

Position of the sale of crops and of live-
stock and dairy products, have
been reflected in a substantial
increase in the deposits of banks in agricultural
regions. Member banks in centers with less

Deposits of member banks in towns with a population of less than 15,000,
located in 21 agricultural States

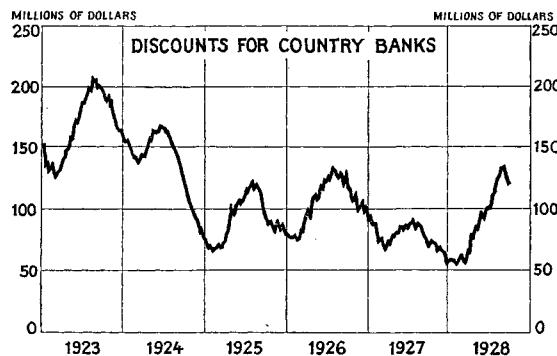

than 15,000 population in 21 agricultural States held in August, a time when these deposits are generally at the lowest level for the year, about \$2,240,000,000 in net demand and time deposits, considerably more than at the same season in any other recent year and about \$100,000,000 more than a year ago. The course of net demand and time deposits of these banks during the last five years is shown on the chart. The chart indicates that the increase in September of \$21,000,000 in net demand deposits marks the beginning of the

usual seasonal growth in deposits of country banks, an increase which usually continues until November or December.

This seasonal growth in deposits originates primarily in the sale of farm products by agricultural communities, but represents nevertheless chiefly the deposit in country banks of funds arising from loans made by city banks. The accumulation of stocks at marketing centers, which accompanies the movement of crops, results in increased requirements for bank accommodation by marketing agencies. These agencies borrow largely from city banks and use the funds thus obtained in payment for the crops purchased in the agricultural communities. These funds constitute the source of the seasonal growth in the deposits of country banks. These banks in turn are in a position to use the funds for reducing their indebtedness at the Federal reserve banks and to increase their own credit operations. The indebtedness of country banks to the reserve banks consequently decreases in the autumn, and their total loans and investments generally increase. At this season of the year, however, the demand for bank credit by local rural borrowers diminishes and reaches its seasonal low point, so that the country banks generally use the funds remaining after curtailment or liquidation of discounts with the reserve banks in increasing operations outside of their own communities. They accumulate larger balances with city correspondents, purchase acceptances and commercial paper from dealers, place loans on call or on time in the security market, and make more permanent investments in bonds or other securities.

Owing in considerable part to the lateness of the crop movement this year, especially for cotton, the indebtedness of country banks at the reserve banks rose to a higher level than in any other year since 1924. Reserve bank credit reached its seasonal peak considerably later than usual. This is indicated by the chart, which shows by weeks for the last six years the volume of discounts at Federal reserve banks for member

banks outside leading cities in eight Federal reserve districts that are largely agricultural in character. The chart shows that in consequence of the relatively favorable returns to

Weekly figures of paper discounted by Federal reserve banks for member banks outside weekly reporting cities in 8 Federal reserve districts (districts 5-12)

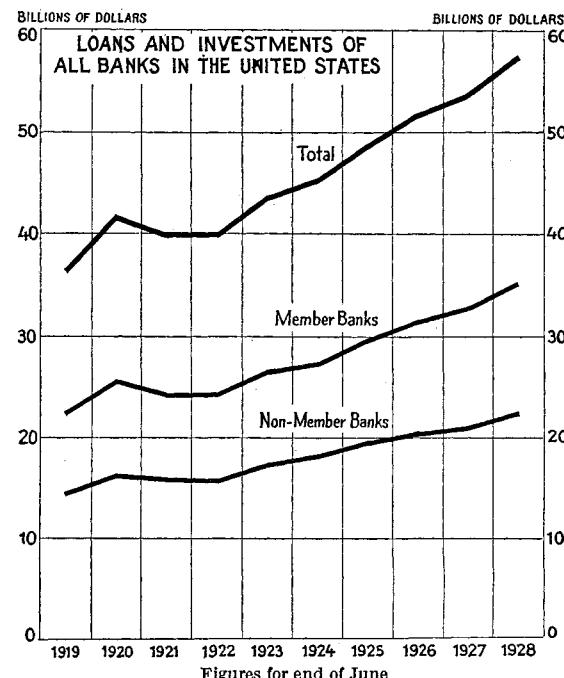

agriculture last year these banks reduced their indebtedness in February, 1928, to about \$55,000,000, a lower level than at any other time in recent years, and that the increase of about \$80,000,000 from that time until liquidation began in September was greater than in any other year since 1923. Recent reduction of demand for reserve bank credit from member banks in agricultural districts has been accompanied by a growth in the demand from other sources. Total volume of reserve bank credit outstanding, after a substantial decrease in July, increased during August and September to a level higher than in any other autumn month since 1921. The increase of \$130,000,000 reflected primarily an increased demand for currency, amounting to \$110,000,000, but also the growth of \$18,000,000 in member bank reserve balances.

CONDITION OF ALL BANKS IN THE UNITED STATES ON JUNE 30

Loans and investments of all banks in the United States—including national banks, State commercial banks, trust companies, mutual and stock savings banks, and private banks under State supervision—increased during the year ending June 30, 1928, by about \$3,480,000,000, or 6.5 per cent. This rate of increase was considerably larger than in either of the two

preceding years and slightly above the annual average (6.2 per cent) for the six fiscal years since the middle of 1922.

The chart shows the course of loans and investments of all banks, member banks, and nonmember banks since 1919, and the current figures are given in detail, by Federal reserve districts and by States, on pages 730-733. Loans and investments of all banks at the

end of June in each of the last 15 years and actual and percentage changes for each fiscal year are given in the accompanying table.

ALL BANKS IN THE UNITED STATES
[In millions of dollars]

End of June—	Loans and investments	Increase or decrease (-)	
		Amount	Per cent
1914	20,789		
1915	21,466	677	3.3
1916	24,587	3,121	14.5
1917	28,287	3,700	15.0
1918	31,813	3,526	12.5
1919	36,570	4,757	15.0
1920	41,685	5,115	14.0
1921	39,999	-1,686	-4.0
1922	39,956	-43	.1
1923	43,738	3,782	9.5
1924	45,180	1,442	3.3
1925	48,830	3,650	8.1
1926	51,562	2,732	5.6
1927	53,750	2,188	4.2
1928	57,233	3,483	6.5

¹ Revised.

During each of the last 14 fiscal years, with two exceptions, total loans and investments of all banks in the United States have shown increases. The exceptions are the fiscal year 1920-21, when bank credit declined by about \$1,700,000,000, and 1921-22, when it decreased very slightly. The total increase since the middle of 1922 has amounted to \$17,277,000,000, and the average increase per year has been about \$2,880,000,000. For the 14 years since the middle of 1914, including the period of rapid increase during the war, the annual rate of change of loans and investments of all banks has varied between an increase of 15 per cent (1916-17 and 1918-19) and a decrease of 4 per cent (1920-21).

Growth of bank credit during the latest fiscal year has been more rapid at member banks of the Federal reserve system, which have 61.3 per cent of the total loans and investments of all banks, than at nonmember banks. The increase for member banks, \$2,300,000,000, represented a rate of growth of 7 per cent, while that for nonmembers, \$1,180,000,000, was considerably less—5.6 per cent. The changes in loans and investments of different classes of banks are given in the accompanying table:

ALL BANKS IN THE UNITED STATES				
[Figures for end of June. Amounts in millions of dollars]				
	1928	1927	Increase	
			Amount	Percent
Loans and investments:				
All banks.....	57,233	53,750	3,483	6.5
Member banks, total.....	1 35,061	1 32,756	2,305	7.0
In leading cities.....	1 22,300	1 20,658	1,642	7.9
Outside leading cities.....	12,762	12,098	664	5.5
Nonmember banks.....	22,172	1 20,994	1,178	5.6
Total loans:				
All banks.....	39,446	1 37,360	2,086	5.6
Member banks, total.....	1 24,303	1 22,938	1,365	6.0
In leading cities.....	1 15,653	1 14,559	1,094	7.5
Outside leading cities.....	8,650	8,379	271	3.2
Nonmember banks.....	15,144	1 14,421	723	5.0
Total investments:				
All banks.....	17,787	1 16,391	1,396	8.6
Member banks, total.....	10,759	9,818	941	9.6
In leading cities.....	6,647	6,099	548	9.0
Outside leading cities.....	4,112	3,719	393	10.6
Nonmember banks.....	7,029	1 6,573	456	6.9

¹ Revised figures. Figures for loans exclude "acceptances of other banks and foreign bills of exchange or drafts sold with indorsement." This item (for member banks) amounted to \$436,000,000 in 1928 and \$211,000,000 in 1927.

There was a substantial increase during the year in both loans and investments for all the classes of banks shown in the table. The growth in the total and in loans was most rapid at reporting member banks in leading cities, while investment holdings showed the greatest rate of increase at member banks outside of the leading cities.

CHANGES IN DEMAND FOR CURRENCY IN THE UNITED STATES

Figures showing changes in the total volume of money in circulation from day to day and from week to week have recently become available as the result of compilations made by the Federal Reserve Board.¹ Prior to this figures of money in circulation were available only on a monthly basis as published by the United States Treasury.² The daily record of circulation shows that within a month and even within a week there are considerable fluctuations in the amount of currency in use and that average figures for weeks and months are much more representative of conditions than figures for a single date.³ Some of the principal de-

During this period there has been a regular movement of money into circulation in the latter part of each week and a regular return flow in the early part, with a large temporary increase over the two holidays—the Fourth of July and Labor Day. All of the weekly low points are on Wednesday, and almost all of the high points on Saturday. Corresponding figures for previous years indicate that this is the usual course, in fact, the almost invariable course, of the demand for currency during the week.

In 1927, for example, as brought out by Chart II, the average amount of money in circulation

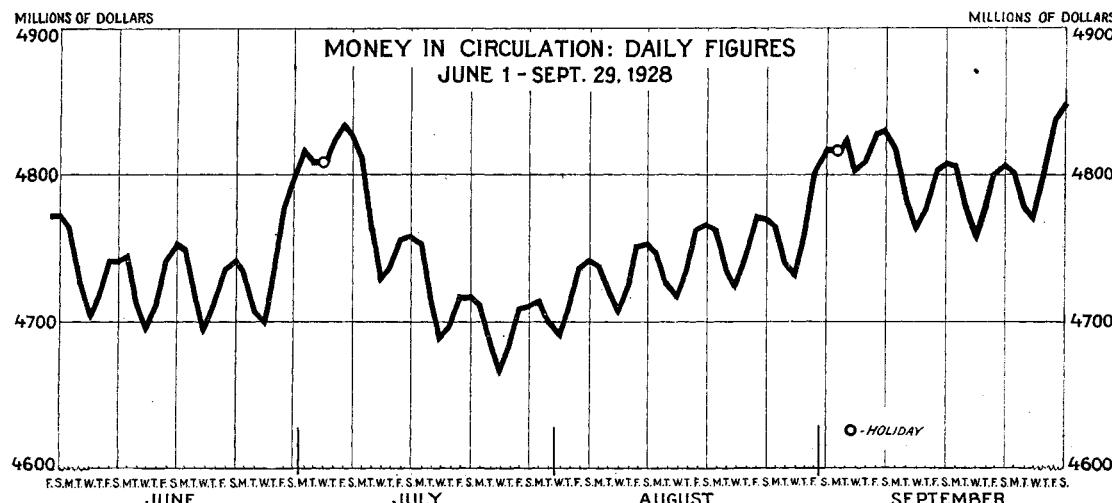

CHART I.—Figures are for each week day (excluding Sunday); holidays shown are Fourth of July and Labor Day

velopments brought out by the new figures are indicated in the following discussion.

Day-to-day changes in currency demand.—The general nature of the day-to-day changes in currency demand is indicated by Chart I, which shows the volume of currency in circulation, by days, during the last four months.

¹ Money "in circulation" is technically defined as all money outside of the Treasury and the Federal reserve banks. Thus the total of \$4,797,000,000 in circulation on June 30, 1928, included (1) till money and pocket money in the hands of the general public; (2) a certain amount of cash in the vaults of member and nonmember banks; (3) an unknown but probably small amount of money in hoards; (4) Federal reserve notes in circulation in Cuba, where they are legal tender, and United States money of any kind (except gold and silver) that may be in various foreign countries.

² Circulation Statement of United States Money, issued monthly by the Treasury for end-of-month dates. For a description of recent revision of this series, see the FEDERAL RESERVE BULLETIN for December, 1927, pp. 800-802. Comparable figures for the period 1914-1927 are given in Table 21 of the Annual Report of the Federal Reserve Board for 1927.

³ See table at the end of this article for weekly averages for 1927 and January to September, 1928. Current monthly averages of daily figures (also back figures for the period since 1923) are published on p. 691.

on each day of the week and the average change from the preceding day were as follows:

	Money in circulation	Change from preceding day
Sunday.....	\$4,908,000,000	-\$4,000,000
Monday.....	4,904,000,000	-25,000,000
Tuesday.....	4,879,000,000	-15,000,000
Wednesday.....	4,864,000,000	+15,000,000
Thursday.....	4,879,000,000	+23,000,000
Friday.....	4,902,000,000	+6,000,000
Saturday.....	4,908,000,000	

The last three days of the week bring an increasing demand for cash, evidently in anticipation of Saturday marketing and week-end expenditures, and, in some localities, for weekly pay-roll requirements, while at the beginning of the week cash begins to return to the banks, as merchants deposit their surplus till money.

The amount in circulation usually declines steadily until Wednesday. The average increase from Wednesday to Saturday in 1927 was about \$45,000,000.

Holidays.—Important changes in the demand for currency are occasioned by some of the holidays, such as Christmas, the Fourth of July, Labor Day, and Thanksgiving Day. The demand for money increases rapidly in the last week before Christmas. In 1927, when Christmas came on Sunday and Monday was also a holiday, the currency needs of a long week-end, combined with those for holiday shopping, added in one week \$100,000,000 to the amount of currency in use. Money in circulation increased about \$85,000,000 in the first two weeks in December, 1927, and then rose from \$5,077,000,000 on Saturday, Decem-

averaged about \$50,000,000 in the past five years, and the added demand over Memorial Day has ranged from about \$30,000,000 to about \$50,000,000.

Weekly averages of daily figures.—Because of the magnitude of the recurrent day-to-day fluctuations which have been described, including those connected with holidays, weekly averages of daily figures are a better record of changes in the volume of money in circulation than end-of-month figures, which in different months generally fall on different days of the week. Weekly averages of daily figures⁴ for the last three years are shown on Chart III (p. 686), and the actual figures for 1927 and 1928 are given in the table at the end of this article.

Seasonal movements of money in circulation.—Total volume of money in circulation shows the same general seasonal movements every year. Currency in use in the community is usually at its lowest point about the last week in July, increases thereafter until Christmas week, and then declines rapidly until the latter part of January. The increase from the latest full week in July to Christmas week during the last five years has varied between \$300,000,000 and \$437,000,000 and has averaged about \$370,000,000; in 1927 it was \$300,000,000; in 1926, \$340,000,000; in 1925, \$437,000,000; in 1924, \$424,000,000; and in 1923, \$357,000,000. Midsummer is the season of smallest demand for hand-to-hand money, largely because of the seasonal decline in factory pay rolls and in retail sales. The rise from the low point in July begins early in August, probably as a result of demands for money with which to pay wages in harvesting early cereal and fruit crops, to meet seasonally larger factory pay rolls, and possibly for use in summer travel. The requirements of the Labor Day week-end cause a peak early in September, after which only a part of the currency put into circulation for the holiday returns to the banks, because of seasonal growth in demand. This autumn growth in currency demand arises largely from wage outlays on farms, increased retail trade, and such other factors as the opening of schools. It is uninterrupted from the middle of September to another minor peak in the second week in October, at about the time that harvesting of many crops is completed. In the past five years this peak has been followed by a return flow of currency to the Treasury and the Federal reserve banks for about two weeks and then by a rise to another high point in the first or

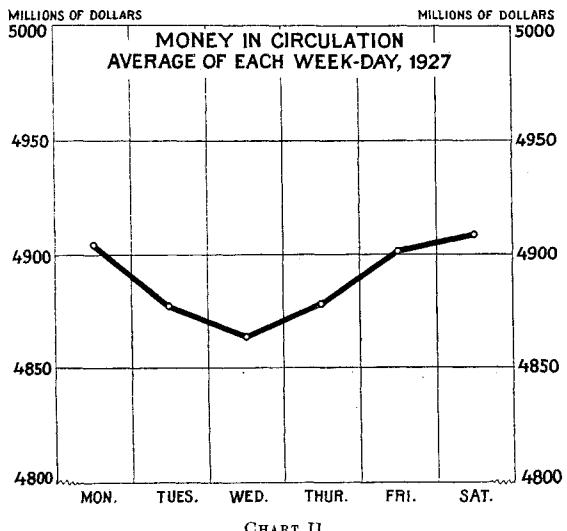

CHART II

ber 17, to \$5,177,000,000 one week later, on the last shopping day before Christmas. In the last week of the year money was returned rapidly to the banks which, in turn, deposited their excess cash with the Federal reserve banks, so that by Saturday, December 31, the circulation had declined by \$170,000,000.

The same general type of currency movement occurs around the Fourth of July and Labor Day, as shown for 1928 by Chart I. Money in circulation increased about \$100,000,000 in the week before the holiday on July 4 of this year, an increase only slightly smaller than in the two preceding years. Labor Day in 1928 added about \$50,000,000 to the usual currency demand, approximately the same amount as in previous years. The increased use of cash over Thanksgiving Day also has

⁴ Average of figures for the seven days Sunday to Saturday inclusive. Figure used for Sunday is that of preceding day.

second week in November. The demand for cash for making retail purchases at the Christmas season is the major factor in the rapid rise in money in circulation from the middle of November until Christmas week. Sales of department stores are ordinarily about 65 per cent above the average for the year in December, and other kinds of retail stores also have active business during the month.

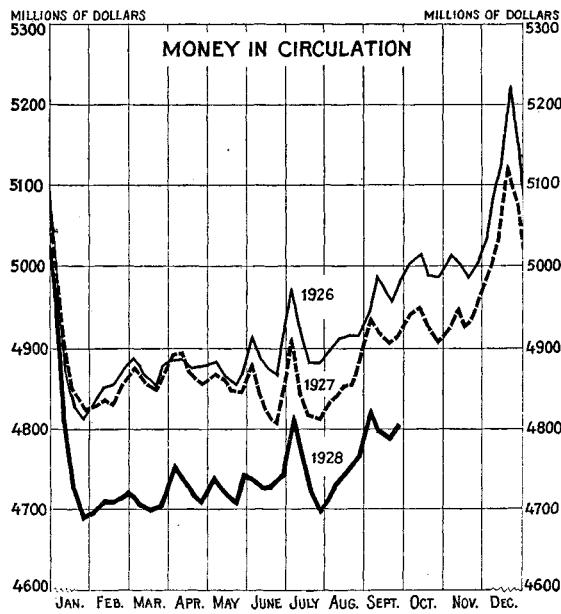

CHART III.—Weekly averages of daily figures (calendar week; 7 days ending Saturday)

After Christmas buying is over, money flows back in large volume to the Federal reserve banks until the end of January. The decline from Christmas week to the low level at the end of January has averaged \$400,000,000 in the last five years. From Christmas, 1927, to the last week in January, 1928, money in circulation decreased by \$430,000,000, as compared with \$398,000,000 for the corresponding period from December, 1926, to January, 1927; \$420,000,000 from December, 1925, to January, 1926; \$403,000,000 from December, 1924, to January, 1925; and \$354,000,000 from December, 1923, to January, 1924. Early in February manufacturing and retail trade has become more active, and the community's demand for

currency has increased by about \$75,000,000 from the low point at the end of January, and has then remained about the same until the middle of June except for short periods at Easter time and in the week of Memorial Day.

Recent course of money in circulation.—The seasonal increase in the demand for currency that usually begins shortly after midsummer occurred this year at about the same time as in 1927 and 1926—i. e., at the beginning of August. During August and September the increase, amounting to about \$110,000,000, was about the same as in the preceding year. This is brought out by Chart III, which shows the course of money in circulation in 1926, 1927, and 1928, with separate curves for each year. The chart also indicates that money in circulation, after having been about \$50,000,-000 less in the autumn of 1927 than in the autumn of 1926, increased by a smaller amount from the third week in November, 1927, to Christmas week than at the same season in 1926, so that at the time of the Christmas peak in 1927 there was about \$100,000,000 less money in circulation than in the corresponding week of 1926. Furthermore, the decrease from that time to the last week in January, \$430,000,000, was considerably greater than in either of the two preceding years, so that the amount of money in circulation at that time was at a level more than \$130,000,000 below that of the same week last year and at the lowest point in more than six years. The decline continued until the middle of April, when the circulation was below that of the corresponding week in 1927 by about \$160,000,000. From that time, however, money began to return to circulation in substantial volume, and during the first three weeks in July currency in use was less than \$100,000,000 below the level of the same period a year ago. Some of this increase was offset, however, during August and September, which may be partly attributable to the fact that the harvesting of crops in some sections has been later than it was last year. At the present time, the volume of money in circulation continues to be relatively low for this season of the year—nearly \$175,000,000 lower than in 1926, over \$110,000,000 lower than a year ago, and more than \$60,000,000 lower than in any year since 1922.

A decrease from one year to another of as much as \$100,000,000 in the volume of money in circulation is an unusual occurrence, especially in periods like the last two years when industry and trade have been relatively active. The reasons for the decline from 1926 to 1927 and 1928 are not altogether clear. It is probable, however, that the course of factory pay rolls was a factor of importance. Factory pay rolls were declining in general during the period of decreasing demand for currency, especially from October, 1927, to April, 1928, when the Board's index was materially lower than in the corresponding month in the preceding year. The course of retail trade might be expected to have been a factor in the decrease in currency demand, and the Federal

Reserve Board's index of department-store sales adjusted for seasonal variations did in fact decline during the month from last December to last January, but since that time the index has been at about the same level as in the corresponding months of 1926 and 1927. It is possible that American currency has returned from circulation in Cuba as a result of trade depression in the island, or from European countries which during the period of unstable monetary conditions had been using American currency received from the United States in earlier years and began to return it after their own currencies had been stabilized.

The following table gives the volume of money in circulation, by weeks, during 1927 and January-September, 1928:

NATIONAL SUMMARY OF BUSINESS CONDITIONS

Volume of industrial and trade activity increased in August, and there was a further advance in wholesale commodity prices. Reserve bank credit outstanding increased in September, reflecting in part seasonal demands for currency and credit. Money rates remained firm.

Production.—Production of both manufactures and minerals increased considerably in August, the output of manufacturing plants being larger than at this season of any earlier year. Automobile production was in record volume in August, and available information indicates that output was maintained by many producers at a high level during September. Iron and steel production continued large in August and September, and output of nonferrous metals increased between July and August. Textile mill activity, which had been somewhat reduced in recent months, also showed a substantial increase. Factory employment and pay rolls have increased since midsummer and in August were close to the levels of a year ago. In the building industry there was evidence of recession in a sharp decline after the early summer in contracts awarded, which were in smaller volume during August than in the corresponding month of any year since 1924. In the first three weeks of September, however, awards were somewhat larger than last year.

Estimates of the Department of Agriculture for September 1 indicate that yields of principal crops will be larger than last year and above the average for the preceding five years.

Trade.—Distribution of commodities showed seasonal increases in August, although sales in most lines of wholesale and retail trade did not equal the unusually large sales of August, 1927. Department-store stocks increased, as is usual in August, but continued smaller than a year ago, while inventories in several lines of wholesale trade were somewhat larger than last year.

Freight-car loadings were in about the same volume in August as a year earlier. Shipments of miscellaneous commodities and grains were larger and those of coal, livestock, and forest products smaller than last year.

Prices.—The general level of commodity prices increased in August, and the Bureau of Labor Statistics index, at 98.9 per cent of the 1926 average, was the highest in nearly two years. Increases in August were chiefly in the prices of livestock and livestock products, which are now higher than at any time since 1920. There were also small increases in fuels, metals, and building materials. Grains and cotton showed sharp declines, and there were decreases also in hides and skins and wool. Since the 1st of September there have been some declines in livestock and meats, and a sharp further decrease in cotton, while prices of pig iron, copper, and petroleum have advanced.

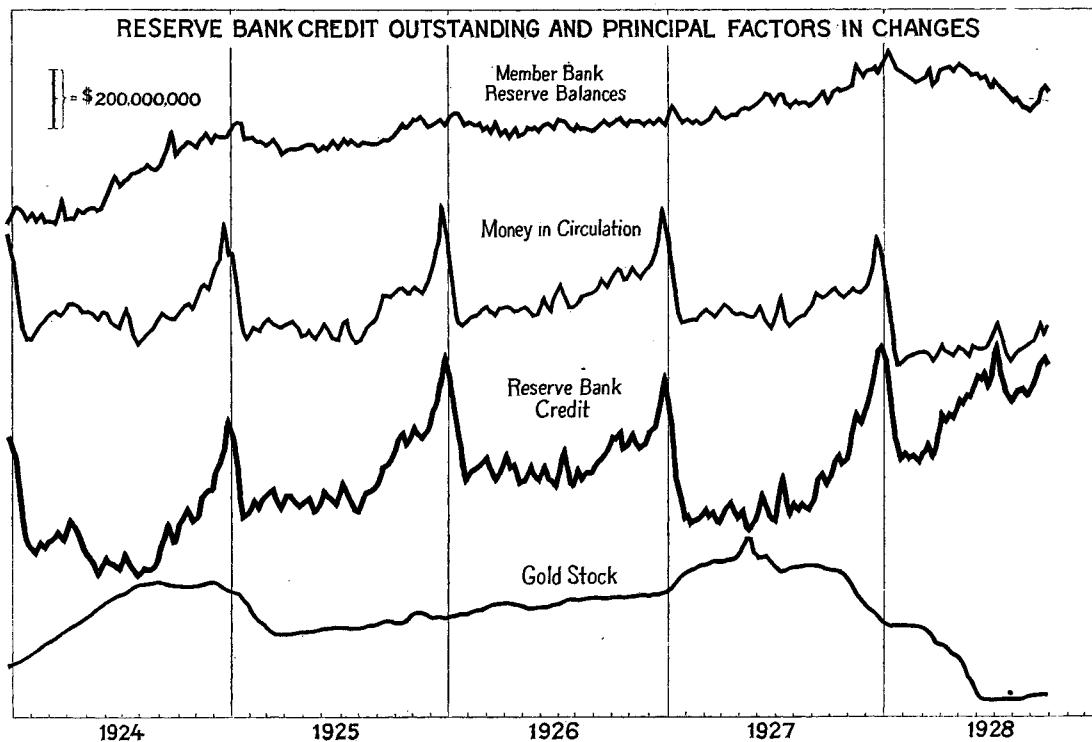

Bank credit.—Between the middle of August and the middle of September there was a considerable increase in the loans and investments of member banks in leading cities. Part of the increase was in loans on securities and part reflected a seasonal increase in other loans. Deposits of the member banks also increased during the period.

Volume of reserve bank credit outstanding increased during the four weeks ending September 19 in response to seasonal demands for currency and growth in member bank reserve requirements. The increase in total bills and securities was largely in holdings of acceptances and in discounts for member banks.

During the same period there were further increases in open-market rates on collateral loans and on commercial paper, while rates on bankers' acceptances were reduced from $4\frac{5}{8}$ per cent to $4\frac{1}{2}$ per cent.

NOTE.—Charts and tables giving figures upon the basis of which the foregoing summary was prepared are given on pages following.

RESERVE BANK CREDIT

*Revised.

NOTE.—These tables contain, for certain months, index numbers of industrial production, together with group indexes for important components. The combined index of industrial production is computed from figures for 60 statistical series, 52 of manufactures, and 8 of minerals. Adjustments have been made in the different industries for the varying number of working days in each month and for customary seasonal variations, and the individual products and industries have been weighted in accordance with their relative importance. The sources of data and methods of construction were described and monthly indexes for the above groups were published in the BULLETIN for February and March, 1927.

PRODUCTION OF MANUFACTURES, BY INDIVIDUAL LINES

	August, 1928	July, 1928	August, 1927			August, 1928	July, 1928	August, 1927

NOTE.—This table contains for certain months general index numbers of employment and pay rolls, together with group indexes for important industrial components. The general index is a weighted average of relatives for 34 individual industries. The method of construction was described in detail and indexes for the above groups since January, 1919, were published in the BULLETIN for May, 1925. See also p. 668 of BULLETIN for September 1925, for certain revisions.

¹ Based on noon buying rates for cable transfers in New York as certified to the Treasury by the Federal Reserve Bank of New York, in pursuance of the provisions of sec. 522 of the tariff act of 1922. For back figures see BULLETIN for January, 1928, pp. 56-62.² Effective June 25, 1928.³ Averages based on daily quotations of closing rates as published by New York Journal of Commerce.⁴ Nominal.⁵ Silver currency. Parity represents gold value of unit in 1913 computed by multiplying silver content of unit by New York average price of silver for 1913. This average price was \$0.61241 per fine ounce, which compares with an average price of \$0.57849 for September, 1928, \$0.59191 for August, 1928, and \$0.55757 for September, 1927. The corresponding London prices (converted at average rate of exchange) were \$0.57758, \$0.59239, and \$0.55988.

¹ New index—1926=100.² First of month figures.³ New official index.⁴ Revised.

NOTE.—These indexes are in most cases published here on their original bases, usually 1913 or 1914, as determined by the various foreign statistical offices which compile the index numbers and furnish them to the Federal Reserve Board. In several cases, however, viz., France, Netherlands, Japan, New Zealand, and South Africa, they have been computed from original bases (1901-1910; 1910-1910; October, 1900; 1909-1913; 1910) to a 1913 base. Index numbers of commodity groups for most of the countries are also available in the office of the Division of Research and Statistics and may be had upon request. Further information as to base periods, sources, numbers of commodities, and the period of the month to which the figures refer may be found on pages 769-770 of the BULLETIN for November, 1927.
